FYI - for anyone who has sent money and payed for the program, but have
not gotten what they payed for... if you use www.dejanews.com and do a
search from the old archives for "wintone serial" you will probably find
the info that you need. People are always posting sernos for software,
and DejaNews is nice enough to keep them around for anyone who wants them.

(Of course, if you didn't pay the fee - don't use the serno. :)

Let me explain something here. For one thing if anyone feels that Bill Gates has worked and created his success, you need to backup what you say. For one thing coming from a long time computer engineer, and someone who has used several types of OS's, Microsofts concepts used today are all takeoffs on other OS's. For anyone who feels that Windows had the first multi tasking enviroment...think again. And the new file system microsoft is talking about, HPFS,

is
old as the hills. They just now are implanting it. Microsoft isnt smart, they are just progressive to the ignorent computer user. Linux, OS2, Unix, Solaris, and others are far more
superior to Windows. The only problem is that people are lazy. Windows is for the ignorent fool. It has no creativeness to it. All it is a bunch of ideas that been created a long time
ago thrown together so people can play with their computer without thinking. For anyone who says there isnt any support for other OS's, you should get a bull**** sensor, becuase everything
that is made for microsoft windows has an exact for similar product made for all other OS's.
The computer stores are linked with Microsoft, thats why you dont see other products. Microsoft
has done an execellent job on helping the public experience the pc. But dont think Microsoft is
some tech-breaking company. They arent. They are plainly spoken:"imitation applied to simplicity."

Marc

4. Re: Icom PCR-1000 Commands: The List So Far

Newsgroup: rec.radio.scanner
Date: 1998-01-01 00:00:00 UTC
From: jnm@ibm.net
Message-ID: <34abd5ba.0@news1.ibm.net>
Source record: 175328

I haven't been keeping up with general coverage receivers for quite a while, but while surfing the net, I ran across the PCR-1000 and it sure grabbed my interest.

How well does this radio do as a general coverage receiver? Does the software enable it to do scanning at a reasonable rate as well?

Found it offered somewhere at $499. Is that the best price available?

Would love to hear comments pro/con about this radio system before I invest...

John

Hi Jay,

If it really is digital, then it's probably very secure from
being heard by anyone with a scanner. However, like most cordless
phones, it probably has a Test Mode. If someone near by has the
same type of phone, they could pick up your conversation if they
managed to get their phone into Test Mode. I'm not sure if this
hold true of 900 Mhz Spread Spectrum Cordless Phones.

Does the documentation make any mention of Spread Spectrum?

Bob

I've got an AOR 8000 which has been gathering dust on the credenza behind my desk. I am thinking of getting one of those new ICOM PCR-1000 systems since I spend so much time on the computer and all I really need is a general coverage receiver anyway.

I am willing to part with this immaulate AOR 8000 for $350. It was purchased from Javiation a couple of years ago. Has rarely been taken out of my office. Original box and in perfect working order. Also included is an RS-232 interface box. I even bought a spare battery cover for the radio so I could put a small slit in one cover for use when connecting the ribbon cable to the RS-232 box. This radio is in perfect order.

Also considering selling my Standard C558A handheld which gets almost no use... Hmmmm... I've got almost $700 invested, but would let it go for $400.... Has the extra channel add-on, and an extra battery pack case for using regular AAAs as well as the Standard nicad pak. Also includes the Standard CSS240 desk charger stand.

9. Rep Tauzen to force FCC reorganization

Newsgroup: rec.radio.scanner
Date: 1998-01-01 00:00:00 UTC
From: Greg Dean <n9nwo@gte.net>
Message-ID: <68gme3$e7b$1@gte1.gte.net>
Source record: 175333
Cross-posted to: rec.radio.amateur.policy,rec.radio.scanner,rec.radio.shortwave,alt.radio.scanner,alt.rush-limbaugh,alt.fan.rush-limbaugh,alt.fan.g-gordon-liddy

This is from the 26 Dec 97 Amateur Radio Newsline. Thought you folks might be interested.

Congress To Force FCC Reorganization

The future of amateur radio could lie with a single man in Washington. He's not an FCC official, but he could have powerful influence over how the Commission operates in years to come.

In two years, the FCC could be an entirely different agency from what hams and others know it to be today. That's the vision U.S. Representative Billy Tauzen has, and as head of the powerful House Telecommunications Subcommittee, Tauzen could make it happen.

The Louisiana Republican lawmaker came to prominence earlier this year when his subcommittee proposed legislation essentially banning scanner radios. In an interview in the broadcast trade publication Radio World, Tauzen says it's time to do away with the old and bring in new ideas at the Commission. Tauzen indicates he'll give the FCC a choice. Either reorganize on its own, or his committee will look into doing it for the agency.

As Tauzen sees it, the Commission's main problem is that it's organized around a 1930 government model promoting heavy federal regulation and monopolies to protect consumers.

But Tauzen says this is a different age. One of government opening up the marketplace to fierce competition and letting consumers be in charge. But Tauzen feels that the FCC still thinks and reacts the old way.

Tauzen's comments seem to suggest that the Commission may be in for another round of downsizing... or perhaps even more deregulation. With Tauzen leading the push, Congress could even take the FCC out of the business of regulating the airwaves, perhaps making the agency function as a spectrum landlord instead.

What effect all this could have on the amateur radio service is unclear. This is a time, though, when other services pressure the Commission for more freedom. At the same time, radio amateurs ask the FCC to hold back the hands of time. Hams ask for more rules instead of fewer. They demand stricter enforcement. And they sometimes indicate that they prefer older as opposed to newer technology.

What will the next generation FCC say to all of this? Those answers will evolve only as the shape of the new FCC becomes clearer.

The first steps toward reshaping the FCC could take place soon. Tauzen says if the Commission does not take steps toward self-reorganization, his subcommittee may begin work on its own during the 1998 Congressional session.

(Via Radio World Magazine)

<*>

I would go one farther. Seperate enforcement from regulatory power. Instead of 17 law enforcement agencies (within regulatory agencies), we only need 3: Secret Service, Marshalls/FBI and DOD.

Secret Service, in addition to protecting individual government officials and the treasury, should enforce tax law. Taxes cover the IRS, Customs and excise taxes (guns, tobacco, alcohol). Also any licensing violation (FCC, FAA, SEC, etc).

Merge the US Marshalls Service with the FBI (it will be the CID of the marshalls). Also merge in DEA, Forest service and Parks enforcement. Let the Marshalls protect property.

DOD would enforce law from the borders out. That means merging the Border Patrol into the US Army (there civil servant law enforcement within DOD already). Merge CIA into DOD as well.

Does anyone have any information about how well these new
Optoelectronics Techtoyz Micro-counters work? If you have any info
please e-mail me at joshuap@home.com
If you haven't seen them yet there at
http://www.optoelectronics.com/techtoyzmenu.htm
Thanks,
JOSHUA

23. ICOM Receivers R8500 R10 PCR1000 FS

Newsgroup: rec.radio.scanner
Date: 1998-01-01 00:00:00 UTC
From: Steve@swssec.com
Message-ID: <34adee4c.34052199@news2.ibm.net>
Source record: 175347

Hello list entities,

For a while we are offering *NEW* ICOM R8500 receivers, in sealed boxes with all accessories and a TWO year warranty, for $1625 plus UPS. Further discount on two or more units. Current production, no strings attached, just passing low prices from huge volume to all.

Other dealers offer only the factory one year warranty. We service in house. Only condition for free extended warranty is no mods performed and no one else attempts service.

These are current production receivers, not early production early serial numbers with problems that we are trying to unload on unsuspecting buyers.

Cellular unblocked to authorized users, unfortunately blocked only to the rest of us without titles of nobility.

Our website has photos of the R8500 being used in several surveillance listening posts around the world. Go to the What's New section, then hit the photo gallery "A Day in the Life".

Similar deal on R10's. Price $450 + UPS.

Government or authorized users email or call for the lowest price on R9000 in eleven years. No private sales on R9000.

PCR1000 for $489 + UPS.

We can take your check over the phone for the extra 2% the bank charges us, or credit cards at no premium starting in January. Orders prepaid only at these prices.

No tax on mail order sales in any state.

We may accept trades of other ICOM receivers (only) towards the above. Email to inquire. To be honest though you will get a better price selling to others than we can offer on a trade.

We are ICOM dealer #6307, selling ICOM back when the company was called Inoue Communications, and one of the few facilities who services in house. We sell and service commercial ICOM equipment only, no amateur, no other brand. We've sold several hundred receivers on these newsgroups, so plenty of history on us if inquiring minds need to know.

Your new toy for 1998.

Regards to all ..... Steve

> computer engineer, and someone who has used several types of OS's,
> Microsofts concepts used today are all takeoffs on other OS's.

So are other OS's. So are planes, trains, and automobiles.
The present state of the knowledge of Mankind is a summation
of all the bits of knowledge of the past. You think Wilbur and
Orville Wright invented the airplane? Think again. Leonardo
Da Vinci had a model 500 years before that would have worked,
had he possessed a power mechanism. And I doubt he pulled his
model outa his sweet patooty......

> For anyone who feels that Windows had the first multi
> tasking enviroment...think again.

Who said that? And who cares?

> And the new file system microsoft is talking about, HPFS, is
> old as the hills. They just now are implanting it.

Not completely correct. HPFS is a Microsoft innovation from the
days when it owned and developed OS/2. HPFS is as old as the
hills, though....and has given way to NTFS. Except OS/2 still
clings to HPFS like stink clings to shit. And FAT16 is giving
way to FAT32.

But so what? Who cares?

> Microsoft isnt smart,

As one who has many connections into Microsoft, I'll concede
that the inanimate company definitely isn't "smart". However, its
people are well represented with some of the finest minds on
the planet.

> they are just progressive to the ignorent computer user.

Now is that a fact? You....who can't SPELL "ignorant" are
spouting *facts* here? Ooooooohhhh, do you have any more
"facts"?

> Linux, OS2, Unix, Solaris, and others are far more superior to Windows.

If that were true, then "Linux, OS2, Unix, Solaris, and others" would
rule the planet in terms of installed and functional operating systems.
They don't rule. They simply have their place.

> The only problem is that people are lazy.

No....that is not the ONLY problem.

> Windows is for the ignorent fool.

There you go showing *your* ignorance, that's for sure!
Learn how to spell the word before accusing others of it.

Meanwhile, Windows *is* for those who want to get something
done besides stare at a pretty Workplace Shell or a funky
log-on screen. Windows most assuredly is a production environment
where people who have things to do can get things done.

> It has no creativeness to it.

You're right. Windows is an inanimate "thing". It is only
as creative as the guy behind the wheel.... 'er, keyboard.

> All it is a bunch of ideas that been created a long time
> ago thrown together so people can play with their computer
> without thinking.

.....without thinking about file systems, security, obscure
commands, and without having to be an expert keyboardist....
so people can BE creative and not have to continuously wrestle
with the "operating system". Windows brought personal computing
to THE PEOPLE......like Henry Ford brought automobiles to
THE PEOPLE.

> For anyone who says there isnt any support for other OS's,

Who cares? Go get support for "other OS's" all you want.
That will be fine and dandy.....while the rest of humanity
just plumb doesn't give a whit one way or the other. You
can waste your time sniveling and whining while other people
get their work done. Howzzat?

> becuase everything that is made for microsoft windows has an
> exact for similar product made for all other OS's.

Oh, izzat so? Cool. How's come people don't use 'em?
Or even want 'em? How's come all this "other stuff"
doesn't even get advertised in the magazines and on TV?

> The computer stores are linked with Microsoft, thats why
> you dont see other products.

Nooooo......stores only line up what will sell. If it won't
sell, then they don't carry it. THAT is the sole and singular

aspect that pertains to what is carried on the store shelves.
CompUSA and ComputerCity don't give a flying hoot about the
brand name unless it sells.

> Microsoft has done an execellent job on helping the public
> experience the pc. But dont think Microsoft is some tech-breaking
> company. They arent.

Oh yes they are, Just like Chevrolet, Ford, Chrysler, Colt,
Remington, Winchester, Smith & Wesson, DuPont, and Dow.

> They are plainly spoken:"imitation applied to simplicity."

So is the rest of humanity. Inventions are a sum of all
inventions of the past. The big breakthroughs are rare and
few nowadays. So what?

Try your OS-zealotry and Microsoft-hate campaigns somewhere
else where people give a hoot....like maybe COMP.GIVE.A.HOOT
You're more'n likely to getlaughed at here in this forum where
we're a mix of all sorts of hardware and software platforms
and where radio is our common bond.

Happy sniveling!

from Internet Atlanta thoughtfully posted:

>
> OK, I have a question for you scanner-heads out there. Would
> people be interested in a program similar to TRUNKER that runs under
> Windows?

Or as a TSR? So that the PC could do other things, too?

Instead of relying on a PC, can some one crunch some code for a
PIC? (Or COP8? :^) A BS2 may be too slow.

I would think a small "black box" that converted the datastream
into a serial control stream would be *Much* more convenient.

It could be small enough to carry along with your portable (or
even mount *inside*), making any "controllable" portable
"trunk-capable". No laptop needed!

In fact, could someone convert the code for the MDT decoder?
Datastream in and 9600 baud serial out - You could use any OS
(Mac,PC,UNIX,LYNIX), even a HP48, Palmtops or a Pilot.

Unfortunately, I am not a "Code Jockey", and this is *way* above
my current programming skills at this time.

We seem to have some very proficient programmers out there, it
should be easy for them to do this conversion. The bulk of the
code is already available.

Wouldn't it be nice to have a "software upgradable"
trunk-tracking scanner?

Cheers,
Paul Grohe

> > me and AOL.
>
> OK, what do you want to say about it?

The ball is in your court. I already said something
about it. You lost the train of thought, numbnuts.

> > Otherwise, you are going back on my Shit List. You're
> > a damned fool idiot and it's impossible to hold a train
> > of thought with you and your shitferbrains.
>
> Unfortunately, this is the only way you know of to
> deal with others.

Imbeciles, shitheads, idiots, nincompoops, and nitwits, yes.
But those kind do not count as "others"....like you don't
count. You are absolutely and utterly worthless. You are
only very funny, that's all. Kind of like a court jester.
You are kind of entertaining. And free, too.

> I have NOT cussed you or called you names is this thread
> at any point yet you carry on as above for no reason.

That's only because you know I don't care. You jumped
onto that AOL thing like stink on shit because you perceived
it as TRUTH and catching me in a lie. You're desperately
groveling and scouring the gutters of the earth to find
something on me. Best you're going to do is find a piece
of mistletoe attached to my shirttail.

Calling me names doesn't work on me like it does on you, Bucky.
But you haven't done anything else either....other than mess
your pants and call people liars.

> Now who's the idiot?

You continue to be on a par with the common urinary ant
in terms of intelligence. You are in a very real sort of
way, just our cute little village idiot.

> As said before, you have no real facts to defend yourself
> with or to attack me with. So, you resort to name calling,
> cussing, & story making.

It is not possible to deal with you on "facts". You call
people liars and fools when they confront you with the facts.
So.....it makes more sense to talk about your squaw and your
bedwetting kids and that looney tunes hospital where you change
bedpans..... and since people shit in bedpans, that may as well
be mentioned, too.

I don't call you anything you're not, Macksie-baby. And the
stories....well, hey....it's more fun to laugh at you than
to pity you.

> > No more swipes, Mongrel Mackey, just as soon as YOU stop.
>
> As soon as you change your attitude, it will stop.

Ahhhhhhhh, I seeeeee! And you are the annointed judge of
my attitude, I take it?

Heh heh heh heh.....you done *got* some of my attitude planted
on the seat of your sorry britches when I kicked your ass off
the Fidonet echo.....and it STILL smarts, doesn't it?

<giggle>

You just can't imagine the glee and joy I derive from knowing
how it STILL sticks in your craw, Mackey. heh heh heh..... here
it is two years later and you're still sore about it. ha ha ha ha!

> You have done unprovoked attacks on me & others many times.

No,Macksie, I *never* do unprovoked attacks on you. I
always let you strike first a couple or three times
before I frap your lips.

> Ok Bill, here it is below. Look at the areas with "^^^^^" under them.
> (Read it & WEEP at the TRUTH, SON!)

> >..... until a certain absolute FOOL who's initials are JMackey gets
>

> > ForPersonal Gain"! ;-)

No, you miserable wretch, I didn't write THAT. I quoted it
from someone else who originated it.

> <ROTFLMFAO><suffering paroxysms of uncontrollable mirth>

Yes.....I did laugh. I laugh at you all the time, Macksie.
You wouldn't believe the laughter and mirth that goes on
around here in the shop that you cause, Wingnut!

> Actually, it will be a race to see who can do it first, Mongrel Monkey
> Mackey or his Auntie Quarnstrom..... <giggling some more>

And yes, I wrote that. But what makes you think I was
talking about YOU? Are you the real "Mongrel Monkey Mackey"
And is Auntie Quarnstrom your real aunt?

My oh my, how *offended* we are, huh? Guilty conscience?

I just love knowing how I stick in your craw, Sweets.
Know what I mean?

<giggling unmercifully>

I tried to go there earlier today from a college with its own T1 connection.
I tried the URL all the way back to just .../lblant1/ and got "404 not
found" from the airmail.net server. Are you sure that's your URL?

32. Cellular RX on Yaesu FT-50R with no mods

Newsgroup: rec.radio.scanner
Date: 1998-01-01 00:00:00 UTC
From: abtownes@hotmail.com
Message-ID: <883688921.1407975433@dejanews.com>
Source record: 175356
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner

There have been various ways posted here to achieve cellular reception on the Yaesu FT-50R. These include hardware changes requiring careful disassembly and soldering, as well as software-only changes using a hex editor on the ADMS files according to instructions provided by Ingra-Beton.

There have also been instructions posted here for getting this Yaesu to scan in steps needed for the cellular band plan. 30 KHz steps would be ideal, but the Yaesu offers only 15 KHz steps, and withholds even those in UHF. A couple of postings here explained how to store a VHF freq set up with 15 KHz steps and then recall it and change the freq to the bottom of the cellular UHF band, and store it again. This keeps the 15 KHz step size, even though it is for a freq range where the Yaesu does not offer it. It was not actually necessary to store the VHF freq, but this is a confusing procedure, and I give credit to its inventor even if he did more steps than necessary.

It was also suggested in postings here that one can program a repeater offset of minus 45 MHz, to be stored with the 15 KHz split. (and turn off ARS, function 5.) With this set up, one can hear a base station which may or may not repeat the mobile, and with a single keystroke, switch to the mobile frequency. It takes a good antenna, but you might actually hear the mobile.

It is the main purpose of this posting to show that (1) neither the hardware nor the hex-edit mods are necessary for cellular reception, and that (2) the tricks needed to enable the 15 KHz steps (very tricky) and the 45 MHz offset can be done much more easily, and done only once, directly in the ADMS software.

The Yaesu FT-50R has the interesting property that it can get cellular reception on images both above and below the desired frequency (for example, 870 MHz, which is locked out). The first IF is 45.1 MHz. Thus we should look for cell images on 960.2 MHz and on 779.8 MHz. I turns out that both exist. This may seem illogical, but all it means is that when we tune to 960.2, the HF oscillator is 45.1 MHz below that, and when we tune to 779.8 MHz, the oscillator is 45.1 MHz above that. In both cases, we would hear a signal that was transmitted on 870. Nothing weird, we just got lucky that they did it this way. From my experience listening to this in Canada where it is legal, the Yaesu appears to have no image rejection in this freq. range, that is, no input filtering. Thus, it gets cellular reception on 960.2 as well as it would if you freebanded the set and tuned to 870. The 960 image is the better of the image choices because the Yaesu automatically uses the NFM detector in

that range. If you listen in the 789 range, you must turn off the RMOD (function 31) that wants to use the WFM detector. After all, this is in the UHF TV range. You might also run into a real UHF TV station there.

If anyone has freebanded an FT-50R, let me know how you think the 960 reception compares to the 870 reception and confirm what I found.

Since all serious users of the FT-50R have the ADMS software, I give you here the procedure for programming the cell range in ADMS with the two trick features. If you do not have it, get the ADMS 1-D now. It covers all the radios that the 1-c covers and them some. It also introduces copy protection, but this has already been cracked.

Load ADMS. Select a range memory from the data list, say L1. Go to the Edit screen. Put in 145 MHz as receive freq. Select step size of 15 KHz. Type in 45.000 for TX Shift. Change the 145 MHz to 961.1 MHz. The 15 KHz remains. Select the negative offset under the 961.100. You might have to go back and forth between + and - offsets a few times, but you can get it to bring up 916.100 MHz for transmit. Type in "CELL" in the Alpha Display and check Show. Or find a cute covert four-letter label. Do OK. Now Edit U1. All the same, but finish up with 973.1 MHz in receive. Do OK. Then, in the main ADMS screen, uncheck Automatic Repeated Shift. Otherwise there will be no 45 MHz offset when the scan leaves the limit edges. Also pick Scan Resume to be "Signal Drop". "5-Seconds" is a crazy mode of no use ever. It should be called Search and Sample. Save the file and load it to the Yaesu-50R.

Scanning cellular is now as simple as recalling L1, tapping key-MR, and holding key-VFO for a few seconds. The Yaesu rescans the range when it reaches the upper limit. As you edit your freq. list over the years, this range need not be changed.

The display shows that all of this works fine with tha antenna jack shorted. I cannot wait to visit Canada to try it for real.

The 961.1 MHz setting is a carefully chosen freq. It is near the bottom of the base-station band, but above the data channels, and is divisible by 30 KHz with a remainder of 20 KHz. This is important because of the IF. If you chose to change it to include more range or whatever, consider the above requirement.

To program a freebanded Yaesu, use 870.900 and 882.900 as the limits. These are divisible by 30 KHz with zero remainder, also important. As I have not tried this, please confirm that it works as I expect.

Wishing everyone happy scanning when visiting a place where it is all legal,

Al

>> info will be appreciated.

Percon's free online search is nice, but it won't allow anyone to get on and download a bunch of frequencies.

The NF2G Scannist Pages are being redesigned and will soon have much more in-depth information than is presently online, but in the meantime you can find primary frequencies there. The URL for Albany County is: http://www.ggw.org/nf2g/ny_alba.html

Enjoy.

DON'T use RG-6! Use 50 ohm cable. Scanners use 50 ohm cable, not 75 ohm.
I would recommend RG-8, or barring that, RG-58, but make sure it's 50 ohm

Chris, do you remove your scanner from its power source when not in use? I've found that mine would lose its memory when powered off for a period of time (sometimes just overnight). A couple of items come to mind:

The third wire in back (orange, if I remember correctly) is supposed to power the memory. Since I use mine indoors and don't leave it hooked up to the power supply constantly, I hook this wire to a 9-volt battery. Problem solved.

Also, I remember someone mentioning in this newsgroup that the memory capacitor in the PRO-2026 can be replaced with a larger one. I'll look in my notes and post the specifics later.

By the way... Do you use yours in your car most of the time?

Hope this helps.

I don't understand all the anti-Bill Cheek stuff that I've been reading in the newsgroups and Fido-groups for years now.

The guy is the one who brought us modifications and other neat stuff to the world of scanning. Can't listen to cell phones on your 800 MHz scanner? Bill Cheek found a way how. Want computer control? He can show you. Shit, he only wrote 3 books on scanner mods and had developed associated hardware, etc...

Sure, he's opinionated, but who cares? He's brutally honest and knows his shit. He's only advancing the hobby for all of us.

I bought my wife a PRO-70 50 Channel Radio Shack scanner for X-MAS. Being that we are both new to these things, we need to know what 10-36 or 10-29 etc....means. Is there some place that I can downlaod these. or could someone E-MAIL me a document with these on them. We live in ELKHART IN and could use some other frequencies to program into our scanner. So far we have only 10. I would love to have airplane freq as well. Any help would be greatly appreciated.
MJAUGER@AOL.COM HAPPY NEW YEAR !

>
>

Nonsense!!! RG-6 is fine for scanner antennas as long as it's under about 100 feet. Look at the loss figures, RG-58 is the absolute worst recommendation for anything above 30 MHz! I wouldn't use RG-58 for ten feet at 800 MHz!

I use Times Wire & Cable LMR-400 (50 ohm) cable, it has loss figures comparable to Belden 9913 but is easier to work with.

It doesn't take a rocket scientist to realize 50 ohms is a nominal figure. Ohms Law says that reactance varies with frequency, at 40 Mhz it might be 20 ohms, at 800 Mhz it might be 200 ohms for example. Any mismatch loss from RG-6 is miniscule compared to the signal loss using RG-58.

To make the point, my Butternut HF6V antenna uses a piece of RG-59 75 ohm cable (1/4 wave, 20 Meters) at the end of the 50 ohm run as a matching transformer for the 20M band. Gasp! A piece of 75 ohm cable in line with my 50 ohm ham rig!

So, at what point is the antenna and feedpoint 50 ohms? Depends on the frequency, and that's the resonant frequency.

Use that RG-6, or 9914! Both are 75 ohms! 9913 and LMR-400 are 50 ohms, so what?

Happy New Year,

Jon Van Allen, KF7YN

If my memory serves me correctly, it is not yet illegal to own or posess
a device which can decode paging data. I am aware of pending
legislation on the subject, but again, to my knowledge nothing has been
passed.

I believe those who have charges brought against them are penalized for
the act of devulging the information they receive as opposed to the act
of interception.

I have seen that philosophy imposed in the past. But I
don't think it applies here. For one thing, the "blob"
covers only a string of resistors, but not the CPU nor
any other really crucial area.

This string of resistors is more or less the area where
hackers have invaded in the past to liberate cellular and
other goodies. In this case, there is nothing to hack in
that spot and covering the resistors accomplishes little
of absolutely nothing.

So the reason is elusive, to put it mildly. There just
isn't anything to hide there. But it looks like it....

RG-6 is 75 ohm cable and about the lowest loss of
all routinely available cables. The next step up
of any significance is Belden 9913, and above
that, heliax or hardline.

You won't be handicapped if you use RG-6 unless the
length is excessive, say over a hundred feet.

Although this group has nothing to with Microsoft (thank God), I just needed to take this opportunity to vent a bit.

Tried to get on-line support from Microsoft. I got tired of waiting three minutes for each page to download, plus I was stuck in a loop. Yes, I'm using their browser (ie 4.0), their operating system (Windoze 95) and their websight (Microsoft.com).

If they weren't so dead set about taking over the world, it might just be comical. Maybe Bill Gates got his first job at a Radio Shack?

57. PCR-1000: Full coverage mod (for free)

Newsgroup: rec.radio.scanner
Date: 1998-01-01 00:00:00 UTC
From: jcwren@atlanta.com
Message-ID: <34ef22f2.974811765@nntp.atlanta.com>
Source record: 175381
Cross-posted to: alt.radio.scanner,rec.radio.amateur.misc,rec.radio.scanner

You've been waiting.

You've been told it can't be done.

You don't want to pay for it.

Here's how you do it.

The PCR-1000 full coverage mod:

What you'll need:
Small philips screwdriver
Slightly larger philips screwdriver
Soldering iron with *very* fine tip
Xacto knife, or other sharp tool
2 0-ohm surface mount resistors, 0804 in size, or
30 guage wire-wrap wire
No fear of surface mount components
Ability to follow instructions

Very very very first step. Read ALL the steps before
starting. Make sure you feel comfortable making a mod of this nature.
It's not rocket science, but it does require a steady hand.

There are three things that can happen as a result of this
mod. 1) You're completely successful. 2) You screw up a surface
mount pad, but the radio still works when you're done. 3) You're a
total hack using the wrong tools, and you send the radio back to Icom
for repair.

Hopefully, you're a result 1 type person. At worst, you're a
result 2. If you think your going to be a result 3 type, don't even
start. Call a friend.

We've done this mod on 2 radios with complete success. We
can't guarantee that in later radios this mod will still work. It
works at least with serial numbers up to 1111 in the last 4 digits.

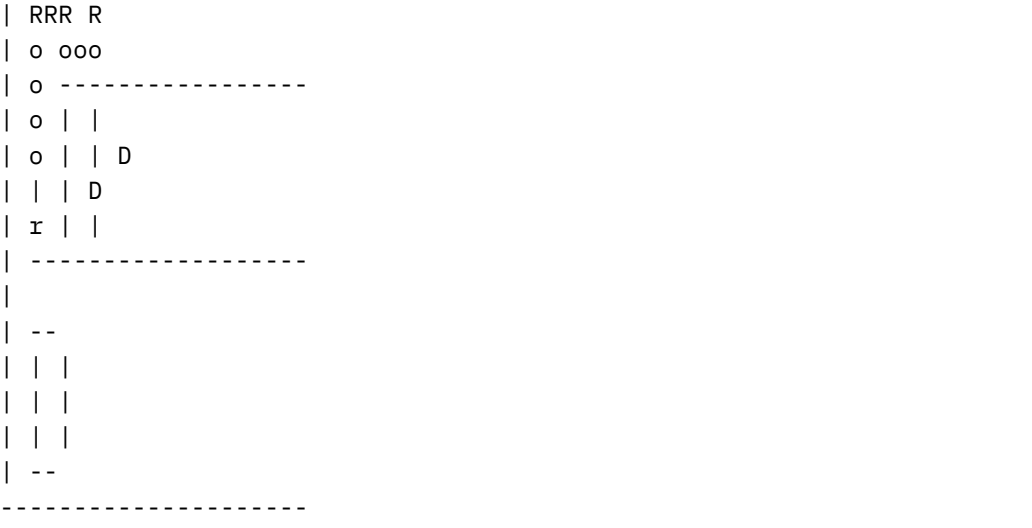
Let's get started!

Remove the 8 screws that attach the cover, and remove the top
cover of the radio.

Orient the radio so that serial, power and RF connector are
closest to you, and the power switch faces away from you.

On the PC board closest to you, in the upper left hand corner
you should see a 80 pin surface mount chip. It has a number such as
64F3334 stamped on it. This is the processor.

Near the upper left hand corner of the chip, you should see 2
small green 0-ohm resistors. To the left of the two resistors you
should see an unpopulated pair of pads. These are the 3 "R"s below,
on the left. The 4th "R" is used for location reference below.



(Picture courtesy of Alan Adamson, NE1H)

Using the soldering iron and knife, *carefully* remove the
right hand resistor. You'll need to alternately heat the two ends,
while apply a *light* pressure with the knife. Once it's hot enough,
it will left off. It's very easy to destroy the pads the resistor is
soldered to, so be *careful*.

You'll now need to short the pads of the left resistor (this
is the unpopulated one). You can either try and re-use the resistor
you just lifted (least good idea), short them with a short piece of
wire wrap wire (OK idea), or use a real 0-ohm resistor (best idea).

For the next step you have two options. One option is easy
and does not require removing the board from the radio (recommended).
The other option is "more correct", but will require disconnecting all
the cables, removing the 5 screws that hold the board down, etc
(purist method). We'll presume you're more likely to want easy, so
here are the steps for it.

Keeping the radio oriented as described above, look below the
right hand resistor (the one we removed). You should see 3 vias
(holes) (see picture above). Follow the left most via, and it should
go to the left most pin of the processor. The second via should go to
the next pin to right, and third via should go to the pin to right.
At this point, you should see two pins that don't appear to be
connected to anything, then a pin that connects to a small black
resistor marked 201 (this is the 4th "R" in the picture).

If you've sucessfully located the 6 pins above, we want to short the pin that is the 4th from the left to ground. Above these 6 pins, you should see a small black rectangle, with 8 pins. I believe it is marked 220. On the side of this part (it's a resistor pack), there is a pin that is soldered to the ground plane.

To short the 4th pin from the left to ground, tack a wire to the pin. Be *very* careful not to short the adjacent pins to the 4th pin. It's very easy to do. It you do, use a piece of Soldrwick or coax braid to remove the solder. Better yet, don't short the pins. Tack the other end of the wire to the pin on the resistor pack described above.

OK, you'd rather do it the "more correct" way. Disconnect all the cables from the board. You'll need to remove the shield from the RF section to remove the white ribbon cables. Disconnect the power and speaker cable. Remove the 5 screws that hold the PC card down. Remove the card from the radio.

Orient the board as described above. Look for the white connector above the packet connector (lower left). It's marked J12. Just above that are a pair of solder pads for a resistor. One side goes to ground, the other goes to a via. Follow the trace on the bottom side of the board. You should see that it goes to a via, but that the trace has been cut right next to the via.

Using a sharp knife and a lot of care, scratch away the solder mask to reveal bare copper on the trace. Use a piece of wire wrap wire to repair the cut trace (bridge the trace to the via). Back on the top side, short the pads for the resistor that are open (this is the lower case "R" on the left, off by itself).

Reassemble the radio. If you used the "more correct" way, make sure you get all the screws and cables back in.

Plug it in, turn it on, fire up the software. Tune a frequency you couldn't before. If you can tune it with the software, and the squelch is open, you're working!

If it's not working, review everything we described. Make sure you didn't short any pins. I can't offer you much more help if it didn't work.

Remember, you screw up your radio, it's not my fault. I don't work for Icom, I don't represent Icom. I don't endorse listening to frequencies you're not supposed to, and can't be held liable for anything that happens, anywhere in the universe, as a result of you making this mod, or even thinking about making this mod (Gawd, I hate lawyers. CYA!). This mod was done completely from our own experience and background, and did not reference any material. We don't know about these people selling the mod on the 'net, but we didn't steal it from them.

Hope this helps. If you've got any suggestions to improve how to make this mod, please send e-mail. If you made this mod, let us know how it went. Also, if you want a list of the PCR-1000 commands we know about, drop us e-mail, or use DejaNews(tm) and search the alt.radio.scanner groups for the post (look for PCR-1000 in the subject).

- Chris, KD4DTS

(Thanks to Alan Adamson, NE1H for his being ready and willing to sacrifice his radio to a higher cause, and his drawing).

> and the price range of the cable.
> Thanks

RG-6 is moslty btween 72 and 75 ohm in real life, if your radio and antenna feed is 50 ohm that is about a 1:5-1 mismatch about .1 db loss, athough if you used simalary priced 50 ohm cable ie- rg-8x you would have about 1.5 in loss becouse of length.. so unless the run is over 100 feet, or you dont want to spend alot of money, just get rg-6 -another tip- make sure that you waterproof then end that is outside any water that seeps in can cause a alight short and then you will get noticable loss...

Zack

Hi,

Who sells a device to couple a scanner to a tape recorder so
that the tape only rolls if the speaker (earpiece) is active ?

My problem is that the only output my scanner has is an
earphone jack. I want to use that output both as input to the mike and
to the remote jack.

Any suggestions are most appreciated.

Regards, Dan

http://www.rdrop.com/users/billmc

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscrition services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase costs $34. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

FCC

The database is also available from the FCC for free. It covers most services but not all. Sections can be downloaded, processed with a supplied Visual BASIC program, and viewed with Microsoft Access. The entire database is approximately 3 GB in size. See:

http://www.fcc.gov/oet/info/database/raeddf.html

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited

selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

| PRO DATA

| Pro Data is a database manager program for license data. It does not come
| with its own data but can import data from APF, Percon, ScanWare, and
| UFDBF database files.

| Pro Data costs $60. For more information, write to prodata1@gte.net, or
| visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 630-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. Current data is for first quarter, 1996.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See:
http://www.wvsc.wvnet.edu/~fcc/index.html

Oh YES please!!!

If someone can find the time, and moreover get the puppy to work, then I'm more than willing to pay a little cash in exchange. One recommendation, please oh please don't use COM PORT 1 it's a real pain in the ass, cos it's used for other things such as me modem.

Ta (in advance),

big-v.

The RG6 has lower loss mainly at UHFfreqs. especially at longer runs
like 75-100 feet.if you
have a run of 50ft or less the RG8 should be fine.

Yes, imho it's one of the 2 most powerful handheld scanners on the market today, the other one is Alinco D10, but the latter lacks some great features that ICOM has. I've got a R10 (w/o cell gaps) and am pretty amazed by what it can do, especially by its VSC feature that helps the scanner to determine whether the signal is voice modulated and therefore spares one's nerves when searching for voice transmissions. Hate it when a scanner stops on every interference hum, creak and buzz in urban areas, R10 filters all that and lets you hear voice when voice is all you want to hear :) The sensitivity and selectivity are decent thanks to triple conversion, NVRAM stores 1000 channels, there are interfaces to connect it to a PC/other ICOM/cymometer such as Scout, what more can one expect from a pocket scanner? In a word - great value for the money.

No, I mean like your instigating and flamebaiting. There's a reason I use that particular quote as my sig but the subtle humor involved would go right over your block head.

Is it the practice on AOL now to use a sig that is topical for every news group that one posts to? Hadn't heard of that one before. Hehehehe. Must be awful confusing keeping all those sigs and screen names straight. You never know, my sig just might have more to do with radio than you realize.

If you don't like their products DON'T BUY IT !! It's a free country !
Go use UNIX or VMS operating systems instead, or maybe even Linux, I
happen to use all three (in addition to Win 95, and Win NT).

The fact of the matter is, Microsoft provides easy to use software for
the masses. Until such time as a next century version of Mr Gates can
provide an easy to use GUI, I wouldn't expect Microsoft go away anytime
soon.

Bill Gates worked (and continues) to work hard for his money and his
company. All the Gates bashers are jealous of his success and wealth,
because they themselves weren't so smart. Wonderful messages we send
our kids in this country - grow up and be rich and successful, but not
too successful or smart - otherwise your a magnet for criticism and
petty jealousy from all the lazy dumbasses who aren't as smart as you
are.

Don't like Microsoft products ? then fine go use UNIX or VMS based
operating systems ! which are inherently more stable to begin with.
All my mission critical apps on my corporate 'heavy iron' is running
under VAX/VMS and UNIX os's anyway.

OK...last call. $275 and I pay shipping. After a couple of inquiries, I must add:

A few people have asked about the backlight - I never heard about this "it eventually dims" issue. I can still see the display clearly and there are, in fact, two clearly distinct
states seen with the dimmer switch. The rest is subjective.

It works great - for the record. I have no complaints about this radio except that I'm tired of missing the continuity of calls here in Virginia Beach and I can't afford two scanners.

The case has three anomalies which are not original - and really are minor. I state them up front, though:

a. my ham call neatly stenciled in permanent marker on the top.
b. two small (1/8") holes on the bottom plastic half where it was mounted to a stand in my Jeep at one time.
c. a small plastic deformation on the top near the front where the map light got a little too close.

>please give a EXACT list of frequencies that this scanner can handle. Thanks

The 3000XLT receivers 25-550MHz and 760-1300MHz.

On the BC-3000XLT the frequencies used by US Cellular at 800MHz are
"blocked" also. On the UBC-3000XLT there are no frequencies "blocked"
(other than the gap between 550 - 760MHz).

Hope that helps.

Cheers,

> would be the end result?

You can modify anything. You can make a rocking chair
stop rocking, and a non-rocking chair rock.

Depends on several factors:

1. what the scanner doesn't do that you wish it did do

2. how popular that scanner is among engineers and
technicians who can probe and attack its innards with
the idea of unleashing some new features. If the
scanner isn't popular, then no one's going to mess
with it.

3. how good of a scanner it is in the first place. You
can't extract blood from a turnip......

4. if you know the difference betwixt a resistor and a resister
and possess the wherewithal to read and follow written
instructions and know your way a little around a circuit
board.

These conditions more or less being met, then you might
wish to make that BC-100XLT like a BC-200XLT, with 200-channels
and 800 MHz coverage, for instance. Or any of a dozen other
things that it doesn't presently do.

>enough for a do-it yourselfer. I've tried a few times but I haven't
>been successful connecting with the radio. Any help would be greatly
>appreciated.

First off check your Scout (has to be ver 3.1 at least) is in AR8000
"mode". If its CI-V mode you won't have much luck at all :-(

Two ways to connect the Scout to the AR8000, one is via the Adaptor
Optoelectronics sell or the other is to add a socket to the side of the
AR8000 yourself.

You can use either a 2.5mm or 3.5mm Mono Plug, a 3.5mm Stereo socket or
if you want to go the full hog you might even add a small DIN plug
allowing all the lines in the AR8000's Remote connector accessable at
this point.

A single 2.5mm plug is your easiest option though. The connections are
straight forward enough. The Ground goes to any convenient Ground point
on the AR8000's PCB. The Tip then goes to the "TX In" pin on the AR8000
Remote Socket.

The lead between the two is just a straight lead with 2.5mm mono plugs
on either end (tip to tip, ground to ground).

With your radio in two parts and looking down onto the CPU/PCB (the
front have with the keypad face down) you will see the white Flat
Flexable Cable (FFC) connector with three small Resistors and one
capacitor just above it. You need to connect the Tip lead to the
resistor second in from the right - thats all you have to do.

```

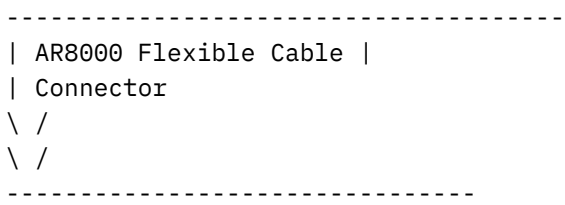
this resistor
```



If you find soldering to this resistor a little daunting then you can always remove the Logic Board and solder the lead to the "leg" on the underside. I can't remember the exact pin but *from memory* its the second in from the right on the top row as you look at it (LCD up) the FFC has seven pins in two rows).

* * * *
* * *

Hope that helps. Have fun in '98

Cheers,

<kamst39+@pitt.edu> writes

Hi Keith,

>Looking for a low cost handheld scanner that covers the aircraft band,
>and perferably VHF HI, and UHF. Anyone know the best route to go?

As mentioned in another reply Yupiteru produce the VT-225 which is a
dedicated "Airband Set" and arguably one of the best for the job.
Sportys Pilot Shop in the States also do a unit for the VHF and UHF and
other than "good" reports I have no hands on experience of it.

Other than that, one of the best buys for the aviation enthusiast (if
its still on offer) is the PRO-60 from RS. I think they were on offer as
low as $169 in the States and at that price you can't go far wrong.

Have fun.

No. I got it from.....the cockroach, you imbecile!

94. Wintone - Buyer Beware

Newsgroup: rec.radio.scanner
Date: 1998-01-01 00:00:00 UTC
From: #629371@att.net
Message-ID: <68ggu3$far@bgtnsc03.worldnet.att.net>
Source record: 175418
Cross-posted to: rec.radio.scanner,alt.radio.scanner,alt.radio.scanner.uk,rec.radio.swap,rec.radio.equipment

If your thinking about purchasing Wintone software from Richard Smirker, you should read this message - and save your money. If my experience is any indicator, once you send him money, you probably wont get anything in return...read on.

I sent Smirker a $19.00 payment (for Wintone) back on October 20, 1997. The check cleared, however, three months later, I still haven't received the program, nor ANY response from Smerker to my three inquiries asking for information regarding the delay...

In my last (and final) message to Smerker - ten days ago - I informed him my patience was at an end, and requested a confirmation that he would send the product - or refund my money. I also advised him of my intention to make the matter public (in these newsgroups), and to file complaints (as a consumer) with proper officials in his local area, should he continue to ignore his obligations.

That message was also ignored....it seems Smirker has time to deposit the customers checks - but no time to send the product or reply to the customers inquiries/complaints...

If you've ordered Wintone from Smirker in the past and actually gotten the product - congratulations. Times have evidently changed...

This message is posted as a warning to those who may be considering the purchase of Wintone. It will be re posted (frequently), so others can avoid getting ripped off.

John

95. FS: Pro 43 Scanner "BRAND NEW"

This radio is still "BRAND NEW IN THE BOX". Never modded, but capable, date code 5A2. 200 channels & triple conversion. This pro 43 could possibly be the last "NEW" one around. Radio comes with box, manual and rubber antenna. Accepting resonable offers or pehaps trade for a Pro 2005 or 2006.

I just picked up a VTech 2900 cordless phone. The documentation says
that the unit uses digital voice coding and that it scrambles your
voice before transmitting it.

How secure is this really?

I don't suppose it occured to you that the problem might
have been with *your* ISP? Or their uplink? Or the next
uplink? Or even the backbone itself?

> plus I was stuck in a loop. Yes, I'm using their browser (ie 4.0),
> their operating system (Windoze 95) and their websight (Microsoft.com).

What do you mean by "loop"? That sounds like a personal
problem. Funny, but I use IE 4.0, Win95 (and NT4.0) and
their websites.....with rarely a problem. Sounds to me
more like your ISP is kind of like those airlines that
deliberately overbook their flights. Meaning that your ISP
only has so much bandwidth and maybe more customers on line
at one time than the bandwidth could accommodate.

Ferinstance, A T1 line at 1.4 Mbps gets overloaded with as
few as forty modem users or a dozen ISDN users, and it's
only worse when there is a mix of the two.

Not only can this happen at your ISP, but also their uplinks.

> If they weren't so dead set about taking over the world, it
> might just be comical. Maybe Bill Gates got his first job at
> a Radio Shack?

Ohhhh geezus.... Okay, so go use OS/2 and support IBM. Or Unix.
Or Linux. Or go back to CP/M. You do have choices........

I had the same problem. I sent him a check for the program and never got anything in return. The check was cashed but I never received my program disk in the mail. I paid for the program on disk not just a serial number. It wasn't untill 2 months later that I finally got an email address. I emailed him my request and finally got my serail number. I never got my disk. I wouldn't buy shit from this guy even if he is a ham operator.

111. Las Vegas, NV on New Year's Eve

Newsgroup: rec.radio.scanner
Date: 1998-01-01 00:00:00 UTC
From: robdon33@aol.com
Message-ID: <19980101020100.VAA16834@ladder02.news.aol.com>
Source record: 175466

Anyone in the Las Vegas Metropolitan area should turn their scanners to the following frequencies for all the craziness tonight:

LAS VEGAS METROPOLITAN POLICE:
156.210--Channel 8 (Input--154.890)
and
155.145 MHz. (Both Metro and Nevada Highway Patrol)

No special events are planned in Henderson, Boulder City or North Las Vegas, but tune into HPD (159.120), Boulder City PD (154.800) and North Las Vegas PD (856-860.7375) as they will be busy as well.

HAPPY NEW YEAR EVERYONE---ESPECIALLY TO THOSE IN SOUTHERN CALIFORNIA...MY SECOND HOME.

Message-ID: <19980101031701.WAA24862@ladder02.news.aol.com>
Source record: 175468

Has anyone out there been able to use Wintone with a Compaq Computer?
Been trying for months now can't seem to figure this one out...
Is there any other similar programs like Wintone available for downloading
anywhere on the net?
E-amiled steaksandwich several times NO RESPONSE regarding Wintone.
Please e-mail direct..

It's not a "straght thru" connection... Its best to forget the little flat type connection and get EEB in Vienna Va. to install a simple plug on the side of your 8ooo that makes a better connection. They did two 2700s for me.... no problem. Their tele is 703-938-6911 Good knowlegable people that are REAL techs... mostly do work for govt. Email is eeb@access.digex.net at last contact.

HAPPY FRIGGING NEW YEAR!!!
My wishes for the new year.......

1. Amor considers an Iname account or something similar, so the doubting Thomas's can leave her and the group alone....

2. Mackey develops a case of atheletes foot (I know....quite a stretch)...since his foot is in his mouth so often, and we know he sucks his thumb, this would hopefully disable his typing abilities and make 98 a wonderful year.

3.That Charles Adkins works on his PR skills, and takes his lithium like prescribed, and spares us from any more of his vulgar spewings.

4. That the 99% of the folks that use this group for what it is intended have a Wonderful New Year in 1998.

The Cb Guy

> would love to have airplane freq as well. Any help would be greatly
> appreciated.

The aircraft frequencies are easy to find, as they are listed in aviation
charts, approach plates, and listings like Jeppesson's or NOAA aircharts.
Check you library reference department, or phone a local flying club, these
plates are updated often so often you can get the old ones when they update.
Civil a/c use 108-136 Mhz AM Mode, mil a/c use 225-400 Mhz AM Mode. You can
search in these ranges.

Ten codes vary from area to area, but 10-36 normally is a time check
(although a local police force near me it meant a stolen bicycle!)

122. A Chain Letter That Gets Results! Guaranteed!

Newsgroup: rec.radio.scanner
Date: 1998-01-01 00:00:00 UTC
From: holymackal@aol.com
Message-ID: <19980101232201.SAA03751@ladder02.news.aol.com>
Source record: 175477

After receiving about 800 of those chain letters in the past year so, I decided it is time for one that works.

Dear Fellow Gardner,

This letter is being sent to you because I know you are interested in your garden and gardening season will be upon us in just a few months.

This is a fertilizer club.It will not cost you a cent to join. Upon receipt of this letter, go to the address at the top of the list and shit in their garden. (you will not be the only one there, so don't be embarrassed.) Then, make five copies of this letter and send or give them to your friends who appreciate organic gardening. You will not receive any money or checks (you won't with those other chain letters, either!), but within one week, if the chain is not broken, there will be 9,216 people shitting in your garden. Your reward will come next summer when you have the most productive garden in your neighborhood.

1. Mr. Will E. Krapp 5. Mr. Smelly B. Hind
1478 Enema St. 7781 Die A. Rea Way
Strewsburg, MA Loosely, MA

2. Mrs.Luce Bowels 6. Mrs. C. Howie Phartz
69 Bedpan Ave. 272 Rectum Alley
Poopee, IL Gas Pain, NJ

3. Mr. Hem E. Roids 7. Mr. Bigger Movements
49 Piles Cr. 4873 Fertilizer Blvd.
Frankfart, SC Opoopa, IA

4. Mr. A. S. Hole 8. Mr. Maxiturd Innis
69 Bunghole Hollow
Dark Hollow Dr. Dingleberry, FL
Colon, WA

If you are constipated, pass this along to your neighbor. DO NOT BREAK THIS CHAIN! One man didn't give a shit and lost his entire garden.

.

>few nowadays. So what?

So what? So why did you reply? Invention is new. To get to invention you use means proven to
work in the past. Thats what it means...new...to invent, innovate.
>

Brad,

That is the good old paging format called GOLAY. It is a much older paging system that transmits at 600 baud....replaced by POCSAG and Flex.

130. John Mackey Fails Credential Challenge, Proven A Liar

Newsgroup: rec.radio.scanner
Date: 1998-01-01 00:00:00 UTC
From: Richard Kendrick <wa7twi@primenet.com>
Message-ID: <34AC3ADF.E191F971@primenet.com>
Source record: 175485
Cross-posted to: alt.radio.scanner,rec.radio.scanner

OK Toilet Boy listen up. On December 17, 1997, I issued you a
two-point challenge. You've boasted that you're hot stuff
technically. I say you're so lame that you're lucky if you can
put batteries in a flashlight and have it work properly on the
first try. I say you are a liar and cannot back up your claims.
So I gave you until December 31, 1997 to prove your claims, or
be branded as the liar and fraud that we all know you are.

To refresh your feeble memory (you shouldn't double up on your
Prozac so much), the first challenge was regarding your claim of
having a Masters Degree. You were tasked with giving the name of
the school and the year your degree was awarded. The second
challenge was to list the name of magazine, title of each article,
and date of publication of all articles you claim to have authored.

On December 21, 1997, you acknowledged the challenge with the
following post when The CB Guy noticed you hadn't responded yet:

> Subject: Re: Liar or Real: Credential Challenge to John Mackey
> From: John <pio@parg.org>
> Date: 1997/12/21
> Message-ID: <349DB395.6E6C@parg.org>
>
> No, I simply have not responded yet. I have been busy. If you look,
> DICK Kendrick stated a date of 12-31-97.
>
> Plenty of time!

On the same date, you tried to weasel out of the first challenge
with a wimpy excuse (you're so lame) and agreed to provide information
to answer the second challenge:

> Subject: Re: Liar or Real: Credential Challenge to John Mackey
> From: John <pio@parg.org>
> Date: 1997/12/21
> Message-ID: <349DB54A.6B2D@parg.org>
>
> I will NOT post what you are asking for regarding my Master's degree
> because I asked for proof of Bill Cheek's Master's Degree in Engineering
> over a year ago. He still to date has NOT responded, but had the
> nerve to ask for MINE after NOT responding about HIS. If you will hold
> Bill Cheek to the same that you want from me I will respond AFTER Bill
> responds.
>
> If you don't like it then sorry, that is the only way it will be.

>
> Regarding the writing for ARRL & other publications, I will supply
> that with no reservations. I am about 100 e-mails behind right now
> so it will be a few days.
>
> I think I will enjoy this!!!!!!!!!!!!

Your issues with Bill Cheek are ancient history and irrelevant to my challenge to you. If you want information about Bill Cheek, you will have to discover another source. This little smoke screen of yours is an amusing and trite, but poorly concieved attempt at elliptical logic, Toilet Boy. It's nothing more than another one of your childish attempts to deflect the focus of this issue and assist you in hiding from the truth. It failed miserably.

The conclusions are quite simple:

On point one: Considering the formidable effort that is required to earn a Masters Degree, a legitimate degree holder would be proud to show it off to anyone who cared to look at it. You claim to have one but fail to show it when challenged. In other words, you can't provide proof of a degree because you don't have one.

On point two: You agreed to provide the information about your articles, yet you have failed to provide the requested data. Again, you can't prove what doesn't exist.

It comes down to one thing Toilet Boy:

By your own actions, you have proven yourself to be a liar.

Now, go crawl back under your rock with the rest of your Phony Amateur Radio Goon-ball twerps where you belong.

131. Re: Explanation of Codes

In article <19980101222101.RAA26116@ladder02.news.aol.com>,
MJAUGER <mjauger@aol.com> wrote:

>I bought my wife a PRO-70 50 Channel Radio Shack scanner for X-MAS. Being that
>we are both new to these things, we need to know what 10-36 or 10-29
[snip]
>some other frequencies to program into our scanner. So far we have only 10. I
>would love to have airplane freq as well. Any help would be greatly

I'm new to this myself, and managed to turn up more information than I can
manage pretty quickly. I did three things:

1. Bought the "Police Calls Plus" book at Radio Shack. I found some
directly applicable frequencies, but even more important I've been getting
a feel for what bands various kinds of things are in. It also has lists
of 10 codes, although your neighborhood may use different versions.

2. Began lurking here. Picked up some stuff directly, but also found
addresses of scanner sites on the web. Some URLs were specifically
posted, some were in the sigs of some of the more seasoned folks here.

3. Used those URLs and began surfing. It did not take long for the
starting points to lead me to the bigger sites with lists of frequencies
by state, etc.

Help!

I used my Pro-2042 and Dx-398 next to my pc....
I keep getting interference on both when I have the
radios on (buzzing....etc)

I have tried everything to get rid of this noise!
I have the computer plugged into one wall outlet,
and the radios into a different outlet, but still get the
noise...

Any ideas? I am about to pull my hair out!

I like to use then when I am on my computer !

Thanks!

Body handling: Inline uuencoded payload not displayed: 10codes.doc

One of the local Radio Shacks could be a good source for a local frequency listing. Not all stores provide this service but I got my first list from them and added new freqs as I came across them. Friends that work for fire departments and police also contributed. Can't remember where I picked up my first list of "10" codes but it is accurate for this part of the U.S. (southeast Virginia). I'll try and attach it to this email. It's in Word for Windows format.
Enjoy, Phil

call R & R communications in Wilmington Delaware. I bought both hand held &
Base from them. The hand held, BC235XLT was $265. Great Dela, NO tax.
302-475-1351
I thought they were a good outfit. I even had them repair my BC25000XLT

You can buy ferrite core filters to put on both ends of your cables,
keyboard, monitor, printer, etc. These help!

Bill Crocker

p.s. I think Radio Shack may even have these.

This is a rewrite of the bile you spewed for the Phony Amateur Radio
Goon-balls web page and the same propaganda you fed to Hamradio
Online.

It's only one press release that got more mileage than it was worth,
not a "real" article. Certainly not two articles. Still lying as
usual Toilet Boy.

> Then go to "Hamradio Online" (www.hamradio-online.com) for

Hi Chris,

The Motorola TalkAbout Radios use the following 14 frequencies:

1 462.5625
2 462.5875
3 462.6125
4 462.6375
5 462.6625
6 462.6875
7 462.7125
8 467.5625
9 467.5875
10 467.6125
11 467.6375
12 467.6625
13 467.6875
14 467.7125

They also use the following 38 CTCSS PL Tones

Tone 01 67.0 Hz Tone 20 131.8 Hz
Tone 02 71.9 Hz Tone 21 136.5 Hz
Tone 03 74.4 Hz Tone 22 141.3 Hz
Tone 04 77.0 Hz Tone 23 146.2 Hz
Tone 05 79.7 Hz Tone 24 151.4 Hz
Tone 06 82.5 Hz Tone 25 156.7 Hz
Tone 07 85.4 Hz Tone 26 162.2 Hz
Tone 08 88.5 Hz Tone 27 167.9 Hz
Tone 09 91.5 Hz Tone 28 173.8 Hz
Tone 10 94.8 Hz Tone 29 179.9 Hz
Tone 11 97.4 Hz Tone 30 186.2 Hz
Tone 12 100.0 Hz Tone 31 192.8 Hz
Tone 13 103.5 Hz Tone 32 203.5 Hz
Tone 14 107.2 Hz Tone 33 210.7 Hz
Tone 15 110.9 Hz Tone 34 218.1 Hz
Tone 16 114.8 Hz Tone 35 225.7 Hz
Tone 17 118.8 Hz Tone 36 233.6 Hz
Tone 18 123.0 Hz Tone 37 241.8 Hz

Tone 19 127.3 Hz Tone 38 250.3 Hz

Kansas Column 01-98

Should be a good year for meï¿½I wrote the correct year in the
date on January
1st. It is usually March or April before it sinks in with me. During
the
first few weeks of a new year I have put out messages over the computer
with
instructions to look for a stolen vehicle or missing person with last
yearï¿½s
date. What the legal ramifications are, I donï¿½t know, but it is
embarrassing to say the least.
This monthï¿½s column is rather short, but do not be concerned.
Several
factors are to blame, one of which is that I was out of town for the
last
part of the month. As a procrastinator I always wait till the last
minute
to get jobs done. Since I was gone during the "last minute" the dang
thing
slipped away from me. The holidays are no doubt to blame for less
reader
input than usual. The coming months should yield volumes of
information.
(Cmon guys, dig for me!)

Here we go.

1. Kansas Central Dispatch status, and some other related goodies.
2. Some Wichita trunked system information.
3. Local Garden City news.
4. Douglas County details.
5. Some web pages relative to the hobby.
6. KCMO Ericsson story.

---
1. Dale sent some e-mail messages about the Kansas state systemï¿½s
status.
Here is a quote. "Well I got some more info today reference central
dispatch. It seems that the T1 circuits (telephone linesï¿½Andy.) are on
order and Garden City will be the first to lose their midnight shift.
They
hope this will be done by March 18. The next ones to lose midnight
shifts

will be Norton, Chanute, and Olathe in that order. I think the patrol
will
put the pressure on KDOT to make these dates cause the KHP is paying
$4,000
dollars/month for these T1 lines. I guess it is getting frustrating
because
we are basically at the mercy of KDOT on this thing and they donï¿½t seem
to
get in no hurry sometimes. By the way the tower at Salina is still
laying on
the ground."
Dale also sent some additional information about the laptop
computers that
are being used in conjunction with the 800 MHz system. He confirms that
laptops are being issued to Troopers and are used mainly for report
writing.
He says using them for radio communications is down the road quite a way
yet. The initial intention is to be able to send reports to
headquarters
via a modem. (For what it is worth, we have been toying with that idea
in
Lenexa, tooï¿½Andy) Dale, who performs truck inspections for the state,
does
his federal inspections on one and zips it to Topeka that way.
Something that has just been initiated is the ability to get
Driverï¿½s
License information via a laptop/cell-phone combination from a private
company that supplies DL information to the Federal Highway
Administration.
He says it takes abut 45 seconds and is good for all 50 states.
Currently
they cannot get any information from NCIC (National Crime Information
Center.) Dale described it as a limited Mobile Data Terminal.
Dale brought up a good point about officers using NCIC. The FBI
requires
that everyone with access to NCIC be certified. Certification involves
knowing how to find rules, regulations, procedures and policies found in
the
NCIC manual which weighs about 10 pounds. Lots of stuff in that book.
KHP
is the NCIC controller for Kansas, and administers all the tests. The
tests
are long and boring, but they are open book tests. It might be my
imagination, but every time I have taken the test has been when I was on
midnights and had to hang over in the morning. Anywayï¿½if patrol
officers
have access to NCIC via an MDT, they must be certified also. Dale
mentioned
that Wichita PD is inching towards MDTs in all their cars. That would
mean

lots of test for lots of cops.
Daleï¿½I am not 100% sure, but I understood that people that had
access to
NCIC and had the responsibility to enter/cancel entries had to be
certified,
but those simply getting information from it did not. I will do some
research and find out if I am wrong. Regardless, as noted in last
monthï¿½s
column, the Communications Sergeants are going to stay where they are
when
their dispatch centers are turned off, so they can give the NCIC tests
to
people in his area.
One of Daleï¿½s friends works for KDOT as a radio technician, and
he said that
KDOT is going to allow local agencies on their towers provided they go
800
and use compatible equipment, meaning Motorola. It is set up so that if
a
local PD bought the equipment, they could go to the tower and simply
plug it
in and fire it up. I would anticipate more cities/counties doing just
that
in the years to come.

---
2. More from Dale. He spent some time listening to Wichitaï¿½s trunked
system
and describes what he found.

Sounds like Wichita FD dispatches the city and county
departments on TG
(talkgroup) 656. Responding units come back on TG 816. There was some
voice FD dispatching on TG 3568 that Don showed as Station Alarms in a
previous column.
Some of the small towns around Wichita, such as Goddard, are
apparently on
the Sheriffï¿½s TG 240. He heard the SO dispatcher checking on them
periodically. He didnï¿½t know if the smaller towns have their own TG for
local communications...anyone have any input on that? The only poop I
found
was in the September 97 column there was a note of Derby PD on TG 1232.
That would lead one to believe other towns have their own TGs also.

---
3. Dale again. (Thanks, Dale, for sending in all this stuff. Without
your
input this month I would have been forced to make up a bunch of stuff!)
Here is some local info for the Garden City area.

He programmed 853.4875 in the scanner and heard what sounded like
railroad
operations. He thinks it might be the small private railroad owned by
the
CO-OP elevators in the area. It is called the Garden City Railway. The
railway used to be on 151.625, but the rest of the Co-ops in that part
of
the state are on local 800 SMRS, so perhaps they switched to 800 for
inter-railway communications.
Another rumor about Garden City Public Works is that they may migrate
to a
different SMR...a Kenwood system. Dale has listened to that SMR, and
says
that conversations tend to stay on one frequency. The frequencies so
far
are 861-863.4375, but he has heard it on 860.0375, too. No data
channel,
either. It obviously is not compatible with Motorola or Ericsson
systems.
He explained that the data is somehow superimposed in the transmissions.
Anybody got any info on that type of system?

---
4. From Bob near Tonganoxie we get the scoop on Douglas Countyï¿½s 2
conventional repeaters on 867.375 and 868.0500. 868.0500 repeats their
low
band dispatch channel of 39.220 and 867.3375, but without the mobiles
for
the most part. Located down south in Baldwin City, it tends to improve
coverage in that area. down there.

---
5. I found a couple web pages that have some information pertinent to
our
hobby and our state. You will need to poke around in them to get to the
Kansas stuff, but it is worth it. Some of the lists look REAL familiar
to
me, but what the heck...the more it gets passed around, the more people
will
enjoy it.

http://web2.airmail.net/lblant1/trunked.htm
http://members.aol.com/wwhitby2/ks.html

I discovered one that had lots of Douglas County details, but for the
life
of me I cannot remember what it was. When I come across it again I will
make sure to get it passed on to you.

---

6. Kirk told me of an interesting transmission he heard on Kansas City
Missouriï¿½s trouble plagued Ericsson system. He was monitoring on
453.050,
which re-broadcasts the dispatch talkgroup. The firefighters can
open/close
the garage doors to their stations via the radio. Saves time, I guess.
Anyway, one unit drove to the garage door and tried to open it. As
often
happens with that system, it didnï¿½t work. They did have voice
communications, so the radio operator said, "Dispatch...can you open our
door for us. Our 18 million dollar garage door opener wonï¿½t work."
I spoke to my boss about it, and he said there is more to it than that.
For years they have been using a system designed to send routine
transmissions like "arrived," or "at the station." KC decided to use it
to
open and close the doors, too. One of our retired technicians that was
familiar with that set up said he was surprised it worked as well as it
did,
since it wasnï¿½t designed for it. Now that it must jump through an
additional 800 MHz hoop it gets even more complicated. I guess we will
give
the Ericsson system the benefit of the doubt on this one, but the story
is
still just as funny if you ask me. Thanks, Kirk.

Well, that is about it for this column. I realize there was not
a bunch of
frequencies or talkgroups this time, but next month will fare better. I
will get some Missouri stuff in then, also. Thanks to Dale for the bulk
of
the information this issue.

Closing thought: If a word was misspelled in the dictionary, how would
we know?

Till next month,

Andy

150. New Chat Channel!

Newsgroup: rec.radio.scanner
Date: 1998-01-01 00:00:00 UTC

#Monitor is an IRC channel in IRCNet. Its primary target is discussion about ongoing HF (also VHF or UHF) radio transmissions - e.g. aircraft traffic, number stations, maritime... Channel frequency logs
We have discussions going on normally on weekdays, between 20 - 05 UTC because most of
people are in North America. However, there may be some action during European afternoon
On weekends, the channel is active approximately between 10 - 07 UTC. You are also welcome to
discuss with any kind of radio related matters.

Our speciality is IRC frequency logging. With "/msg NSA help log" you can get more help about the
methods - see also menu Channel frequency logs. Also, the new feature with channel log
(e.g. for frequencies) is now available, see "/msg NSA help search".

If you have MIRC type /server irc.stealh.net (in status window) to connect to the IRC server.
One on the server type /join #monitor

If you dont have mirc, or dont know what it is...please visit http://www.mirc.co.uk

I heard several FRS units in my area on Christmas day. The most
popular channels seem to be Channel 1 (462.5625) and 2 (462.5875).

My wife and I operate a GMRS small base station on the interstital GMRS (also FRS)
channels. We hear quite a bit on teh first seven which we can use under my license. A number of local buisnesses inlcluding retail security, real estate, mall maintenance use the radios. We have heard several families talking car to car on teh freeway as they drive by. Bicyclists are using the channels on the canal tail near our home. Virtually all of these users are operating with CTCSS so they do not hear other communications in progress. They also can't hear other communication directed to them.

Much of the radio traffic is transitory. Other traffic may surprise you.

Hi There,
I'm curious what happened to TAC-4. A few months back i heard something
to the affect that it is now used for the MTA police. Does this mean
that there is no TAC-4 actual in the 506-507mhz range?

I was told by Motorola that CH1 is 162.5625 and CH14 is 167.7125...I guess you could take the 2 freqs subtract the smaller from the larger and then divide by 14 to get the step size...I'm not sure who's info is more correct yours or mine...

This is indeed an issue that the Personal Radio Steering Group pointed out to the FCC.
The FCC countered with the FRS units having a frequency deviation limited to 2.5 KHz
and being just 1/2 watt in power. Virtually all of the repeaters use DCS or CTCSS.

This is a wait and see. It is going to be interesting since many of the repeaters are located in residences of GMRS licensees and closer to potential interference. The channels of the most concern are 8-14.

Hello,

Has the Militray Air Freqs been removed/banned from hand-held scanners?
Radio Shack has told me you cannot get this coverage anymore on their
scanners. Any clues on purchasing a scanner(hand-held) with this
coverage included?

Thanks,
Joe

I have a Scout Frequency Recorder (Model 45). My (bonehead) nephew changed the recessed CAL (calibration) screw on the front thinking it would increase range. I have no idea how many turns or to what degree he changed it. The unit seems to be working but I'd like to know what exactly may be affected by changing the CAL setting..?

Thanks!

John

In talking with a tech at Opto about our Model 40, he mentioned that the Model 40 will lock out a frequency if it is too close or the RF is too strong.
He indicated the new algorhytym is more aggressive to filter out background RF and noise - says it's quite a bit more agressive.

I'm also interested in ho to determine the firmware version - there is no indication of it on my 40 at startup.

Gig,

I hear 9913 has a real problem with water getting in - I picked some
LMR400 and it's incredible - it replaced a 65' run of RG6U. I can hear
very clearly now and all the static and RF trash is gone. Do all the
math and calculations you want, but hearing is believing.

You can check out some cable specs for youself at:

http://www.timesmicrowave.com/products/

or even:

http://www.cablexperts.com/lmr-coax.html

1. Nephew is in a 'Sally Struthers' type tech school for engineering. I think I'll go ahead and kill him if I get a few minutes, though.

2. Checked manual - no reference to calibration setting at all.

3. Optoelectronics closed until 1/4/98. I'll be traveling this weekend near some airbases and wanted to use the Scout.

Help,

Does anyone know why I can send volume change commands to the 8500 @ 9600 baud and they work fine, but at 19200 they don't work. I can send freq change, etc at 19200 and they work fine, but if I send volume commands.... Well, it doesn't do anything except kinda screw up the serial interface on the radio, I sometimes have to turn it off and back on to wake back up the interface.

This is very odd, as I can send most other commands fine at 19200, infact I trunk track this radio at 19200, but I can't send it a volume change command at that baud.

All seems to work at 9600 however!

Any of you CI-V programmers out there??? Got any ideas?

Source record: 175193

Yes, I agree. However, I just don't believe this couple committed the crime. I think enemies of Gingritch were spying on him to get some dirt. They found some and wanted to get it to the public right away. But how do you do that without getting in trouble and risking bigger scandal for yourself for breaking the law? Do you have your operative hand over the tape to the FBI and tell them he got it while following Gingritch around in a van with lots of antennas on the roof and sophisticated cell-tracking equipment inside? No way. You get some innocent-looking elderly couple devoted to your cause who agree to take the fall. Buy 'em a cheap scanner, let 'em play with it for a day or two, give 'em a copy of the tape and promise them you'll do what you can to lessen any negative consequences.

I know it's speculation, but I find it more believeable than the story the couple gave. I just don't know of any old people who drive around with police scanners and tape recorders who care enough and are prepared enough to record a cellular conversation on a scanner which, as far as I know, was not capable of scanning the cellular frequencies.

If I have any facts wrong, please let me know. Anyone know of any in-depth, investigative articles on this incident?

Hi Jeremy,

Optoelectronics sells decoders which can decode CTCSS (PL Tones),
DCS and DTFM tone.

Please see http://www.optoelectronics.com/dc442.htm for more
information on the DC-442 decoder from Optoelectronics.

The Scout will still operate with the cal trimmer misadjusted, but the
display may be "OFF"...the easiest way to fix this is to feed a signal of
a KNOWN frequency into the unit(for example, a cordless phone or some
other transmitter, operated near the Scout), and adjust the cal trimmer
until the displayed freq matches the freq that the Scout is receiving.

183. New BC895xlt Computer Control Software now available

Newsgroup: rec.radio.scanner
Date: 1998-01-02 00:00:00 UTC
From: enterdev@aol.com
Message-ID: <19980102233901.SAA29054@ladder02.news.aol.com>
Source record: 175197

Attention BC895xlt owners: We have just released PC 895, our new computer control program for the BC895xlt base scanner. All features of the radio are supported, including CTCSS, trunked and conventional scanning, search and autoprogramming and more. PC 895 allows you to build multiple scan banks quickly and easily. Then just double click the mouse to program them in and start scanning in seconds. Even the switch to trunked mode is automatic.

You can read more about it, see sample screen shots and download an evaluation copy at: http://www.ipxnet.com/home/enterdev/bc895.html

Stop by and check it out!!!

Try this site... comprehensive and covers all of south Florida:

http://www.laker.net/mikef/noframe.html

If you can't wait, here's what you are looking for (from the
aforementioned site). BTW, there are licenses for 800 MHz trunked, but
when I was down there over Thanksgiving, they were still using UHF.

POLK COUNTY SHERIFF

185. ICOM R10 Scanner Case

Newsgroup: rec.radio.scanner
Date: 1998-01-02 00:00:00 UTC
From: David Hitchner <nospam@nowhere.net>
Message-ID: <68jugi$i0j@bgtnsc03.worldnet.att.net>
Source record: 175199

For anyone interested I found a cell phone case that is almost a perfect match for the R10. It is a leather case designed for the Motorola Profile 300/500 that I got from BellSouth Mobility for $17.00. After carefully cutting holes in the top flap for the antenna, squelch knob and the headphone jack, its near perfect. The plastic cover is placed just right for the display and keys. The speaker holes are in the right place. The function button is easily pressed through the elastic sides. The only thing I have not done is try to cut a hole for the CI-V of charge port. I'm not sure I want to do it yet.

I have a Motorola Sport 7X. I was using it in the mall today to track my family. Heard several other people doing the same thing. Works great. I currently don't use the PL-Tones because of the low traffic. That may change if these things get popular.

Chris,

It is almost exactly 100" long - just measured it to be sure! Sorry about the delay in getting back to you.

Bob

Why not use a known local freq, like a weather transmitter, police station, FM broadcast station, etc... to help you at least get the calibration close? It's better than nothing, and with patience I'll bet you can get quite close.

Bill,

I mounted it vertically - tho slightly off vertical. We have a split level attic so I mounted it where the level changes - to get the height - and had to offset it slightly.

Ferret's reply to you might be the better answer. I debated on the discone, but went for price since after reading many messages in this group I couldn't find a consesus for one type over the other.

199. Updated BC895 codes

Newsgroup: rec.radio.scanner
Date: 1998-01-02 00:00:00 UTC
From: "A. Giammarino" <agia@ix.netcom.com>
Message-ID: <34ADC430.A8C65FF6@ix.netcom.com>
Source record: 175213
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Latest update on BC895XLT serial port codes (additional information
received from two readers). This list is useful if you are interested
in writing your own program to control this radio.

--
~ a. giammarino

Information on the BC895XLT I/O port and data format |
From: A. Giammarino (agia@ix.netcom.com) |
Last Update: 01-02-1998:2000 hrs |
*** View with a mono-proportional font *** |

Cable information:

Connectors used: Female DB9
1/2 of an 8 pin DIP socket
(cut in half lengthwise)

Wiring: DB9 Socket
3---------------1 data into radio
2---------------2 data from radio
5---------------3

Pinout on BC895XLT is such that pins 1 & 5 and 2 & 4 are tied together. Pin 3
is GROUND. Plug the cable into a computer serial port and connect the socket
end to the radio. Make sure that whatever wiring convention you use, that the
connections depicted above are maintained (e.g. not reversed, etc...) I have
my socket end of the cable connected to the first three pins closest to the
AUX jack.

==========
Discriminator (baseband audio output):

Look for IC3, a small 16 pin surface mount IC that is a MC3371. The baseband
audio output is pin 9. The MC3371 IC is over on the right and about midway
between the front and the rear. The crude diagram below shows the approximate
location of this chip at the 'X'.

--------------REAR---------------
| |
	---		-------	
		X		
	---		-------	

| |
--------------FRONT--------------

Pin 9 (or any pin for that matter) is real hard to get to with a soldering iron. Proceed at your own risk!

I soldered a small 1/8W 10K resistor to this pin and added a .01 uF capacitor in series to it. From there I run a small piece of shielded cable outside and I grounded the cable's shield at the screw near the AUX jack. The shielded cable is terminated with a female RCA jack. I did this rather than drill a hole for a panel mount RCA jack.

I copied the hookup information from the numerous POCSAG decoder circuits on the internet but I kept the 10k resistor and .01uF inside the radio rather than risk dangling this IC's connection outside the radio. I was able to successfully hook up the baseband audio output to an op-amp circuit and feed a POCSAG decoder program.

Interesting note: This scanner has two areas on the PCB that are enclosed. One of them is accessible, the other has its access screws glued over with some epoxy to 'deter' you from getting inside. Also to the side of that enclosure is some more epoxy that looks like it's covering some parts up. I'm guessing this may be related to the cellular band lockout but I could be wrong. Besides what's to stop someone from using an up converter anyway ?

==========
Data format:

The BC895XLT communicates at 9600 baud, 8 bits, no parity, 1 stop bit. Using a shareware scanner program I found on the internet, I monitored the raw data between the computer and the scanner with a second computer. That coupled with some guesswork yielded the following so far:

Note: You will need to put the scanner in the remote mode. Press and hold the ALRT/RMT button until the radio beeps twice. Also, the scanner is case sensitive - USE UPPER CASE LETTERS.

==========
AC: Clears all memory and resets the radio.

AR: status of LINE for AUX OUT
ARN: turns LINE on
ARF: turns LINE off

CC: responds with N - meaning unknown.

CD: CTCSS search function. Causes CTCSS in display to flash. Responded with 23 when it found a PL of 146.2.
CDN: function on
CDF: function off

CS: responds CSxx; xx two digit number representing CTCSS tone

CSxx: sets CTCSS tone xx (e.g. xx=11 for 97.4 Hz)

CT: CTCSS function - Tone Squelch.
CTN: function on
CTF: function off

DL: responds with status of DELAY function - N for on, F for off
DLN: turns DELAY on
DLF: turns DELAY off

DS: Toggles the DATA button (data skip)
DSN: function on
DSF: function off

IC bn: While in the trunk scan mode, this command stops the radio at trunking scan bank 'b', channel 'n'. For example: IC A1 responds with 001456. To access channel 10, let 'n' equal 0. Issue a scan (KEY00) to resume.
See page 45 of user's manual for details.

ID: Turns on/off trunk ID number being sent to data port while trunk tracking.
IDN: Sends ID number to port.
Format is: ID s nnnnnn; s=S while receiving, s=E at end of transmission. nnnnnn=trunk ID number.
IDF: turns function off.

IL: Responds with list of locked out trunk IDs.

ILR nnnnnn: While holding a trunk ID, locks trunk ID nnnnnn out.

IS: While trunk tracking, responds with trunking scan list bank that is being scanned (assuming you're in that mode.)

IS b: stores b into IS function. Passes bank letter to IS function.

LL: read lower limit (for searching between frequencies).

LLfffffffff: set lower limit.

LU: read upper limit.

LUfffffffff: set upper limit.

LO: L/O (channel lockout) status
LON: lockout channel
LOF: restore channel

MA: reads data from current channel. Similar to above. Does not work while trunk tracking or scanning, only manual.

MAccc; ccc=channel number (e.g. 001): Puts radio to channel ccc and responds with data (e.g. C001 F04535000 TF DF LF AF RF N00). Will halt scanning.
Note: F=off, N=on
TF=freq. was entered as trunked (shows off)
DF: DELAY status (shows off)
LF: L/O status (shows off)
AF= Unknown
RF= LINE status (shows off)
N00=reflects CS number (CTCSS not set)

MD: status command that returns a two digit number
(there's more unsolved MDxx codes).
00 while scanning
01 is returned after a write to a memory channel or in manual mode.
06 mode radio is in after TRUNK key is activated (KEY13, not KEY13H)
07 when in trunk tracking mode.
08 monitoring a held trunk ID (condition MD08 and HOLD is pressed)
09 scanning trunk IDs
10 occurs if manual is pressed during condition MD09
17 after a write through the RFnnnnnnnn command.

MU: Mute AUDIO
Responds A - seems to be default MU setting.
MUA: Un-mutes audio, returns squelch to normal
MUF: Un-mutes audio, opens squelch
MUN: Mutes audio

PC b: Shows priority channel for bank b.
Example: PC A returns PC A001, channel 1 is the priority channel on
bank A.

PMccc: read contents of memory channel ccc. Does not halt scanning. Similar
to MAccc function.

PMccc ffffffff; ccc=channel, ffffffff=freq.; Programs channel ccc with freq.
Note there is a space (ASCII 32/20 hex/SPACEBAR) between the last c and the
first f.

PR: status of PRIORITY scan function.
PRF: sets function off
PRN: sets function on

QU: Receive activity indicator. Used to signal computer program
QUN: causes data port to output + if receiving a signal and - if not.
QUF: turns off QU

RI: responds with status of unknown function - N for on, F for off
RIN: turns unknown function on
RIF: turns unknown function off

RF: responds with freq. in format ffffffff only if this frequency is set by the
RFnnnnnnnn command. If the frequency is already in memory assigned to a channel
then the scanner responds NG. Does not work while trunk tracking.

RFnnnnnnnn; nnnnnnnn=freq. (e.g. 470.5875 MHz -> 04705875): Dials up the freq.
in the radio (like the VFO mode) but does not program it into channel memory.
Scanner replies OK after command.

RM: Reads mode (e.g. NFM, AM, etc.)

SB: responds with bank letter(s)

SB b: goes to/turns on bank b. Multiple letters can be used. Works while
scanning. Does not work while trunk tracking.

SG: S-meter reading and frequency (e.g. S014 F04535000). No signal responds S014 for me while a strong NOAA weather station returns S026.

SQ: responds - when squelch is closed and + when open or receiving signal.

SS: List of frequencies that were locked out while in the frequency search mode. See page 31, channel skip, in the manual.

ST: step size. 0000000 indicates default step size for frequency radio is currently on. ST0005000 places radio in 5 kHz step mode. 00125000=12.5 kHz, 00250000=25 kHz, 00000000=default for that frequency. ST by itself will return the new step size if it is changed. Also see KEY15 command below.

WI: returns Wnnn Fffffffff; nnn=three digit number of unknown significance and Fffffffff where the lower case f is the frequency. Works in MANUAL or SCAN mode (example output: W084 F01541750). This number can change even though the same channel/frequency is held on the radio. The number seems to vary slightly.
==========
KEY functions. Just type KEYxx and carriage return; xx=number below. Acts the same as pressing front panel buttons. KEY functions with H at the end simulate pressing and holding the key.

Note: Some of the KEY functions producing errors are likely because the command is issued out of context. They probably are valid functions.

KEY00: functions SCAN button
KEY01: functions MANUAL button
KEY02 t:Functions numeric keypad (numbers only)
Example #1: entry of trunk ID numbers while trunk tracking:
To enter a trunk ID of 1776, the following sequence would be used:
KEY02 0, KEY02 1, KEY02 7, KEY02 7, KEY02 6, KEY07
For 368: use 0,0,3,6,8 (maintain a five digit number for these IDs!)
For 25808: use 2,5,8,0,8
Example #2: enter a frequency
Enter 39.600 MHz
KEY02 3, KEY02 9, KEY03, KEY02 6, KEY04
KEY03: Decimal point on numeric keypad. Also serves to enter a "-" in a talkgroup ID
KEY04: E key on numeric keypad.
KEY05: Toggles PRIORITY (same as PR)
KEY05H: Same as holding down PRIORITY button (assigns channel as PRI channel)
KEY06: Toggles L/O (same as LO)
KEY06H: Same as pressing and holding the L/O button.
While trunk tracking, enters into restoring Single ID mode. See page 42 of the users manual.
KEY07: HOLD button. Steps up through channels (will not put radio into manual from scan). ID hold mode while trunk tracking.
KEY07H: Same as holding down HOLD button
KEY08: LIMIT button. Steps down through channels
KEY08H: Same as holding down LIMIT button
KEY09: SRC button
KEY09H: ID Monitor Mode (See page 44).
KEY10: Turns on WX

KEY11: Toggles DATA skip function
While trunk tracking, shows which bank is being scanned
KEY12: Toggles DELAY (same as DL)
KEY13: Toggles TRUNK button.
KEY13H: Same as holding down TRUNK button (trunking programming mode).
KEY14: Functions DIM button
KEY15: Functions STEP button. To get step size issue a KEY15 and then issue
a ST command.
KEY16: Toggles AUX (LINE in display) function
KEY17: disconnect radio from computer (activated ALRT/RMT button)
KEY18: bank letters began flashing or ERROR. Perhaps the SEND button?
KEY19: Toggles AUTO button.
KEY20: Toggles CTCSS (same as CT)
KEY20H: Same as holding down CTCSS button (Enter CTCSS search mode)
KEY21 b:Specify a bank to trunk track. Do after a KEY13 or KEY13H.
KEY22: Toggles FREQ/CHAN
KEY23: Toggles LOCK

==========
I have been successful in programming the radio by creating a text file and
sending it to the scanner. I had to introduce a small delay between characters
so the data wouldn't overflow the scanner. Each channel and frequency is on a
separate line followed by a carriage return (hex 0D) and line feed (hex 0A).

Update: My error, but my terminal program strips off the line feed (hex 0A).
Apparently sending the line feed causes the radio to reject the data.
TERMINAL.EXE from Windows 3.X has to have the 'Strip LF' enabled under the
'Following CR:' option. This is accessed by 'Send Text File' from the top
memu. In BASIC, I just send a CHR$(13) which is just a carriage return.

For example: (the <cr> is invisible - don't type it. Using a simple text
editor, the editor will actually append <cr><lf> where <lf> is a line feed)

PM001 04537250<cr>
PM002 04535000<cr>
PM003 00459400<cr>
etc...
==========
Software Update: Visual Basic version in progress at my leisure.

The MS-DOS application is functioning. Current version of BCTRUNK.EXE is
V 1.32.

Here's a snippet of the text file BCTRUNK.EXE uses:

000848 SDPD Tac 6
000912 SDPD Tac 7
001008 City Tac 1
001072 City Tac 2
001104 City Tac 3
001296 Southern Dispatch

Below is a screen print of the program:
Note that it intercepts unidentified trunk IDs, a count of the current
trunk (Command 1 has been received once so far), the frequency of the
received transmission, and its signal strength. At the bottom are the
file names that contain the input data and log file.

```
------------------------------------------------------------------------
BC895XLT Scanner TrunkTracking Identification Program (V1.32)

Displays count, trunk ID, and assignment. Writes log file
Press Q to quit.
------------------------------------------------------------
------------------UNIDENTIFIED TRUNK IDs------------------

Last unidentified Trunk ID : 000900 @ 00:25:00
------------------------------------------------------------
------------------------RECEIVING-------------------------

( 1 ) ID:048816 - Command 1

The first freeware DOS program (also written exclusively for the BC895 and posted here on 12-09-97) is still available. E-mail me if interested.

The freeware Windows version is still in progress but with no release date forecast. Picture attached:

I can buy a Uniden SC150B radio from a friend for 120 dollars. It has 100 channels, and it covers 800mhz. Can radio be modified to pick up all 800mhz? Is it worth the money?

Thanks for your time

204. Re: scanners vs 2 meter

Newsgroup: rec.radio.scanner

Other than the obvious benefit of ability to transmit in the ham bands, these radios are usually quite inferior to scanners for the purpose of receiving over a wide frequency range. Not all two meter or dual band handhelds can have their receive 'opened up'.Most have quite limited memory, usually less than 50 channels. Operation is usually more complicated than a scanner, and the frequency range more limited than even an inexpensive scanner. Batteries are more expensive; most take specialized packs. Scan speeds much slower than scanners. Also the sensitivity is often quite low outside of the band limits. Also wideband HT's suffer from intermod interference problems in strong signal areas, that can render them useless.

You would be better off to buy a scanner, if thats what you need. If ham radio interests you, after listening to them with your scanner for awhile, then you could invest in a good handheld 2m without wideband receive, like the radio shack htx202; they are cheap, and much better radios than their widebanded cousins.

Hi all, does anyone have any information on how to modify the Uniden UBC9000 scanner so that the audio is coming straight from the discriminator. I want to do this so that I can successfully monitor and decode data.

Thanks, any help would be greatly appreciated.....

Matt.

> count. You are absolutely and utterly worthless. You are

See above comment. You call these names to anyone that does
not agree with you. Why is it that you can't come up
with solid issues to prove your accusations & can only
find childish names to call people?

> > I have NOT cussed you or called you names is this thread
> > at any point yet you carry on as above for no reason.
>
> That's only because you know I don't care. You jumped

NO, that is because I am a gentleman (& a scholar).

> onto that AOL thing like stink on shit because you perceived
> it as TRUTH and catching me in a lie. You're desperately

YEP!!! And you have presented NOTHING to prove is was NOT
truth.

The fact below still remains:
> > As said before, you have no real facts to defend yourself
> > with or to attack me with. So, you resort to name calling,
> > cussing, & story making.

> So.....it makes more sense to talk about your squaw

hahaha, jokes on YOU, I am NOT married!!!
(strike one)

> and your
> bedwetting kids

hehehehe, jokes on you again!!! I have never had any kids!!!
(Strike two)

> and that looney tunes hospital where you change
> bedpans..... and since people shit in bedpans,

hehehehehe, jokes on you a 3rd time!!! I don't work in
a hospital & never have!!!!!
(strike three)

Hey Bill, three strikes & you are out!!!!!!!!!!!
(I guess your lies are catching up with you, AGAIN)

> Ahhhhhhhh, I seeeeee! And you are the annointed judge of
> my attitude, I take it?

That is correct.

> Heh heh heh heh.....you done *got* some of my attitude planted
> on the seat of your sorry britches when I kicked your ass off
> the Fidonet echo.....and it STILL smarts, doesn't it?

Oh, you mean when you LIED to my sysop because you saw me
as a threat!

You are still smarting because I am part of the enforcing crew that
put you to a stop from starting trouble HERE.

> No,Macksie, I *never* do unprovoked attacks on you. I

Bullshit. I have proof otherwise.

> No, you miserable wretch, I didn't write THAT. I quoted it
> from someone else who originated it.

Another lie. No Bill, you wrote it. Try being honest.

What you hear through the speaker is pretty routine, but it's a fun catch anyway, and sometimes you get a surprise. Bob Grove can't resist turning on the scanner when he passes a fast-food chain.

FAST FOOD SMORGASBORD
By Bob Grove

"Welcome to McDonald's. May I take your order?" How many thousands of times every day is this friendly greeting parroted across the country? And how many scanner enthusiasts tune in 154.600 and 35.02 MHz as they drive past interchanges on our nation's highway system?

But the big arches are not the only architecture to house friendly fast-food frequencies. Just about every chain with a drive-by kiosk has two-way intercommunications with its customers, using frequencies in low band, high band, UHF, and even 900 MHz.

While the belt-worn transceivers are low power, the fixed repeater can usually be heard for a half mile or more. A local McDonald's restaurant uses a Panasonic system known as the "Order Taker," a likely name, indeed. A nearby Hardees' system is made by H.M Electronics. While the radios are usually sub-audibly tone encoded to avoid interference (see Table 4); some cases of intentional interference have led to substantial fines and suspension of FCC licenses when hams have abused their radio privileges.

Some unintentional interferences have proved amusing. A church reportedly installed a wireless public address system on the same frequency as an adjoining fast-food restaurant. As the minister raised his eyes skyward and requested divine guidance, his parishioners heard the electronic reply: "Cheeseburger, all the way, hold the mayo!"

Clerks frequently switch to internal intercom without realizing that, while the customers can't hear their comments, stalwart scanning enthusiasts can. Common fare includes discussions of dates, working conditions, other employees and their employers, and remarks about customers. When the scanner listener happens to be the customer, he reaps a particular delight in catching the employee off guard by responding to what was suposedly a private remark.

A short time ago we learned of one resourceful and highly unlawful prank pulled by a ham with a crossband-capable transceiver.

Poised between two prominent fastfood restaurants, he tuned in the customer frequencies from one restaurant and retransmitted it to the competitive restaurants' order takers. Wendy's order takers were understandably miffed when they were getting orders for Big Macs, while McDonald's clerks were scratching their heads figuring out how to serve up a Frosty! It may seem like harmless fun, but don't do it!

This month MT takes a look at the vast, largely unrecognized spectrum shared by these harbingers of hamburgers. We owe a special debt of gratitude to Bob Eisner for sharing the largest and most-up-to-date list of fast food frequencies ever published.

The list was last updated in JULY 1997.

In the US there are three brands of Wireless headsets for Drive
Thru Restaurants.

Panasonic - Operates in the UHF band (450 - 470 Mhz range)
HM Electronics - Operates in the VHF-low/VHF-High Mhz range
3M - Operates in the ISM band (902 - 928 Mhz Wide FM)

Any idea on who manufactures that headsets that you've seen?

<SNIP>

My point exactly!!! Unfortunatly, when my previous post came up it appeared
as though I had said the following:
> > Why should someone pay more for an item then what it is really worth?
> >
> > Hail the Price Police - keep up the good work guys...
> >

These were lines from Fred Roberts post. His was the post I was responding to.
All I wanted to say was...
If your not interested in buying the radio, gear or
whatever, Don't worry about it. If interested, make an offer !!!
As for the question:
> > Why should someone pay more for an item then what it is really worth?
They shouldn't ! ! But I don't think Nick had a gun to anybodys head.

Kevin

It works great. You are just hung up on spreading
FUD about Microsoft such that there is no reasoning
with you.

> >> For anyone who feels that Windows had the first multi
> >> tasking enviroment...think again.

> >Who said that? And who cares?
>
> I did, I was stating my opinion...and I do, otherwise I wouldnt of said it.

"Of" said it? Don't you mean "have"?

I mean, geez, dude, here you go on the warpath against
some perceived evil.....and can't even communicate with
any correctness of spelling and syntax.

> Microsoft helped write OS2,

Noooooooo. Microsoft WROTE OS/2....at least the early versions
of it. Not "helped".

> I thought stink moves away from shit...isnt that why you smell
> it for a while, then it goes away.

Not unless the steaming pile gets up and walks off.....

> >> they are just progressive to the ignorent computer user.

> >Now is that a fact? You....who can't SPELL "ignorant" are
> >spouting *facts* here? Ooooooohhhh, do you have any more "facts"?

> The fact that I spelled ignorent wrong has nothing to do with the
> situation. Calm your nerves.

My nerves are fine. It's your ignorance that I find
amusing and worthy of calling to your attention, since
you feel so qualified to take the war to Microsoft.

> >> Linux, OS2, Unix, Solaris, and others are far more superior to Windows.

> >If that were true, then "Linux, OS2, Unix, Solaris, and others" would

> >They don't rule. They simply have their place.

> We are talking about superiority, not ability to rule. Becuase one is
> better/more adavanced than the other doesn't make it rule the market.

Well....you sniveled about power and money. IBM has a whole lot
more of both than Microsoft. So why didn't it force OS/2 to rule?
Why didn't IBM just buy Microsoft with its chump change?

> >> Windows is for the ignorent fool.
> >
> >There you go showing *your* ignorance, that's for sure!
> >Learn how to spell the word before accusing others of it.
>
> Once again...personal blowdown with out arguing the subject.

Look, numbnuts, YOU launched an attack on not only Microsoft,
but also on any and all who use Windows. I'd say you got
down and 'personal' right off. That's why I sized you up as
a "live one" and popped you in the poopy a little. I mean, geez,
you sure can dish it out....so let's see if you can take it.

> I dont think other people use other OSs for pretty logon screens,
> I think people get their work done with whatever OS they use.

Actually what difference does it make? This is neither a Windows
nor an OS/2 forum. It's a radio forum. And the majority here
most assuredly use Windows. And you called them "ignorant fools".
Don't be crawfishing now, pal.

> >> It has no creativeness to it.

> >You're right. Windows is an inanimate "thing". It is only
> >as creative as the guy behind the wheel.... 'er, keyboard.

> Very good...now lets talk about what I said...no creativness...it
> claims to offer so much, but yet its nothing new.

You sure have worked yourself up a hollow woody, now haven't you?
What the hell is this "claims to offer so much"? Windows doesn't
"claim" anything. It is only an operating system. That's all.
It's what you DO with a computer that COUNTS....and there ain't a
dern thing you can do with an operating system. You DO things
with the applications.

And......well.....what exactly do you do that is so hot that
Windows applications can't do?

> Windows by far did not bring personal computing to the people...
> how about, money brought Microsoft to the people, which brought
> Windows to the people.

Is that what you think? Wow. I've seen flawed thinking before,
but man, this takes the cake. Good thing it's a free country.

> >> For anyone who says there isnt any support for other OS's,

> >just plumb doesn't give a whit one way or the other. You
> >can waste your time sniveling and whining while other people
> >get their work done. Howzzat?

> Hey man...why the fuck are we talking about me?

Because you bent over and spread 'em wide open begging for
someone to come along and observe your defects. You begged
for it. Looks like you're begging for more.......

> I was talking about OS support. Howzzwhat?

Where the heck did you say anything definitive about OS support?
You took a shit at Microsoft and sprayed gas around the majority
of participants on this forum.

> >> becuase everything that is made for microsoft windows has an
> >> exact for similar product made for all other OS's.

> >Oh, izzat so? Cool. How's come people don't use 'em?
> >Or even want 'em? How's come all this "other stuff"
> >doesn't even get advertised in the magazines and on TV?

> Its called politics. Your a bright guy...im sure you have seen that.

I know this....that I worked with TRS-DOS, CP/M, Unix, OS/2,
and several Apple operating systems. And I *choose* Windows
with a free and clear mind.....with no religious fervor for it,
and no disdain for anything else. Most of us who choose Windows
do so for external reasons of our own.....no big deal.

> >> The computer stores are linked with Microsoft, thats why

> Ohh really...I beg to differ. Computer City is owned by RS/Tandy,
> Tandy used to run Xerox systems on their computers. Microsoft gave
> them a contract they couldnt resist...whalla.

You mean "voile"? No matter. Your position is downright silly.
Tandy hasn't run Xerox systems in YEARS, if ever. I know that
because I was in a position to know. Like, from 1989 on, there
were no Xerox systems in the Radio Shack chain. And based on
what I know but can't prove tonight, I'll say they haven't had
Xerox since 1986. You're looking at 7 to 11 years ago. Computer
City didn't exist. And computers as we know them didn't exist.

You're just being silly now.

> >> Microsoft has done an execellent job on helping the public
> >> experience the pc. But dont think Microsoft is some tech-breaking
> >> company. They arent.

> >Oh yes they are, Just like Chevrolet, Ford, Chrysler, Colt,
> >Remington, Winchester, Smith & Wesson, DuPont, and Dow.

> I see your logic...but why contradict yourself.

I didn't. You are trying to establish some goofy position
that Microsoft isn't a great innovator. My position is "so what",
assuming that it's true. I really don't care. And nobody else
cares. 'cept you.

> You just said that you feel that companies take
> other ideas from other companies/firms.

Certainly they do. An employee at Company A eventually moves
on to Company B, which benefits from that person's growth and
accumulation of experience and skills.

> >> They are plainly spoken:"imitation applied to simplicity."

> >So is the rest of humanity. Inventions are a sum of all
> >inventions of the past. The big breakthroughs are rare and
> >few nowadays. So what?

> So what? So why did you reply?

Because you raised yourself a hollow woody and waved it around.

> Invention is new. To get to invention you use means proven to
> work in the past. Thats what it means...new...to invent, innovate.

Huh?

> >Try your OS-zealotry and Microsoft-hate campaigns somewhere
> >else where people give a hoot....like maybe COMP.GIVE.A.HOOT
> >You're more'n likely to getlaughed at here in this forum where
> >we're a mix of all sorts of hardware and software platforms
> >and where radio is our common bond.
> >Happy sniveling!

> Boo Hoo. Hahahahaha. I am a very big radio ethusiest.

How's come you can't spell "enthusiast", then? Look dude, you're the one waving that woody around. You're the one with the axe to grind. So get your ducks in a row first. You want to accuse people of ignorance....at least learn how to spell the word. You claim you are an radio enthusiast...at least learn how to spell the word.

> I am just stating an opinion, just like the gentleman who
> posted before me.

But....but....you fished out that sorry excuse for a woody and went poking it at Microsoft and people on this forum. You called most everyone "ignorant fools" and spelled it 'ignorent' at least twice....so that was no typo. You need to see your own ignorance before flashing it at everyone else.

> Sorry if I pissed you off for some out of the blue reason.

You didn't. But I am going to piss you off if you're not careful.

It's simple. Don't dish it out if you can't take it. And even if you can take it, don't show your own ignorance when calling others ignorant. To do so is kind of like bending over..... if you catch my drift.

Don't bend over. Or if you do, keep your sweet patooty up against the wall.

The thing is....Uniden isn't about to go to that extreme
to wardance on top of a dry hole. They could have just
as easily epoxied the entire CPU chip and all of its pins
where the effect would be devastating in reality, in terms
of warding off the hackers.

So this dry hole.....makes one wonder if there is something
to hack there....??? Not under the epoxy, because that's
silly. But over on the CPU instead? I wonder if that's
Uniden's way of snitching?

Thanks, Robert.

BTW, this is an interesting choice of frequency spectrum on the part of the FCC. By modding these little radios for external antennas and/or higher power outputs, you could do some serious bleeding over onto the GMRS repeaters...or at least it would seem so.

"Where's that big 'ol CB RAMBO??"

You didnt piss me off at all. A gentleman posted hes feelings about microsoft. I posted my feelings about it and windows. I didnt ask for a spelling lesson, nor did I ask to be taunted. I
caught your drift and it stinks. Ignorant is not a bad word. Sorry if I defended any Windows
users. Obviously its a touchy subject. I dont do anything HOT on my system that I need another
OS. I use both Windows and OS/2. Microsoft and IBM wrote OS/2. Thats why OS/2 can run Win 3.1
apps. Thats why PC-DOS and DOS were the same thing. Thats why OS/2 can run some early NT applications. No offense to anyone who uses Windows. I run it myself. Just stating my opinion.
As for Mr. Cheek...well thats probably the greatest words Ive heard this past year. Thank you for
enlightening my day with your wonderful responses. I'll be sure to have a sample of Vallium sent
to you.

Correct, Microsoft is hardly 'monopolizing' the operating system market as Comrade Reno would have us believe. The fact of the matter is, consumer choice *is* available. You have Apple, Digital, Sun, and a host of other operating systems (including hacker home brew ones that are so unstable and constantly in 'beta'). By definition a monopoly suggests they are the *only* players in a marketplace where no competition exists. This is clearly not the case. The consumer has chosen to buy Microsoft products, no one has forced them to acquire RAS, Proxy Server, Windows NT server, Merchant Server or Win 95...., etc....

The company recruits excellent technical talent. The software team members are 'world class' programmers who develop neat products the buying public wants.

As I said before, you don't like Microsoft, fine, don't buy their products. I'm surprised DOJ doesn't file suit against McDonalds or Burger King on behalf of the small sub shops in nearby neighborhoods alleging that Mickey Dess is 'monopolizing' the fast food market with their huge market share.

Will,

The freqs posted earlier are correct. The VHF freqs you posted are not FRS (Family Radio Service) channels. But, if you look at the freqs you posted, and change the first digit from a one to a four, then they would be right. There are 7 freqs in the 462 range and 7 more in the corresponding 467 range.

Can anyone give me correct Data format to have the program monitor record for a specified time. I apparently have it wrong, because it continues to record instead of stopping the the designated time.

Can the triggered actions be delayed until the previous action has completed?

Thanks, Bill

This web page and the documentation make no mention of decoding the
older Motorola GOLAY paging format.

POCSAG (RPC-1) 512-2400 yes, GOLAY no.

If there is a GOLAY software decoder or this version supports it
please elaborate as the URL above & documentation above show no sign
of supporting it.

Dave,

The only scanner that fits your "fairly wideband" and also is
a trunk tracker is the BC-895XLT which I understand covers the
225-400 MHz Mil air band. The Radio Shack version of the 895,
the Pro-2050 does not cover that band. (nor does it have the
rs-232 computer port).

Does that answer your question?

Happy scanning,

Jon

The only difference between RG6 and RG6-U is the "U" designates
that the cable has Ultraviolet protection in the cable jacket.

Grove wouldn't recommend RG6-U unless it works! Bob Grove knows
more about antennas and feedlines than just about anyone I know.
Better yet, give Bob a call and discuss this subject.

Put it up and you won't regret it.

Happy scanning,

Jon

I own and absolutely love my Pro-2006, especially with a good outdoor antenna which increases reception about 10 fold.

However, I too have heard of problems with the back light and have been advised to use it sparingly because it is next-to-impossible for the owner to replace due to its inaccessability.

241. HamNet Forum - "C from CompuServe"

Newsgroup: rec.radio.scanner
Date: 1998-01-02 00:00:00 UTC
From: Scott Loftesness <sjl@firstdata.com>
Message-ID: <#hFM$S5F9GA.327@nih2naab.prod2.compuserve.com>
Source record: 175305
Cross-posted to: rec.radio.scanner,rec.radio.shortwave

The HamNet Forum on CompuServe is now available to anyone who has Internet access and
either Netscape or IE 3.0 or higher. In the past, you had to have a CompuServe account
in order to get into Forums. Now, as part of a project called "C from CompuServe" there
are over 500 Forums accessible from the World Wide Web, including HamNet

HamNet is one of the oldest communities of amateur radio, shortwave listeners and
scanner enthusiasts in cyberspace. Begun in 1981, HamNet was one of the first "forums",
or online discussion groups, on CompuServe's original "MicroNet" service. Today,
HamNet has 23 message sections and file libraries, covering all aspects of amateur
radio and related electronic hobbyists interests.

There are three levels of participation available with the new "C from CompuServe"
service. Guest Membership provides read-only access to the HamNet message board, and is
free.

Limited Membership is also free, but allows you to enter some of the CompuServe
transactional areas and databases. You download a "Virtual Key" plug-in for your
browser that allows CompuServe to recognize you. In addition, Limited members can pick
one Forum for full participation at no charge. In other words, if the only thing on
CompuServe you're interested in is the HamNet Forum, Limited Membership means you can
fully participate in HamNet, but only HamNet, for free.

Finally, Full Membership allows complete participation in all 500 Forums, for a monthly
fee in the future of under $10. However, during the introductory period now underway,
Full Membership is also available free of charge with a 30 day notice being provided to
you prior to the monthly fee being imposed.

To check out the HamNet Forum, point your browser at this url:

http://www.csi.com/go_c.asp?PIN=HamNet

It'll try to recognize you and then deny access unless you have Virtual Key (IE4.0 for
the Mac comes with it), and take you to a signup screen. You can either select "Free
Preview" for read-only access, or download the plug-in and sign up for membership. Full
membership is now being offered with the free trial mentioned earlier

Please send me an email if you have problems with it, or there's something I can help
you with.

800mhz Possibly trunked. All except City of York and Toronto
already have the capability and the equipment.

>- dispatch protocol
>- communciation centre locations
>
Non of this as far as I know has even been discussed yet.

Communications is going to be a major issue. Dispatching is done
differently from each dept to their stations. It is not something
that will switch over night. 911 is set up to direct calls to the
areas department etc. The existing dispatch centers are not large
enough for all the departments. Major retraining has to be done and
it will cost a lot of money.

They can all stay the same for a long time and just be treated as
districts or something.

You can check out me web page at

FOR SALE: Regency HX2000 Handheld Scanner ($25 + shipping)

This scanner is currently NOT WORKING CORRECTLY. It has an intermittant problem whereas when first turned on it will receive a frequency but then fades away. Perhaps it can be easily fixed. It is in excellent cosmetic condition (see attached photo) and features:

+ 20 memory channels
+ Covers 118-174, 406-512, and 800-950 (including cellular)
+ AM & FM modes
+ Direct entry
+ Search & scan features
+ Keypack lock, LCD lamp and more
+ AC adapter/charger
+ Sorry, do not have the owner's manual

If your antennas are not external they should be. Phisical seperation from the PC may help. Post any details to your set-up, the more info the better able to help out.

What can I use to capture the PL tones?

Any shareware software, or plans I can build a unit?

Thanks,

-Jeremy

256. MultiMode Decoder Software Version 0.9.0 Released

Newsgroup: rec.radio.scanner
Date: 1998-01-02 00:00:00 UTC
From: cps@access.digex.net
Message-ID: <cps-ya02408000R0201981316490001@newsreader.digex.net>
Source record: 175320
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.digital.misc,rec.radio.scanner

I'm pleased to announce that version 0.9.0 of MultiMode, a digital modes decoder for the Macintosh, has been released. MultiMode uses the sound input feature of your Mac, and requires no external hardware.

MultiMode decodes the following modes:

Morse Code (CW)
RTTY (Baudot)
ASCII
SITOR-A
FAX
ACARS
WWVB Time Decode
DTMF
Audio Spectrum Display to aid in properly tuning in stations

Version 0.9.0 has several performance enhancements, and runs on Macs with the PPC processor, and possible some fast 680x0 machines.

A fully functional evaluation copy of MultiMode may be downloaded from the following URL:

http://www.access.digex.net/~cps/sss14.html

For all the people that may not know what a message tracker is. And for all of you who E-mailed me and may think there is nothing wrong with these units.

The following are from Press Releases from the U.S. Attorney's Office. I am not going to inclued the entire release or names of people involved just the info so that you can know to stay away from these devices.

"Charged with the unlawful possession of a computer software package called "Message Tracker" that enabled him to monitor messages"

"These arrests should serve as a wake-up call to all who would be tempted to snoop on the electronic communications of others."

"The interception of alphanumeric pages is a serious crime, and those who illegally intercept the messages of others will be prosecuted"

"To target and prosecute the illegal interception of private communications by any means, including bugging, wiretapping, cellular telephone interceptions, and pager interceptions."

"violating the Electronic Communications Privacy Act."

"If convicted, the defendants could face up to five years in prison and a fine of $250-thousands dollars on each count."

258. PRO-2045 -- On Sale at RS

Roger recently posted that he is going to monitor some of the newsgroups
but is lessening his postings for a while. One way to reach him would be
through his BBS "SouthEast Signals Intelligence Group - SESIG" at 770-942-1089.
I have no connection to Roger or to his BBS, other than I am a subscriber
to it. He charges a paultry $20 per year, and I think it is a steal. He has
all sorts of conferences and file categories, all related to scanning. They
are national in scope, despite the SouthEast in the title. If you're
interested in Federal frequency, that's the place to call.

> names like "Ignats" & "Moron". Why is it that
> you must always resort to such tactics & can't
> simply deal with an issue as a gentleman? Why
> can't you demonstrate some class & dignity?

How is it possible to "demonstrate some class & dignity" with
a common pissant like yourself? You have NEVER been classy
and dignified with me. You've been on the attack for two
years now.

I have no interest in any dignified interaction with you.
I am not compelled to even try. I don't care about you
or any aspect of you, Mongrel Mackey, any more than I care
about dung beetles and pissants.

Why can't you get it in your thick skull that the onus
is not on me to be huggy-huggy, kissy-kissy, and civil?
You launched the attack. You persist in the attack. And
I have nothing but contempt for you. Utter revulsion.

But it is fun to laugh at you. I'll give you that much.

> > Imbeciles, shitheads, idiots, nincompoops, and nitwits, yes.
> > But those kind do not count as "others"....like you don't
> > count. You are absolutely and utterly worthless. You are

> See above comment. You call these names to anyone that does
> not agree with you.

Let's just speak for YOU, Mongrel Mackey. You are not empowered
to speak for others. I have nothing but utter contempt for you.
I look down on you as much as I look down on a pile of dogshit on my
lawn. I don't owe you anything. I have no regard for you whatsoever.
You play no role in the great scheme of things other than as a
detractor to this forum and as a continual antagonist to me.

Why do you think I owe you any more than another solid kick in the
arse?

> Why is it that you can't come up with solid issues to prove your
> accusations & can only find childish names to call people?

You are not "people". There are no "solid issues" where you are
concerned. You have no interest in scanners and scanning. I am
your sole preoccupation. You have been stalking me for two years.
There is no way I want to deal with you other than as if you were
a pile of dogshit. I will deal with you on that level and ONLY that
level until YOU change the name of the game.

> > > I have NOT cussed you or called you names is this thread

But....in a hundred other threads over the years??? Who cares?
You are lower than whale dung and there is no civil dealing with
you. There is nothing to be resolved. There is nowhere to go.
You are just a scumbag stalker and nothing good can come of even
attempting civility with you. You have nothing I want.

Try being civil to a steaming pile of dog-droppings and see where
that gets you. That's how I feel about you. There is no where to
go....other than to occasionally frap you about the lips and jowls
to hear you snivel and blow some more snot bubbles.

> NO, that is because I am a gentleman (& a scholar).

Ha ha ha ha ha. Ri--ght.

> > So.....it makes more sense to talk about your squaw
>
> hahaha, jokes on YOU, I am NOT married!!! (strike one)

I didn't say you were. It's obvious you're not married in the
legal and conventional sense.

> > and your bedwetting kids

> hehehehe, jokes on you again!!! I have never had any kids!!!
> (Strike two)

Nooo, not your real kids. But your squaw's kids .... ???
You? You're not capable of fathering human offspring. Eh?

> > and that looney tunes hospital where you change
> > bedpans..... and since people shit in bedpans,

> hehehehehe, jokes on you a 3rd time!!! I don't work in
> a hospital & never have!!!!!
> (strike three)

Play on words. Asylum. Insane sanitorium. Whatever you want
to call it. I don't care. You're still a vile, despicable,
degenerate, disgusting, reprobate.

Comprende? Savvy? Understand?

You want a change? Show me.

Hello,

Has anybody dealt with this company before?
What kind of reputation does this company have?

Also , what kind of reputation does Copper Electronics have?
I called Copper earlier today and the sales lady couldn't give me a
price on shipping and handling , so I wouldn't make a purchase.

Also will Grove or any other company match prices from Coppers?

Thanks

You should look at Caldera Open Linux, if you want a simple minded install like Win95. I don't use it myself, but I've seen 2 people at work install it that have never installed anything. If you don't have something really obscure hardware-wise, it deals quite well with it. Seemingly as well as Win95, but 2 samples do not a valid universe make. The GUI is very nice and automatic, also.

Yes, if you check the headers you'll see I'm running 95 right now. That's because the Linux ICQ client is for crap, and my relatives like to chat. Family peace is a good thing.

Thanks to all for the info on Radio Shack.....

Messages and opinions on Radio Shack are many,to say
the least.....

Everybody seems to have an opinion on Shack concepts
and stores.

From what I have seen Radio Shack is a fairly decent
place to buy your everyday electronics gear and gadgets,
as long as you know your way and what you want.

Thanks again!

Best regards,
Knut Otterbeck

First let me say that although I am not intending to come off as a "defense" of Microsoft. We would all be in the dark ages if it weren't for the likes of a certain tough, driven businessman/engineer called Bill Gates. And secondly, I would like to correct all those dying breed-MacoPhiles, much to their dissapointment that Macintosh is neither the inventor or creator of the GUI system. The beliegered and unfortunate luck goes to Xerox, who is in fact the original creators of the code that was to be the GUI system we all know and love today. Furthermore, I hope the Mac owners out there have a lot of Endust on hand because they will be using it quite a bit as they gather dust over the next 10 years. There may well be other operating systems over the next decade to be developed, but I can all but assure you, Mac will not be a participant. Sorry!

Of the dozens of companies I have bought radio gear from over the last 10 years of so, the only competent ones are as follows. Universal Radio in Reynoldsburg Ohio, EEB in Virginia, and most of all a little known but eminently knowledgeble group in a little town in California called "Scanners Unlimited". Glen, the owner is by far the most knoledgable of all and best of all he is a "cutting edge" kind of guy, well read and usually is one of the first in the country to get the latest and greatest of radio gear both scanner and CB, to test out before it is readily available to the general public. The main difference between him and the others out there is (1) when you call and talk to him he "knows" what the answers are to every question you will have concisely and to the point. (2) you will get an honest and unbiased opinion wether or not the item will work for "your" application, (3) his prices are if not the very best available anywhere, very competitive. You can't beat that and if I am going to part with the green, he is the only one I will give it to willingly and happily. If my memory serves me correctly, the phone number there in San Carlos California (if the area code hasn't changed) 415-573-1624. He is closed Sunday and Monday, but if you have a need or a question, this is the guy to call. Sorry for the long post but I have seen so many posts of dissatisfaction that I couldn't resist telling you all of my discovery. Good Luck

Bloody rip-offs!

Many of these scanners can be purchased NEW (during sales and
promotions) at prices much cheaper than those you suggest!

COME WITH THE RS PRO-90 VERSION.

Typical Radio Shack ploy...rips off someone else's design and then cheapens it besides. This is reminiscent of their DX-440 receivers in the late 80s/early 90s; identical to a Sangean ATS-803A, minus the DIN audio out jack and the headphones. And of course, the RS version costs MORE besides!

Bryce,

Tim makes all the relevent points in his post. Further to this, I am the owner of both a dual-band ham rig (Icom IC-W2A), and handheld scanners (BC200XLT, AR8000). Both scanners have the HT beat for ease of operation and scan speed. Also, most HT's have only one mode available (FM). One positive point is that you can listen to both bands simultaneously, if you wish. I'm sure another handheld scanner out there also has this feature. . . .
VE4DSZ
VVV
Z

Tell that to the NSA. It is their job to monitor ALL types of
communications including phones and pagers with YOUR taxpayer money. So
remember:It is ok for YOUR government to do it, but not ok for the
average citizen. Got it? Don't forget to pay your taxes at 50%!!!

Better yet, if you have a Icom R7000 or some othe radio w/ SSB, just
tune about 3-4 kc's off frequency in that mode and voila' you will have
clear voice.

>needs.....and for whoever can make good use of it....which
>just HAPPENS to be MOST layers of the computing world.
>
>Just like Unix, Linux, OS/2, VMS, MS-DOS, etc, etc, etc, these
>are made for whoever can make good use of them. None are made for dumb
>or smart people. They're just made for PEOPLE, period.

Exactly. Now lets get to what I said. Target Market.
Their target market mostly is people who are new to computers and wish to enter into the new
world of computing and communication. Yes of course they target all computer users. But majority goes to the less informed computer user.

>> >> Just stating my opinion.
>> >In this scanner forum? Why? Why attack Microsoft and Windows users
>> >here? Any good reason?
>> Opinion. Not an attack. Opinion. Just venting my feelings.
>> Just as the gentleman before me.
>......and....as the gentleman AFTER you.... Me. You vented
>your feelings about thousands of people. So I am venting my
>feelings *just* about you.

I vented my feeling about Microsoft. Not about YOU. You dont work for Microsoft. If you did,
then I would apologize for offending you.

>....which is the part you seem not able to understand. You seem not
>able to get it in your thick skull that you attacked 22,000 Microsoft

Well Mr.Cheek you are very right. You have every right to vent on me all you want, even
though
I never attacked you. But hey, fine with me. I can bash back and forth with you forever,
but
Im not going to. Microsoft did not bring the Internet to the public. Online services
brought
Internet to the public. I used the internet before there was graphical ppp accounts.
Microsoft
was not the reason I bought a computer either. I am not on any bandwagon. People have the
right to complain about anything. Usually people don't complain unless they have a reason

to.
You don't intimidate me, and no body else. I get a kick out of this. So anyway, besides all the trash and garbage, how about we talk about radio scanners. Sound Good? Thanks Mr. Cheek for
enlightening my holiday. I enjoyed the argument.

George,

Check out http://www.qsl.net/ka2pyj for my shareware Windows program
called PROgramit to control the PRO64. This lets you import and manage
channel maps from popular database. Don't be confused by the hardware
discussion. You do not need this for the PRO64.

Message-ID: <19980103224201.RAA14917@ladder02.news.aol.com>
Source record: 175102

The Radio Shack discone antenna (20-013) was discontinued this catalog year in favor of one with a vertical element. I was at the local store the other day and saw them at $25.00. I personally like the antenna for general operations. These are also xmit capable. I was able to pick the last three at my local store.

Try searching Yahoo (GOLAY,POCSHAG) there are several downloads that work OK.
These are not as good as Message Tracker however you can still have some fun.

I have two versions of Message Tracker that work excellent.

If I find the HTTP address for these sites I will send to you later.

Good Luck !

I am not suggesting any prices for scanners!!! If you had read the disclaimer you would have noticed that these were average ASKING prices (not the absolute gospel) taken from the newsgroups (rec.radio.scanner, alt.radio.scanner, rec.radio.swap) during all of 1997. If you find a better deal by all means go for it. I myself purchased a PRO-2005 in excellent condition for only $160 while I was recently on vacation in LA. The AR2700 was previously on sale for $209. Many of the RS models are deeply discounted when they have been on closeout for a while. In fact I have bought ALL of my scanners when they were on sale (PRO-2035 for $229; PRO-2036 for $179; PRO-2046 for $169; PRO-43 for $249).

Am new to scanning. Have just got MVT9000.
Looking for advice/guidance. The scanner seems well-built and has
numerous features. However you will know that the "manual" leaves much
to be desired!!
Believe I read somewhere that the 9000 is prone to "inter-mod" problem
in the region 30Mhz to 80Mhz. Any truth?
I live in N.Ireland.
Would very much appreciate if I could E-Mail with some person so that I
can get the best out of this Scanner

Not a bad idea... The budgets for House races are still not terribly large (well, not as obscene as Senate races). Imagine if there was a huge outpouring of money to Tauzen's opponent from all around the US from radio listeners. $25 each from 10,000 people. That $250,000 would make a *huge* impression on any other congressmen who were thinking about toying around with the radio laws.

We aren't large enough to throw cash around to all of congress, but we can target one or two of the worst bozos.

Alan:

The newer RS Discone has a base loaded coil under the vertical whip. Are
you looking for the length of the whip with coil or without?

Jay:

I think RG6 has less loss per say than RG8 but it also has different characteristics I am unfamiliar with. That may or may not be crucial to your scanner in receive mode but you should probably check.

I use 60 feet of RG8/U with the new RS Discone antenna. Excellent performance and I use it also for transmitting on VHF 2 meters with low SWR. I had a PRO-46 hooked up to it, but there was signal overload and lots of intermod. It's now on my PRO-2006 which has triple conversion - thank GOD.

Hello,

I would like to purchase a mobile scanner.
I was wondering if anybody could suggest the best model/models and/or
name brands that i can consider.
I'm thinking about getting a BCT 7 from Uniden.
Would I need a external speaker for this model?
Also, what kind of mobile antenna comes with the package?
Is the mobile antenna any good?

Thanks

The BEST THING YOU CAN DO about radio interference from your computer is the next time you buy ANYTHING for your computer or another computer system is to look for the FCC certification label.

Almost every computer you buy at the "local" shop that is put together there violates Federal Communications Commission regulations regarding emission of interference. If you do not have a class B certification label on the computer, it is in violation of the laws which require compliance with F.C.C. regulations.

ALL DIGITAL DEVICES sold for use in residential areas MUST be CERTIFIED to comply with CLASS B emissions requlations.

Look for the certification label BEFORE you buy. This will make more difference than all the ferrite beads and other tricks put together and be cheaper in the long run. Also, it is very difficult, but buy only high quality cables (to go to the printer and mouse and stuff) A GOOD 25 conductor RS232 cable will cost about $40 for a 12 footer. The $3 ones are going to carry the radio signals out of your computer and radiate them like an antenna.

But in reality.... put your receiving antennas as far away from you computer as you can and follow good engineering practice etc etc etc and this will drastically reduce your problem (assuming that when you move your antenna away from YOUR computer you are not moving it closer to someone else's !)

Hi Troy,

I've done this with my AR8K and never had any problems in decoding a scrambled conversation. I usually set it to USB and pick a frequency increment of 0.05 Khz (lowest increment on the AR8K). The trick is to tune around 4 to 4.2 kc down. I just tested this against my Uniden Cordless phone and was able to hear (I called the local TIME) the TIME very clearly at 43.9558 (43.9600 was the actual frequency)

Hi there,

The new version of ARC (AR8000 Remote Control) for Windows is available at;

http://www.geocities.com/CapeCanaveral/Hangar/1251/arc.html

This free software controls your AR8000 including bandplan reprogramming.

Please send your questions, remarks about the program to:

gommert.buysen@micromass.co.uk

Hi

I have one just sitting here. In near mint condition with celluar channels. I will take $175.00. It's better than any Bearcat.
Thanks

Can anyone tell me how well a Discone antenna will work I have seen one
in cq for 36.95 it covers from 100mhz-1000mhz you can also use it for
transmitting on 2 meters and 220 and 440 bands.
Thanks for any info

I just got a sales flyer from Radio Shack today and noticed that they have their trunk tracker, the PRO-90, 20-520, on sale for $249.99 until 1/31/98. Their price is now in line with what the mail order places charge for the Uniden BC235XLT trunk tracker. Grove's regular price on the Uniden is $249.95.

Hello to all:

Thanks for taking the time to read and respond.
I have for sale Weather satellite capture software and hardware.
PC GOES\Wefax allows you (with the right receiving equipment) not
included,
to capture display and print weather pictures from polar orbiting
satellites
as well as HF Facsimile. Software, hardware (demodulator) and extensive
manual. You cover all shipping and insurance cost.
$100.00

Contact me fhunt*@*javanet.com

Hello to all:

Thanks for taking the time to read and respond.
I have for sale an AR-3000A widerange receiver 100Khz - 2030Mhz.
Multimode FM-narrow and wide USB LSB AM CW
Wide selection of tuning steps 50Hz to 999.95Khz
Four banks of 100 channels
With A.C. adaptor, extra D.C. cable, users manual.
A service manual (I always buy one for any equipment i own).
Software for scanning and programming of channels by computer.
Hardshell "Pelican" case with locks.
Also included with this is a Marantz PMD201 recorder.
I have no manuals or A.C. adaptor for this recorder.
There is a cable for connection to the AR-3000A for recording of audio and motor control. As this will have to be shipped in two packages (one for the AR-3000A and one for the recorder) you will be responsible for any and all insurance and shipping cost.

$850.00 for the entire package.

Contact me fhunt*@*javanet.com
Please remove the "**" to respond

Thanks again..... Fulton

>Hey Dan
>
>Just curious...what does the display do on a version 3.1
>versus version 3.0?

Since I don't have the 3.1 version, I can only vouch for the 3.0. When
powering up, right after the it test the display(all 8's) the screen
says Scout 3.0. I imagine the latter would say Scout 3.1

BTW Happy New Year to all.

Ummmmmmmmm.......saaaaaaay, podnah, jist zactly WHAT "derogatory
personal private information" are you sniveling about? Be very, very
exact in your reply and leave NOTHING to the imagination.

Spit it out. What are you talking about?

> [We can wander over to the public Commtronics home page and speculate
> about what is there, if you like.

I like. Do it. See how big of a snot-bubble you can blow.

> Questions come to mind. Does the author really think he is the
> Cosmic Badass portrayed there?

Of course. Chalk yourself up three points for that one.

> How old is that picture of the charming couple -- after all, who
> wears an Afro hairdo these days.

Speculate! Take a wild-assed quess! Belly up to the measuring
stick and whip it out! Commit yourself! Be bold! Take a chance!

> Why does the woman look so apprehensive? Is it because the
> man is holding her hand?

No. It's because she's staring at YOU and wonders how the heck
they let a hybrid offspring of a lizard and a loogey get on the
Internet to visit that page.

> Are there answers to these questions to be found on alt.fan.bill.cheek?]

Well, Nostril Nugget, why don't you go there and find out?

Dont talk to me about language "patooty", "ignats", and "howzaat"
>> Sorry if I defended any Windows users.
>Defended? Is this your "ignorence" showing again?
Obviously I did, other wise I wouldnt of recieved this immature garbage from your fat mouth which just spills a bunch of crap, not pertaining to the subject, and attacking a person's ability to spell and their grammar.
>> Obviously its a touchy subject.
>Not particularly. But this scanner forum isn't one of
>your best choices to vent your jealousy of Microsoft and
>Windows.
I have no jealousy of Microsoft. No shit it's a scanner forum. If you would of never responded, then there probably would be 18 followups and arguments.
>> I dont do anything HOT on my system
>I can well imagine that you don't.....
Well considering the fact you were talking about me bending over with my legs spread...I sure
hope your not imagining anything else.
>> No offense to anyone who uses Windows. I run it myself.
>But you called Windows users "ignorent". I guess part
>of your statement was true, since you 'fess up to using Windows.
I said Windows was made for the ignorant computer user. Never did I say users of windows are
ignorant. That was their target market.
>> Just stating my opinion.
>In this scanner forum? Why? Why attack Microsoft and Windows users
>here? Any good reason?
Opinion. Not an attack. Opinion. Just venting my feelings. Just as the gentleman before me.

>
> (I know... I'm a sick, sick puppy!) ;-)

Almost kind of like the climax of the movie, "Titanic". All
that work and it wasn't there.........

But there remains lots of mystery off to the side of that
epoxy blob.....that isn't covered by epoxy. One wonders
if THAT part is intentional. Uniden just had to know that
someone would spot that epoxy glob and wonder about it. And
then see where it was plumb dumb to put it there, and then
wonder why the hell they did it and then start looking around
for something else curious....

And that's what I see in several of those undefined CPU pins.
Definitely a curiosity......

OTOH, some Uniden design engineer could be as sick as you and
did just what you said for the reasons you said.

Which certainly would be good for some yuks and cackles.

I have a RS PRO-2026 mobile/base/home scanner for sale. It's looks are 8/10 and it's only been used moderately. Price is $150 shipped. Trades are considered. Please e-mail if interested. I have heard that the 2026 can be modified for *full* cellular coverage and that their might be a keypad trick to do it. Here's all of the information on it:

FEATURES: volume, squelch, scan and search, 100 memory channels (5 banks), manual feature, monitor feature, lock out, delay, 1 priority channel, built in speaker, 1 touch weather, air, fire, marine and police bands

ACCESSORIES INCLUDED: mounting bracket, owners manual, original box, home stand, and power cords

FREQUENCY COVERAGE: 29-54, 108-136.975, 137-174, 406-512, 806-823.9375, 851-868.9375, 896.1125-956 MHz

The simplest rendition of a "tone finder" is a Low Pass Filter
with a cutoff at around 250 Hz on the high end and maybe 50 Hz
on the low end. Hang the input of this filter on the baseband
audio output pin of the scanner's NFM Discriminator chip, and
then hang a frequency counter on the output of the LPF. It'll
read the CTCSS tone every time. Slick.

I featured a Low Pass Filter in Vol-2 of my Scanner Modification
Handbook, as well as some other stuff about CTCSS.

I think Richard Smerker's WinTone program will snag CTCSS tones.
Check it out at http://www.steaksandwich.com

I presently own a Bearcat 200XLT. Is there some
easy method of increasing the audio output of this
scanner?

I use it for scanning railway happenings, and oftimes it is difficult to
understand conversations on said scanner while driving an automobile.

Using the scanner away from the vehicle ie on a belt pack or handheld
makes conversation easier to hear, but the output is still poor.

Attaching a small extension does speaker does little to assist in
hearing the audio.

If there is no quick and easy solution ie small power amplifier powered
by say a nine volt or AA battery ; do the newer portable models of the
Uniden Bearcat scanner have a greater output?

Bryce Lee,
Burlington, Ontario Canada

346. trunking system

Newsgroup: rec.radio.scanner
Date: 1998-01-03 00:00:00 UTC

Message-ID: <34ada76d.107081106@news.globalserve.net>
Source record: 175150

Are Bearcat scanners which have the
"TrunkTracker" capability any different
(other than said capability) than the
balance of the Bearcat scanners line?

If one programs the frequencies of specific
police services into a TrunkTracker capable
scanner, is said scanner able to distinquish
between the different trunking systems?. For example
a county (or region as here in the province of Ontario)
may use one type of trunking system, the next region
over, may use an entirely different system off trunking.

And is said scanner able to switch readily between trunking
systems if the output signal can be heard beyond
regional boundaires. With Bearcat scanners, there are "banks"
for each 10 frequencies; does it matter if one group
of trunked frequencies is one different banks?

Doe the Tandy\Radio Shack line of scanners which are
manufactured by Uniden (or others) have a similar capability as
per Trunk Tracker? If not, is there a viable substitue?

Finally for those who are into listening to cellular frequencies.
Do new scanners intended for countries other than the United
States, are they still fully capable of monitoring cellular frequencies?

347. scanners vs 2 meter

Newsgroup: rec.radio.scanner

At one time a number of friends in the USA
who are both railfans and Hams, mentioned to me
that their portable rigs could be used for receiving
railway radio frequencies .

Railway frequencies are in the VHF-High Band
between 159.810 and 161.565 Mhz. CN & CP
in Canada also used some frequencies in the UHF
4xx.xxxx series for switching operations in
radio congested areas.

Is there an advantage of having a transmitter/receiver
capable of receiving the above frequencies, in a portable
handheld ham rig, and what advantage does such a
piece of equipment have (aside from the transmitt capability)
over a similarly equipped scanner?

I could perhaps assume as well, that as long as one has
the money in hand to purchase said ham transceiver
there is no restriction on purchase any more than a
restriction on the purchase of any scanner.

Yes, that does appear to be the case now (technically, the MTA
officers, for political reasons, were folded into the LAPD.
They can be identified by their "TR-" calls).

I'm reasonably sure that 'Tac 4' will continue to be called 'Tac 4'.
I'd expect, without any real justification, that the TR units will
eventually be given another frequency to sit on - maybe one of the
new dept freqs, maybe their original frequency once the political
winds favor a return.

Interestingly enough, though the TR- units are supposed to be genuine
LAPD assets now, I've heard at least one TR- unit contact the PD
dispatchers over the outside-agency freq 8*)

>Mike Peters

You are correct. The ACC was announcing it over the air
a few weeks back. The old Tac-4 is now used by MTA,
and it's like the Keystone Kops joined the LAPD :-)

LAPD has been using a lot of their "new" 484MHz frequencies
(24 in all) for several weeks at least and some of em are used as
additional Tac freqs. There's Tac-4B and Tac-6B and i think
Tac-7B, and so far i've heard lots of operations on the 484MHz
freqs especially on New Years Eve. You'll hear them talking
about switching to "187" or "189" or "the blue" or Tac-6 Boy,
all those are among the various 484MHz freqs. I work in South
Central and we keep the scanner on (especially when the
air unit is over our business :-) and i've been matching the
"Astro channels" to their actual frequencies and writing them
down as i identify em so in the next month or so i should most
of em cataloged. They great to listen to, there's a lot going
on on that band!

Most properly designed discones have very broad band coverage and the
range quoted is well within it. The Diamond 130J runs from 25Mhz to
1300 Mhz with a typical VSWR of less than 1.5:1 across the entire
range.

They tend to be a true isotropic radiator, so the gain is exactly
zilch. There are other diamond antenna such as the Diamond RH770 that
give reasonable gain on 144 and 440Mhz (3db at 144 Mhz and 5.5db at
440) and are good for 20 watts.

373. Pro-64 Kicks Ass!

Newsgroup: rec.radio.scanner
Date: 1998-01-03 00:00:00 UTC
From: geovet@ix.netcom.com
Message-ID: <34ae0843.97217@nntp.ix.netcom.com>
Source record: 175227

I bought a Pro-64 before Christmas and just now got around to building the interface cable and loading some frequencies into it. Using LOAD64, a software program that I downloaded on the WWW, I plugged in the cable and tried uploading a file of 57 local frequencies just to see if it would work. In a matter of seconds, I got a "Finish" message on the display. It was so fast that I didn't believe it had worked but I turned off the scanner, unplugged the cable and turned it back on. Sure enough, all 57 frequencies were programmed into the channels where I wanted them!

My only regret is not waiting a little longer to buy a PC interfaceable scanner: I got a Radio Shack flyer in the mail today and they're having a clearance sale on the Pro-2041 for $179.99! That's $20 cheaper than they were selling the Pro-64s for and the 2041 is a base model!

Anyone interested in the software can find it at:

http://www.access.digex.net/~kplotkin/scanner.htm

It is distributed as "careware" with no fee but only the author's request that you make a donation to your favorite charity. My thanks to Ken Plotkin for this fine piece of simple yet functional software.

Hello,

I realize that this is a CB radio NG but I need some help and you're the only electronically gifted people that I know that might have the information that I need. Now, I know that one of you has tinkered with, in the past, an old video camera (the kind that connects to a vcr by a 10 pin din cable so you can record tapes). I need to know the pin-outs on that 10 pin cable. I'm pretty sure that the pin-outs are the same on all of those cameras because you're supposed to be able to use an adapter for them so that they may be used with the newer vcr's without the 10 pin hook up. I've seen the adapter at the online auctions, but I can't never win one the the dang things. I just want to hook up a power supply, audio and video outs. Any help would be appreciated.

Thanks,

Eric

>all 800mhz? Is it worth the money?

I had a SC150B. I was very pleased with it, you sure won't be
disappointed.

For the 800MHz, no, there is no way you can modify it as it's
programmed directly in the microprocessor ROM memory core but you can
search from 880 to 915 MHz and you still be able to copy the cellular
conversation as images of the original frequency. I was surprised
that the designer did'nt rejected much the image in the 800MHz and
that make it an advantage for the cellular listener.

Of course, if you're in US, it's illegal to listen to cellular and
that's up to you to decide what to do.

Hope I could help.

>exactly may be affected by changing the CAL setting..?

As others said, use a frequency source that you KNOW the frequency to
ajust it.

For example, if you have a cordless phone, place it on channel 1 (Of
course, if you can see the channel). On most 10 channels cordless,
base frequency is 46.61MHz and 25 channels is 43.72MHz. So, when I
say BASE frequency, I mean the frequency of the BASE :-) What I mean,
make sure you dont record you cordless himself that work at another
frq. To do that, simple, press on 'talk' button and but the cordless
10-20 feet away and go at the antena of the base. Simple no.

If you do have a CB, it's simple too, tune at CH 1 and calibrate your
optoscout(r) while pressing the PTT. CH 1 is at 26.985MHz.

If you know of a friend who have an amateur radio transmitter, tune
your scout while he transmit.

If you know your local PD freq, go at the transmitter site (usualy at
the police station) and wait there for a transmission to tune it.
Make sure you do not show yourself too much with your scout if you
dont want to pass an unwanted interrogation :-)

If none of these, go to your RS store near you, I'm sure the guy there
will be happy to help you tune it. There are lots of amateur
transmitter equipment there and it will take only a few minutes or so
(I hope).

Remove the anti-spam texts from my return address.

> Thanks for any info
> Bud

I have the (newer model) RS Discone with the vertical whip installed 40 feet off the ground with 60 feet of RG8/U. I find the receive performance is excellent on all bands, particularly on UHF (400 MHZ range) and (46-49 MHZ).

Some of the Discones I've recently seen in ham magazines are even enhanced for 800 mhz. They are quite easily indentifiable by the curled tips on the horizontal elements. I'm not sure how well they work and how the other bands are affected by this mod but mine picks up enough cell towers to stop at almost every 30 KHZ step when scanning the cell band on a busy day.

Some of the Discones are made of weaker and hollower tubes (elements) than others. RS made the new one a little sturdier than the previous model. Mine's been up for almost 6 months and been through some pretty bad storms, lots of wind, snow-ice etc... and she's still in like-new condition. Once in a while I take it down and check the small nuts holding in the VHF radials as they tend to loosen.

I recommend it primarly for receiving as it offers no gain in tx for VHF nor UHF. It is very easy to find a good vertical with significant gain in VHF and UHF these days if your going to do alot of transmitting. I have transmitted -QRP- on 2 meters with mine and got good preports. The SWR adjustments are easily made by adjusting the vertical whip.

How serious is the baclight display problem on the older 2006's?

By avoiding using the "bright" position as opposed to "dim" can one expect to have a problem free display or is it bound to go dead eventually?

Has anyone tried to replace the display on these scanners?

Thanks in advance for the replies.

Vince

Souns like a good deal. I believe that one has a tone card in it.

In Canada, almost every single model of scanner is at 25% off and
apparantly the triple conversion model PRO-2037 will be even more
reduced in a couple of weeks.

> "Message Tracker" that enabled him to monitor messages"
>

Wait a minute, here...
Despite what the US Attorney's office said, possession of Message Tracker
is not illegal. The USAO does not interpret the law, they only enforce it
(and are often over-zealous in doing so).
The key will be when the actual charges are filed, and I don't see how
they can be charged with posession of something that's not illegal.
Grandstanding in front of the media is very different from the truth in
many cases, and this is one of them.

> "These arrests should serve as a wake-up call to all who would be tempted
> to snoop on the electronic communications of others."
>
> "The interception of alphanumeric pages is a serious crime, and those who
> illegally intercept the messages of others will be prosecuted"

Only when caught.

> "To target and prosecute the illegal interception of private communications
> by any means, including bugging, wiretapping, cellular telephone
> interceptions, and pager interceptions."
>
> "violating the Electronic Communications Privacy Act."
>
The *ability* to violate the act is not, in itself, a violation.

> "If convicted, the defendants could face up to five years in prison and a
> fine of $250-thousands dollars on each count."

The maximum is always quoted, and seldom given.

> Now, I know that one of you has tinkered
>with, in the past, an old video camera (the kind that connects to a
>vcr by a 10 pin din cable so you can record tapes). I need to know
>the pin-outs on that 10 pin cable.

Hello Eric,

Yes they are (almost) all the same. A few were brand-specific for some control lines but you can ignore them.

Here's the info. References are from looking at the male connector from the solder side:

Put the gap pointing up. First pin clockwise is pin 1. Eight pins around the circle, pin 8 at approx upper left. Two pins in the middle.

In center, pin 9 is at top, pin 10 below it.

1 -- Video high
2 -- Ground
3 -- Data (ignore)
4 -- Clock and tally (ignore)
5 -- Standby (ignore)
6 -- Recorder pause (ignore)
7 -- Audio high
8 -- Ground
9 -- Ground
10 - +12 VDC

So take your video out of 1 and 2. Audio out 7 and 8. 12 VDC in on 10 and 9.

You may want to buy a mating 10 pin female connector so you don't have to cut the connector off the camera cord. Some of the surplus places have them, and Radio Shack used to and might still. PC Electronics probably still has them also. http://www.hamtv.com/

If you keep your eyes open you'll find the power supply and breakout box at a hamfest somewhere typically for ten bucks.

Hope this helps.

Vincent:

They (2005, and 2006) all seem to go dim after a few years. I would think using the dim setting, instead of the bright setting, should prolong it's life. Some people have a switch to actually turn if off when it's not needed. So you could turn it on to program, then off while you're scanning. Bill Cheek performs these types of modifications also.

To program the Pro-90:

I live in Birmingham, Al as example. There is a little booklet which
came with the radio.
In the book is listed the 2 trunk systems in Jefferson county.

Pick a bank, example bank 0. Now, program all the frequencies of the
trunking system
into this bank. once you have this done, press the "trunk" button. The
display will blank
and the bank digits at the top of the display will blink. Press the
number of the bank you
wish to "trunk scan". Press the "0" button. If there is a "carrier"
present, the scanner will
lock onto it. When it does, press the "srch" button. Now, the scanner
will lock onto the
first signal it comes to. If you want to track a conversation, press
the hold button. You
will notice that the "number" or trunk id has been locked. Now, when
one of the persons
transmitting unkeys, the radio will "follow" the conversation to
whatever frequency they
turn-up on.

If you live in an area which does not use the "default" type of motorola
trunking, you may
have to manually determine the system by trial and error (instructions
in booklet). Fortunately for me, Birmingham uses the default system,
and the scanner works flawlessly.

Let me know if you get your scanner working....it's a really good unit
regardless of the
trunking feature....

Joe,

It's just a Radio Shack marketing decision. They went from one of
the first to include the Mil Air band in their GRE made scanners
to a "run and hide" attitude for whatever reason, maybe cost of
production vs. low market sales for that band.

There is no ban the Mil Air band.

Current handheld scanners capable of 225-400 MHz that I know of are:
AOR AR-8000, AR-2700. (is the 2700 still in production?)
Icom R-10
Alinco DJ-X10
Yupiteru 7100, 9000 etc. (not legal in the US)
Welz Standard WS1000 (is it legal in the US?)
Pro-26, not really current, but still available new.
Bearcat BC-3000 XLT

Older handhelds: Pro-43, BC-2500, Icom R-1, AR-1000
any others?

There also some ham handhelds that cover the Mil Air band like the
Yaesu VX-1R and others. How well they perform is another question.
I had an Icom IC-24AT that covered the Mil Airband but it was
deaf as a post thru most of the band.

Happy scanning,

Jon

>Are Bearcat scanners which have the
>"TrunkTracker" capability any different
> (other than said capability) than the
>balance of the Bearcat scanners line?

Not really. They program the same way (except for trunking mode) and handle RF the same way.

>If one programs the frequencies of specific
>police services into a TrunkTracker capable
>scanner, is said scanner able to distinquish
>between the different trunking systems?. For example

Not as you describe it. The Uniden and Radio Shack trunk tracking scanners can only handle Motorola trunking.

>for each 10 frequencies; does it matter if one group
>of trunked frequencies is one different banks?

Each trunked system must have all of its frequencies in the same bank, and they have to be punched in while the scanner is in "trunked program" mode. Since Motorola SMRs use a control channel, there can only be one control channel programmed into each block. The scanner locks onto the first control channel it finds in a block.

>Doe the Tandy\Radio Shack line of scanners which are
>manufactured by Uniden (or others) have a similar capability as
>per Trunk Tracker? If not, is there a viable substitue?

The Radio Shack trunk tracking scanner is the same as the Uniden TrunkTracker, being manufactured by Uniden for Radio Shack.

>Finally for those who are into listening to cellular frequencies.
>Do new scanners intended for countries other than the United
>States, are they still fully capable of monitoring cellular frequencies?

Scanners manufactured in the United States, whether for export or not, are made without cellular coverage. It's not worth the expense for manufacturers to include cellular coverage (and do all the paperwork and special handling necessary to ensure compliance with U.S. law) for the relatively few scanners that could legally be sold outside the country with cellular frequencies.

Besides, other governments (including Canada) are feeling pressure from the cellular and PCS industries to ban cellular reception in their own countries.

Source record: 175256

Ed,

Can you be more specific about the trunking frequencies you
are trying to program? Have you read the manual thoroughly?
The Pro-90 can only track Motorola trunked systems. It cannot
track E.F. Johnson or GE/Ericcson systems.

Here are some tips.

1) All trunking frequencies must be programmed in the trunking
mode. Press trunk and hold until it beeps twice. Then select
the bank you want to program, then program each frequency
in the system in that bank up to 30 frequencies.

2) You must have the control channel programmed. All frequencies
in the system must be entered.

3) When the frequencies are programmed, press search and the
scanner will search for the control channel. When it finds
the control channel, the display will show a status bar for
each frequency in use including the control channel.

Have you gotten this far yet?

If not, review programming instructions and confirm the frequencies
you have are valid and complete.

If you program frequencies in from the booklet, and you don't hear
anything or the scanner can't find the control channel, the system
may not yet be operational. I have found this to be the case with
several systems in my area that are licensed but not yet in use.

Let me know if you need further assistance. Feel free to call me
at 801-565-0095.

Do you know if the Pro-26 allows you to monitor 225-406 Mhz
in AM mode? Most of the Realistic scanners that I've had in
the past only all Narrow FM in the is band and will only
switch to AM in the 118 - 136 Mhz band.

Yes, the Pro-26 does allow mode selection from 225-400 MHz,
but I can't remember if the Pro-43 does and I don't know if
the BC-2500 does although I would think it would.

What kind of mod do you want that Bill can't do?

My favorite mod, which I know Bill does not describe, is to paint the
scanner flourescent yellow. That way if it falls off my belt I have a
much easier time finding it.

Hope this helps.

I forgot to add that there is an AM only aircraft scanner called the JD-100 Air-Scan (made by JAL Data division of Japan Airlines but well may be a GRE product) it's only 20 channels but covers both 118-137 and 225-400 airbands. For $150 it's hard to beat.

The only place I know of that carries it is Sporty's Pilot Shop in Batavia, Ohio. 1-800-LIFTOFF, or www.sportys-catalogs.com/pilot/pilot/html

Sporty's offers an impressive 5 year warranty.

Happy scanning,

Jon

Too bad you can only access this service by using a Windows System, or a Mac using IE 4.0. It's Microsoft all over the place all over again. As a long time Compuserve customer, I am sorry to see this. Unless you are happy with using Windows or IE on a Mac, I would let them know.

> >Noooo.....but "ignorent" sure as hell is. And you wrote it,
> >all the while attacking other "ignorent" people, Ignats.

> Dont talk to me about language "patooty", "ignats", and "howzaat"

I *will* talk to you about language. Language at all levels and layers
is my mastery. And you can stick that in your pipe and smoke it. You
come on here lambasting "ignorent" people....geezus, man, you are the
epitome of nescience. And I most assuredly will point out your defects
when you take such license to point out the defects of others.

> >> Sorry if I defended any Windows users.

> >Defended? Is this your "ignorence" showing again?

> Obviously I did, other wise I wouldnt of recieved this immature garbage from your fat
mouth
> which just spills a bunch of crap, not pertaining to the subject, and attacking a
person's
> ability to spell and their grammar.

Well, you horse's ass, you attacked 22,000 people who work for
Microsoft, and another few hundred people on this forum who use
Windows.

Don't gimme that 'attack' shit. Ol' "Bill Masters" of
<nospam@never.mor> posted that first stupid slam and here you flew in,
like a fly zeroing in on a pile of dogshit.

And you jump on "ignorent people" as if you were a shining ray of
brilliance. You opened fire, peckerwood; and now we have a casual
exposure to your own imbecilic idiocy and profound nescience.

That's fair.

> >> Obviously its a touchy subject.

> >Not particularly. But this scanner forum isn't one of
> >your best choices to vent your jealousy of Microsoft and
> >Windows.

> I have no jealousy of Microsoft. No shit it's a scanner forum.

Ahhhhh....do I detect a spark of intelligence?

> If you would of never responded,

Oooops. I was premature in detecting that spark. Time for another
English lesson, Ignats. The correct expression is: "If you would
HAVE never responded...." or even, "If you WOULD'VE never responded.."

Your use of the word "of" in place of "have" or the contraction,
"'ve" is a gross public display of utter ignorance. You ever hear that
old saying, "People who live in glass houses ought not to throw
stones"? Well, you being so wretchedly ignorant and all, ought not be
calling other people "ignorent". You should spend your time trying to
overcome ignorance....or at least the public display of it, anyway.

> then there probably would be 18 followups and arguments.

Nevertheless, if YOU hadn't responded to Bill Master's slam dunk
on Microsoft, then .... Don't blame HIM for your actions unless
he controls you somehow.

> >> I dont do anything HOT on my system

> >I can well imagine that you don't........

> Well considering the fact you were talking about me bending over
> with my legs spread...I sure hope your not imagining anything else.

Not your LEGS, dumbass.

> I said Windows was made for the ignorant computer user.
> Never did I say users of windows are ignorant. That was
> their target market.

Then you are even more ignorant than I thought. Windows is
used by all layers of society, from the first-time down home
user to the highest echelons of science, R&D, military, and
rocketry. Windows is made for whoever finds it suited to their
needs.....and for whoever can make good use of it....which

just HAPPENS to be MOST layers of the computing world.

Just like Unix, Linux, OS/2, VMS, MS-DOS, etc, etc, etc, these
are made for whoever can make good use of them. None are made for dumb
or smart people. They're just made for PEOPLE, period.

> >> Just stating my opinion.

> >In this scanner forum? Why? Why attack Microsoft and Windows users
> >here? Any good reason?

> Opinion. Not an attack. Opinion. Just venting my feelings.
> Just as the gentleman before me.

.....and....as the gentleman AFTER you.... Me. You vented
your feelings about thousands of people. So I am venting my
feelings *just* about you.

...which is the part you seem not able to understand. You seem not
able to get it in your thick skull that you attacked 22,000 Microsoft
employees and several hundred users of this forum.

Which.....by the way.....I don't mind. The point is....if you can
attack THEM....then I can poke you a little and see what you're made
out of..... know what I mean?

And you definitely feel a little squishy and wormy, if you ask me.

Nevertheless, it would be a very good idea if you were to go learn
how to use your computer and take a long, strong look at some of
Microsoft's products....the kind of products that let you do what
you want to do....liken unto being creative and productive.

You wouldn't be on the Internet today if it weren't for Microsoft.
No, they didn't invent the Internet. In fact, Microsoft didn't even
know about the Internet not too long ago. No one did. Just a few
insiders. But when MOSAIC and the NCSA made some major contributions
to the ease of getting on and using the Internet, Microsoft and a
bunch of others caught on real quick and went to town.

And whether or not you use any MS products now is not relevant. MS
made it possible for millions of people to use the Internet, and
because of that magnetic drawing.....here you are, too. You wouldn't
have been here if it weren't for Microsoft....and chances are, you
wouldn't even own a computer if it weren't for Microsoft.

Talk about biting the hand that feeds you..........

What a jerk.

And I'll tell you something else whilst I'm at it. You're not "venting
your own feelings". You ain't got a clue to your own feelings. Rather,
you're on someone else's bandwagon...where it's "cool" to slam Windows
and Microsoft. You're marching to someone else's drummer and stepping
and fetching to the tempo of someone else's music.

You wouldn't be saying half the shit you spewed if you truly developed your own feelings and senses of savvy. It's just that in certain circles, it's "cool" to bash the Great Satan, Microsoft.

Well, Bunky, you just march your sorry ass over to Iran and listen to those ayatollahs and mujadeen lambaste the Great Satan, United States of America. It's the "cool thing to do" over there. Also down in Cuba and over in Iraq........

You start thinking with that head that sits on your own shoulders; seeing outa your own damned eyeballs; and hearing outa your own miserable ears; and feeling with the long bony fingers you were born with; and tasting with the mouth your mammy first shoved a titty into.....and you won't be spouting half the nonsense you've done so far.

I don't give a hang that you don't like my "tone". You just think about things for your own damned self for a minute. You've been a puppet dancing a jig at the end of someone else's strings.

There's no sense in that. Dance your own dance. Play your own music.

If you do....then whatever you've got to say will come out a whole lot different.....and that's not to say it will be agreeable with me or anyone else. THAT's not the important thing. It is not necessary to agree or even be agreeable.

It *is* necessary to do your own thinking.

AS YOU PROBABLY KNOW THE PRO-90 IS A "HOUSE LABLED FOR RADIO SHACK" UNIDEN BC-235XLT TRUNKTRACKER. THE SCANNER IS GOOD BUT EVEN IF ON SALE FOR $250 IN MY OPINION YOU WOULD DO BETTER GETTING THE IDENTICAL BC-235 FOR $260-270 BECAUSE IT INCLUDES AN EXTRA BATTERY PACK & A UNIQUE EXTERNAL CHARGER THAT CAN CHARGE BOTH THE SCANNER & THE EXTRA BATTERY AT THE SAME TIME. NEITHER OF THESE COME WITH THE RS PRO-90 VERSION.
HOPE I WAS OF SOME HELP & GOOD LUCK.

> >......to talk about "ignorent" people, no less. How ironic.....

> That was just great. That was the most pointless piece of words
> I have ever seen yet on this topic. I was originally talking about Microsoft,

Yes? Microsoft is a large company with 22,000 employees, all of whom
are people. I know many of them, and they are conscientious, hard-
working people, with a high spirit and a zest for life.

> and then some high-horse fuckhead decides to attack me.

Well? YOU attacked THEM. Outa the clear blue, too. No one jumped
onto this forum whooping up Microsoft and how great they are. You
just traipsed in; dropped your shorts; and took a shit in public; and
for no damn good reason, either. You opened yourself up for a public
examination of your skivvies. You DID it, man.

> Please...get the fuck out of here.

I wouldn't be holding my breath, if I were you.

> Your way off the subject, and now your accusing
> me of being a snot-nose.

I am not!!! I'm just observing those great big snot-bubbles you've
been blowing outa the end of your protuberant schnoz.

You need to stand in front of a mirror and get yourself a pair
of schnoz scissors and trim those tufts of nostril hair that
stick out. Your snot bubbles cling to them and are just absolutely
awful to look at.

> Listen to your loud mouth.

Yes. You will.

Ref: Evesdropping on Gingrich...

One can be sure this was from some friendly Democratic source.
It was discovered that all of his conversations were being
monitored by certain functions within our own government...

A disgruntled employee (Democratic) disclosed the mess!

No real damage done...however, beware of who the
lawbreakers are and that all who enjoy this hobby
will probably suffer. It will be made to appear that we
out here are the problem. Do look closely at who the
violators of the law are...think! For 40 years this
crowd has run roughshod over the rank and file
out here...do wake up! Next election do help
purge this country of this lying mess we are
confronted with.

Leonard..

_____-

:Yes, I agree. However, I just don't believe this couple committed the
:crime. I think enemies of Gingritch were spying on him to get some dirt.
:They found some and wanted to get it to the public right away. But how
:do you do that without getting in trouble and risking bigger scandal for
:yourself for breaking the law? Do you have your operative hand over the
:tape to the FBI and tell them he got it while following Gingritch around
:in a van with lots of antennas on the roof and sophisticated
:cell-tracking equipment inside? No way. You get some innocent-looking
:elderly couple devoted to your cause who agree to take the fall. Buy 'em
:a cheap scanner, let 'em play with it for a day or two, give 'em a copy
:of the tape and promise them you'll do what you can to lessen any
:negative consequences.

Well accualy if your house is grounded correctly the center ground pin that
is connected to the computer case is also connected the the pipes and inturn to
the earth ground.
so it dosent matter.

My Pro-2042 died today...only had it for a week!

My question is do I replace it with a 895XLT or 9000XLT?

I have a few questions about these too....

895 you cannot override the preset mode for certain freq ranges....
Can you with the 9000?

Also, is the 9000 computer controlable like the 895?

A speedy reply is appreciated.

Thanks for supporting these newsgroups!

For a list of 10-codes, go to my page:
http://www.soltec.net/~jeffs/10-codes.htm

For an outstanding list of frequencies to put into your scanner, go to your local Radio Shack and pick a book called "Police Call Plus". It covers KY, IN, IL and WI, and you'll be absolutely amazed at the stuff that's in there.

Happy scanning!

>>DICK Kendrick wrote:

>> This is a rewrite of the bile you spewed for the Phony Amateur Radio
>> Goon-balls web page and the same propaganda you fed to Hamradio
>> Online.

> NO, it is truth Dick. Why is that so hard for you to accept?

Truth you say. Hah! You've been living in a blizzard of self-
delusion for so long Toilet Boy, you're beginning to believe
your own lies.

>> It's only one press release that got more mileage than it was worth,

> No, they were seperate write-ups.
^^^^^^^^ -- learn to spell moron

Separate write-ups, Puleeze! As far as your so called "articles"
go, you merely documented the antics of your goon ball buddies who
got lucky and caught a jammer. Big deal. I read the trash from the
PARG toilet paper of a web page, the ARRL Letter item, and HamRadio
Online blurb. You posted this infantile press release to the PARG
web page. From there, an inflated copy of the same data went to
HamRadio Online and to the ARRL. HamRadio Online did you a favor
and posted it on their web page, lame grammar and all. Not the
caliber one would expect from someone who held a Masters Degree.
But, then you don't have a degree, so that's to be expected. The
ARRL had to extensively edit the piece into a more presentable and
coherent form and included the information in the ARRL Letter. It
did NOT cite you as author, only as the source of the information.
Reality creeps in when you least expect it bozo, get used to it.
Inflating the same piece of drivel and trying to call it "two
articles" is a fantasy. It's still a single press release from a
local club, nothing more. Trying to claim any more than that is
just a Prozac induced hallucination, something you're full of these
days.

>> You still haven't provided any real information regarding real
>> articles, and you failed to prove your degrees.

> I have proven the articles beyond doubt. You refuse to accept
> what would be simple fact to anyone else.

Your claims to have been published by the ARRL and other technical publications are baseless. As shown above, the ARRL only cites you as a source, NOT author. You never did produce evidence of real articles in any technical publications. Gee, that should include hobby publications like QST, 73 Amateur Radio, CQ, Popular Electronics, Elementary Electronics, and Wireless World. Or how about professional publications like RF Design, Microwaves and RF, Electronic Design, and Mobile Radio Technology. Not a one. Come on, Toilet Boy, tell me some more lies. I used to be cynical about your lying, now it's just amusing. The only thing you've proven to anyone is that you are a LIAR.

> Regarding my degrees, as I told you before if you will hold Bill
> Cheek to the same standard as you want to hold me then I will
> comply AFTER he does. Bill Cheek was asked for proof of his
> degrees over a year ago & he STILL has shown NOTHING. But, you
> will not hold Cheek to that standard because YOU are an ass kisser
> to him & you could NOT stand to hear the truth about your knight
> in shinning armour.

Your issues with Bill Cheek have nothing to do with me. Never has. Using those issues here is just an excuse to hide behind the fact that you don't have the degrees you claim and are afraid of being found out. It's just more of you limp lies for you to hide behind. Cheek has the degrees. Last year, that's right LAST YEAR, I was able to verify Cheeks academic credentials with absolutely zero difficulty. How about the United States Armed Forces Institute, Madison, WI; San Diego State University at San Diego, CA; and University of Colorado at Boulder, CO for starters. The professional credentials exist also. You want the same standard of comparison used on you that is used on Cheek? OK, smegma breath, you've got your academic data on Cheek, now cough up the data on yourself.

The issue here is you have made claims about yourself. I say you are a liar and I have challenged you to prove them. You claim Bill Cheek is a liar, so take it up with him. Whatever Bill Cheek is or is not, is irrelevant to this situation. I say YOU are a liar, and I'm challenging YOU directly on your claims. The two are separate issues. Trying to blur the issues is a poor attempt on your part to avoid facing the truth and answering my challenge. The truth is that you are a LIAR and don't have the degrees you claim. Your continued avoidance is further proof that you cannot back up your claims and that you are a LIAR.

That's the truth Toilet Boy, so show some courage, face the challenge.

>

(big time snip)

I have been quietly watching what I now call "The Great Mackey-Cheek
Affair of 1997" and have come to the following conclusions:

1. John has no life on this newsgroup outside of taking potshots at Bill
Cheek. I have been a regular here for six months and have NEVER
personally seen John make an effort to reply to legitimate questions
posed by newbies or others, or further the scanning hobby in any way.
Mr. Cheek on the other hand, has written numerous books about scanners
that have benefitted tens of thousands (including me). Through this
group, Mr. Cheek also gives away, FOR FREE, advice and knowledge that,
in any other forum, would cost the average Joe serious $$.

2. Mr. Mackey makes numerous accusations against Mr. Cheek, none of
which negate Cheek's obvious success and expertise. Whether you
personally like Bill or not is irrelevant...the man knows what he is
talking about and even those of us who dislike him cannot deny that.

3. As someone who EARNED a high honor from a respected university, I
totally agree with the hypothisis that people who EARN such honors show
them off freely (Me? English etymology, Northern Illinois University,
1989, in the unlikely event that you care). Also, it is commonplace in
academia for schools to consider such data public information,

generously given to anyone who asks. If Mr. Mackey was as learned as he claims to be, he would know that. All he needed to do was supply the name of the matriculating school and year of graduation (you don't even need to know the degree earned), and the alma mater in question will verify the credentials, usually over the phone. So the excuse that "I'm 100 emails behind" is a bunch of crap. John's simply stalling and the reason is as obvious as air.

4. Just for the hellofit, I went to the ARRL web page and entered "John Mackey" as a search phrase, figuring that if he was what he claimed, there woud be SOMETHING there. There were ZERO matches. Nothing even close. Fill in the assumptions yourself. My assumption is that, aside from (possibly) sending them a few checks and (possibly) a letter to the editor, the ARRL has never had any significant dealings with John.

5. Bottom line: Mr. Mackey has loudly proclaimed his presumed "expertise" but has thus far given nothing but excuses as to why he cannot/will not volunteer even the smallest shred of evidence to back his claim. That is a deep insult to those of us who actually WORKED FOR and EARNED the titles we hold. Conversely, Mr. Cheek's expertise is well-documented and needs no repetition from me. I have no alternative but to classify Mackey as a misguided soul who, for reasons known only to him, has made a part-time (?) career out of hacking on people in general and Bill Cheek in particular. In light if this, I only pray that he sees what an ass he's been and redeem himself in public the same way he made a fool of himeself in public. It's never too late.

Flame if you want...but in keeping with a personal policy, this is my first and only public statement on this issue.

No biggie. Just my opinion.
Charlie

As a longtime scannist with 16 years on the grind, I have but one question: WHAT IS A "CELL TRACKER" AND HOW DO I GET ONE? Better yet, I'd like to know why "the government" gave back this mysterious and magical device after they (presumably) used it to break the law.

I agree with you, Bill. This guy's pullin' our puds!

Don't try to con a con. Been there. Done that. Probably more than once.

Peace,
Charlie

437. Scanner Programming Instructions ?

Newsgroup: rec.radio.scanner

I have a Uniden Bearcat BC 200 XLT hand-held scanner. Since I purchased this unit, years back, I have not been able to "really" program it at all, using the "lousy" fold-up sheet instructions that came with it. Does anyone publish or print-up booklets that can help me program this unit ?? Any and all assistance will be greatly appreciated.
Thanks,
Andrew

438. HamNet Forum now available on WWW as part of "C from CompuServe"

Newsgroup: rec.radio.scanner
Date: 1998-01-04 00:00:00 UTC
From: Scott Loftesness <sjl@compuserve.com>
Message-ID: <#S4zorYG9GA.334@nih2naab.prod2.compuserve.com>
Source record: 174843

The HamNet Forum on CompuServe is now available to anyone who has Internet access and either Netscape or IE 3.0 or higher. In the past, you had to have a CompuServe account in order to get into Forums. Now, as part of a project called "C from CompuServe," there are over 500 Forums accessible from the World Wide Web, including HamNet

HamNet is one of the oldest communities of amateur radio, shortwave listeners and scanner enthusiasts in cyberspace. Begun in 1981, HamNet was one of the first "forums", or online discussion groups, on CompuServe's original "MicroNet" service. Today, HamNet has 23 message sections and file libraries, covering all aspects of amateur radio and related electronic hobbyists interests.

There are three levels of participation available with the new "C from CompuServe" service. Guest Membership provides read-only access to the HamNet message board, and is free.

Limited Membership is also free, but allows you to enter some of the CompuServe transactional areas and databases. You download a "Virtual Key" plug-in for your browser that allows CompuServe to recognize you. In addition, Limited members can pick one Forum for full participation at no charge. In other words, if the only thing on CompuServe you're interested in is the HamNet Forum, Limited Membership means you can fully participate in HamNet, but only HamNet, for free.

Finally, Full Membership allows complete participation in all 500 Forums, for a monthly fee in the future of under $10. However, during the introductory period now underway, Full Membership is also available free of charge with a 30 day notice being provided to you prior to the monthly fee being imposed.

To check out the HamNet Forum, point your browser at this url:

http://www.csi.com/go_c.asp?PIN=HamNet

It'll try to recognize you and then deny access unless you have Virtual Key (IE4.0 for the Mac comes with it), and take you to a signup screen. You can either select "Free Preview" for read-only access, or download the plug-in and sign up for membership. Full membership is now being offered with the free trial mentioned earlier

By the way, if you're already a CompuServe member, "C from CompuServe" is included in your CompuServe membership at no additional charge. All you need to do is download the Virtual Key software, configure it with your userid/password, and you'll be ready to take full advantage of "C".

Please send me an email if you have problems with it, or there's something I can help you with.

Scott Loftesness W3VS
Chief SysOp, HamNet
Email: sjl@compuserve.com

439. John Mackey must be dead.....

Newsgroup: rec.radio.scanner
Date: 1998-01-04 00:00:00 UTC

Message-ID: <MPG.f1a25645beea315989699@nntp.a001.sprintmail.com>
Source record: 174844

On the 26th of December, I posted a very simple question to John Mackey -

"Hey John -
I'm looking to improve the HF performance of my R-10. Which
portable antenna would give me the largest performance increase in the
.5-30 Mhz? Thx"

John Mackey has yet to respond. From his lack of response, and the
nature of his other posts in this NG, I can only assume that his only
talent lies in belittling others. For the past two months, this is all
he has done. He can't even answer a simple question. As much as some
people dislike Bill Cheek, I'm sure he would have at least answered a
general question like that directed to him. In my opinion, John Mackey
is a pompous windbag, who does nothing but waste bandwidth. Welcome to
my kill filter John.....

It is also possible to do it with a 6 ft Dish (as long as you are not in high TI[Terrestrial Interference] area. Most commercial C Band LNB's run from a range of 3.2GHz to 4.2GHz. A good C Band/ Ku Band Satellite System will run you $ 1500 - $ 2000 (yes, it is an expensive toy, but the highest cost of that system is a good satellite receiver. I would recommend a DX or Drake receiver for the purposes that you want to use it for, has they have extended audio ranges. You also might want to try and find a used Chaparral Monterey 90 IR/D Satellite Receiver. The Monterey's have the best audio control chips on the market, unfortunately, Chaparral does not make them any more.

I hope this answers some of your questions.

If you need more info - please send e-mail to enterdev@aol.com

Message-ID: <34B06356.6904@pacbell.net>
Source record: 174847

I need any information on a handheld frequency counter that I just acquired. The name on the front is "Wisher" with a model designation of WFC-308. This device has two BNC connectors, one marked 20-1200 MHz and 10 Hz-20 MHz, a power switch, which also selects which range to select, and a three position switch to select the gate time. The label on the back has no manufactures information at all, only information about the battery life/recharging information and a statement that says: "Remote testing through antenna". It is yellowish-orange in color and its size is: 1 1/4"x 3" x 4".

I am looking for techniclal specifications and user guide info.

Is this a "near field" device?
Is it the equivalent to the devices put out by Opto-Scan?
Does the "Remote testing throught antenna" mean that I can read any stored frequencys (if it does indeed remember anything it does)?

The device I have does appear to have some near field capability as I have use my HAM 2 meter and 450 MHz radio to test it on these 2 bands.

Any information would be appreciated.

Message-ID: <68ptb7$asv@bgtnsc02.worldnet.att.net>
Source record: 174849

The customer frequency for 154.540 is 33.400.

The most common frequency pairs to check are:

30.8400 --- 154.5700
31.0000 --- 170.3050
33.1600 --- 154.5100
33.4000 --- 154.5400
35.0200 --- 154.6000
154.5700 --- 170.2450
154.6000 --- 171.1050
457.5375 --- 468.3875
457.5500 --- 467.7750
457.6000 --- 467.8250
461.0375 --- 466.0375
460.8875 --- 465.8875
461.0875 --- 466.0875
469.0125 --- 464.0125

If they're using "3M" or "GM" headsets then you need to search
from 920-922 Mhz Wide FM for the speaker frequency and from
903-905 Mhz Wide FM for the headset frequency.

An ariticle on Fast Food monitoring appeared in the August 96
issue of Monitoring Times. It can be view online at the

Some of the drive-thrus are very low in power and can't be heard
beyond the range of the parking lot. You may want to take a little
walk to see if you can hear it from parking lot or better yet inside.

By the way, alot of the newer drive-thrus will only transmit if a
car is present at the drive-up speaker.

I have a mint pro 43, the only thing wrong with it is I dropped ot off
a two story building. It has a piece of the case missing the LCD is
cracked and I can't find the antenna. If you turn it on it may or may
not work but I have the owners manual and the original box.
$250.00 :->

Does anyone know of a good place to look for US scanner laws?
So far I have browsed the Telecommunications Act of 1996, looked at
FCC fact sheet on "Interception and Divulgence of Radio Communications"
and looked at the Fed laws (Title 47, Chap. 5).

Does anyone know of a good repository on scanner laws or additional laws?

IF you need a price....shop them on the web....
If you called the 800 number which is for ORDERS only, and expected an order taker to play 100 questions with you I can see why you were left hanging.
I have ordered from them a number of times.....always knowing what the price of the C.O.D. would be before I hung up.
Where you actually going to buy?...if you're just "browsing" try the web...all the prices are there.

I too had the problem with the wires that were mentioned earlier, I also installed my board with missing hardware. It seems they there seems to be a lack of quality control at Optoelectronics. However, it would be nice to if they would rewrite the manuals and and trim off the connectors themsel ves. Trimming my connectors was a scary and painstaking process. My installation for the board, was 5 hours longer than mentioned in the installation manul. Again most of my time was taking on the connectors, and finding substitutes for the missing hardware. However my PROBE software is the best I could find and I have purchased others that were Windows based, and they were full of errors. So sttick with Probe and you and your wallet will be much happier. One word of advice when you get your board running, make sure the connectors are firmly all the way down the pins on the baord. My connectors walked up the pins about 6 months after installation, and my "normal" scanner memory kept getting cleared. Boy, oh boy, was it a pain to reprogram 400 channels in that scanner every three or four days. I finally got frustrated and snooped around on the inside, and found that one of the connectors was not fully seated. I pushed it back down and no problems since.

Just food for thought what are your speed settings?
Mine are 75MHZ Pentium, 19200 baud,
Probe: 11 ms scan speed, 3 ms false signal delay
Which results in a Probe Scan Speed of 59 channels a second.

I have had more bad experiences with ACE then good. Here are some in breif.
Purchased AR2500 From them that was bad (not their fault just the radio) Took over 2 months to get my money back.
Purchased AR1000 from them. Unit came but would not recieve any signals at all. Sent it back and got a second unit that was someone elses return. (was full of frequencies) I called and got a "Huh thats funny" response. Sent AR3000 in for repair because it just quit working. They charged me $65.00 to open the radio and press the reset button. I can understand the charge, but they never found out what was making the button blow in the first place so I paid $65.00 and had a radio that I had to open up and press the reset button about every week. I ordered a DC cable for the same radio so I could use it in the car. For over two months I called every week and was told it would be in next week. Then the Tech guy was going to make me one. I waited another month then just ordered a AC plug and made my own. Twice I sent AR2500 radios in for repair. The first one tuned off frequency. I sent it in and got it back in less then a week, but they did not fix it. They charged me, but it still was off frequency. I sent it back and when it came the second time it did not work at all!! I sent it back again and they fixed it for "NO CHARGE" Wow big deal. Just a few months ago I sent another AR2500 in for the same problem. They said it would cost $65.00 and take a week and a half. They had the radio over 3 months and charged me $80.00 I might be the only one who has had problems with them, but I feel they are pretty major.

Well I work for American International Airways. I do scheduling and route planning. I am into
commercial aviation, so thats why I montior airband so much. I have never really monitored the
HF bands becuase I never bought a good antenna for clear listening. I hope to someday. Any particular band you like a lot?

465. Re: medical codes

Newsgroup: rec.radio.scanner
Date: 1998-01-04 00:00:00 UTC
From: Andy Ulrich <ulrich@null.net>
Message-ID: <68ojr4$eg5@bgtnsc02.worldnet.att.net>
Source record: 174991

Unfortunately, there's no easy answer.

The codes that ambulances use seem to vary greatly from one EMS service to another. Many police departments seem to use de facto standard 10-codes, but not many of the medics. Some states have "widely used" codes, but the service you're interested in may not use them.

A couple of things you may want to try:

Get a copy of Police Call, available at your local Radio Shack. It's got SOME of the codes for medics -- so you may be lucky, especially if you're near or in a big metro center.

Ask your Radio Shack folks. Sometimes they know, although this was more true 10 years ago than it is now.

Post a request on this newsgroup for the specific ambulance service(s) you're looking for; maybe someone's got them.

Use an Internet search engine and look on the Web and Usenet for the info. But that's not likely to work, either, unless you're in a big city.

The best method will probably be to monitor, take notes, listen to the police and correlate their calls to the ambulance calls, and so on. Lots of work, but when you do finally get most of all of the codes, it's pretty satisfying.

Good luck.

Andy Ulrich

Phil, I had no idea this was you. And again, as a contributor to my information file, you are a gentleman and a scholar. It seems as though a 'third party' wants to police the relevance factor of posts here. I wish you nothing but success in your endeavors. My Windows program is of low priority but in progress. It won't be done anytime soon. I intend to play with the DOS version some more and maybe make a conventional scanning variation of it as well.

Best of luck,

> and dignified with me. You've been on the attack for two

Here we go again. I have not called you any names or insulted
you in any way yet you call me a "pissant", and in the same sentence
you say it is impossible to demonstrate class & dignity. THAT
is how you just negated any class or dignity, by using such
a word. Bill, if you could just make some changes in YOUR
interactions with others you would be less irritating to
the users on this NG & would make life much easier for
yourself.

> I have no interest in any dignified interaction with

Given your actions with people here & on fidonet, it is
becoming obvious that you have no interest in
dignified inteaction with anyone.

> > Why is it that you can't come up with solid issues to prove your
> > accusations & can only find childish names to call people?
>
> You are not "people". There are no "solid issues" where you are

There are many others besides me. For example you do the same
things to Peter Boe (making up your lies & stories in a pathetic
attempt to make the person look bad). You have done the same to
others.

> Nooo, not your real kids. But your squaw's kids .... ???

Batter 2, strike one. I am not dating anyone with children
either Bill. Why can't you just give up the stories, you
are simply hoping for a lucky "blind" hit.

> Play on words. Asylum. Insane sanitorium. Whatever you want
> to call it. I don't care. You're still a vile, despicable,

Strike two, I have never worked in any of the above facilities
or ANY typed of residential care facility!

>You want a change? Show me.

Strike three, you're OUT.

Bill, YOU have to change. YOU are the common thread in all these problems.

As some of you may have seen, we have released a shareware program titled PC895 (available at http://www.ipxnet.com/home/enterdev/bc895.html). I would just like to take this opportunity to thank everyone who has taken interest in our program. Just a few quick notes :

1) On Saturday, over 3,000 people logged into our site at once to try to download the software. We have moved the software to a new server which can handle the high demand. There should not be anymore problems with downloads. If there are, please send E-Mail to enterdev@aol.com and we will fix the problem as quickly as possible.

2) We greatly appriciate the reports of bugs and glitches in the program. We encourage you to E-Mail us with such problems, so that we can correct them immediately and post a patch on the web site (patch01.exe is now available to correct the Open COM Port Error and the Run-time '8012' error that was generated). Even though we have entensively beta tested the program before its release, someone will manage to hit a snag, and we want to hear about. You e-mail will be returned in 24 to 28 hours maximum!!!!

We want PC 895 to be the best program there is, but we cannot accomplish this without out your help and feedback.

Thank you for your interest and support of PC 895.

Adam Goldman
Vice President - Technical Services
EnterDev Software

Is it a fact that the dim setting prolongs the life of the EL panel?

If you ran a dim vs. a bright continuously until they quit how would
the lifespans and results differ?

Both will do a good job on receive. The problem with the VX-1R is you can not scan a mix of frequencies. You can scan VHF-Hi or UHF etc but not at the same time.

The Ft-50R will scan any frequencies entered. My problem with this radio is lack of coverage in the 225-300 mhz range.

Good luck,
Ed

Source record: 175015

Mark:

I had a FT-50R, and sold it. I currently have a VX-1R, just got it a week ago. I really like both radios. The FT-50R has the advantage of much higher wattage on the TX side, if you're a Ham. The WFM (Wide FM) filter in the FT-50R is not suitable for T.V., and broadcast FM listening, where the VX-1R does an excellent job at this! Plus the VX-1R provides the standard AM broadcast band as well, but you need a LONGER antenna than the one supplied... no fault of the radio. Audio on both is amazing for their size! As I recall, the FT-50R was 60 CH, and the VX-1R, can be close to 200, depending on how you program it. Scanning speed is acceptable, can remember exactly what it is.
Reception is quite good!

Bill Crocker

It's probably to do with the serial port FIFO buffer.
I think you can switch this off in Windows '95, but
not sure how.

Do you really need that sort of speed?

All the best for 1998.

I've been doing business with Grove Enterprises from the first days Bob moved from the Ft. Lauderdale area to North Carolina. I can't think of a single time I've been unhappy with the company.

Back in the old days before FCC licenses were available electronically (unless you could read nine-track mainframe tapes and were prepared to shell out big bucks), computerized databases didn't exist, the Internet was unknown outside of academia and computer bulletin boards were years in the future, Bob was the guy I'd call when I needed an obscure frequency in a hurry. Particularly if it was a federal agency better known by its initials.

Sometimes the person who answered the phone would tell me that Bob was at lunch or out of the office, but he's never failed to return my call.

He's also been a good source of information when I've been deciding what equipment to buy. I've never had a qualm about asking Bob for advice about something he doesn't carry. There was once when I was prepared to pay up to the high four figures for Motorola to engineer an antenna solution for a specific monitoring application. I ran the proposal by Bob and he told me that their solution not only

wouldn't do what I wanted, it would actually filter out the very frequencies I wanted to hear. (Motorola is a great two-way radio manufacturer, but they are more used to folks who want to notch out everything except the specific frequencies their radio operates on. They are thrown for a loss when you want broadband scanner coverage).

Bob not only kept me from making an expensive mistake, he came up with a solution that was so cheap I was almost embarrassed to submit it to management.

If you have a beef with Grove Enterprises, I echo the advice to give Bob a call directly.

I'm sorry that you didn't get what you ordered by Christmas, but I can't let go unchallenged the contention that Grove is disreputable. He may not be perfect, but he's on my short list of vendors I turn to for radio advice.

And, for the record, I have no direct ties to Grove Enterprises. (Except for the $500-plus order I placed with him a couple of weeks ago.)

Go here:
http://www.erols.com/jcardani/sjscan1.htm
The NJSP use a 800mhz trunked system. They have a Troop A, B and C - north, south and central Jersey, respectively.
At the South Jersey Scanner Page they have all the freqs. I think its 12 freqs for the trunked system. I am sure that the GSp troopers use the same sys as the rset of the NJSP.

>in AM mode? Most of the Realistic scanners that I've had in
>the past only all Narrow FM in the is band and will only
>switch to AM in the 118 - 136 Mhz band.

PRO-26 is "programmable" with AM, NFM or WFM on any frequency so no
problem on the Mil Air side for AM.

>Do you know if the Pro-43 and BC-2500 allow you to monitor
>225-406 Mhz in AM mode? I know the ICOM R-1 and AOR AR-1000 do.

PRO-43 was AM & NFM on any frequency whilst the BC-2500 also had WFM.
The PRO-43 did not have programmable step sizes though.

The PRO-60 which is the "nearest" follow on to the PRO-43 also has
programmable modes but not step sizes.

Have fun.

Cheers,

Just a little follow on....

The AR2700 isn't available "as such" anymore but the same radio is still
available as the CAMNIS HSC-190 or Trident TR-2000 badges.

A version with SSB and smaller step sizes was also produced but this was
never available as an "AOR" model.

All the best

>Shack tells me it could be up to $75 to fix. If I buy a new scanner,
>what models/brands are a good buy w/ all the goodies? Also, one that
>includes MIL AIR 220-400 Mhz.

If you like the PRO-43 (and there is no reason not to) then its still a
fine receiver for the Aviation frequencies.

If your keypad has started to show signs of age and be a little erratic
it is quite simple to swap yourself if you are happy taking your set
apart. There is a little soldering but nothing very series if your happy
taking the back off. Remove a few screws to remove the RF boards, a few
more to lift out the Logic Board and then just swap keypads - put all
back together.

Only soldering is the BNC connector pin to RF Board and one earth strap
on the Logic PCB.

A new keypad for RS National Parts will probably be around the $10 mark
and even if you go very carefully the whole job shouldn't take more than
30 minutes.

Hope that helps.

I am responging to the person who was complaing about the interference on his scanner and computer. Try this: There are some companied that make what are called low and high pass filters. Try these out on your scanner. It should take at least some of the interference away. :-)

The used scanner market is wacky. I bought a flawless PRO-2004
for $100 and am asking $175 (free US shipping) for a flawless, modded
PRO-2022. Go figure. The 'net is a very convenient way to shop.

I've been trying to compile the v3.42 code in Microsoft Visual C++ version 1.5, but have not been having any luck. I have been using the Borland C++ package for my programming applications in the past, so I'm not familiar with the compiler options for Microsoft's package. Are there any special compiler/linker options which need to be set to get this to compile? The code compiles with no errors, however I get multiple error L2029 - unresolved external errors when I attempt to build the exe file. Any assistance you can give me would be greatly appreciated.

Thanks,
Bill

All software can be a problem under the right circumstances. WIN95
does what NO other OS can do; run modern software and 99+ percent of
every program written for the PC, clear back to the original 8088 and
the original DOS, and do it with speed and a minimum of hassle.

Can your MacOS do that? Of course not.

Geezus, man....that WASN'T "fun". You were calling
others ignorant and exhibiting it your own self. That's
kind of ballsy.....or stupid.

> > And I most assuredly will point out your defects
> >when you take such license to point out the defects of others.

> Look man, take your schooling somewhere else.

I have taken it straight to where it's needed most: YOU, pal.

> Do you always do this. Instead of keeping to the topic, and
> giving a intellegent response, you go after the person when
> they never even did anything to you?

I kept to the topic. You called others ignorant. And you
attacked a decent company populated by a lot of decent people.
And you had no good reason to do it. So, since you showed
you could just up and disk it out, it became my job to see
if you could TAKE it.

Guess I found out. You sure don't like the heat sent
back your way, that much is for sure. You feel you got
the right to express opinions of others, and are immune
from others expressing their opinions about you.

That's one-way, pal. I don't do one-way shit.

> I attacked people who worked for Microsoft, not people who use
> Windows. You changed that around about 13 posts ago, and keep
> rambling on about something that was never said.

You can't change what you said. It's all there in blue
on white.

> >Don't gimme that 'attack' shit. Ol' "Bill Masters" of

> >That's fair.

> Never did I jump on ignorent people. Once again...rewriting the subject.

Aaaarrrrrrrggghhhhhh! This ain't like speaking, you know,
where one can say they didn't say that. It's all there
in your dumbass post. Here I will show you:

> Let me explain something here. For one thing if anyone feels that
> Bill Gates has worked and created his success, you need to backup
> what you say.

That's the first nonsense that you spewed. But Bill Gates being
worth 40-billion can take care of himself, I'd say. But you go
on to drop your knickers and spout:

> Microsoft isnt smart, they are just progressive to the ignorent
> computer user. Linux, OS2, Unix, Solaris, and others are far more
> superior to Windows. The only problem is that people are lazy.
> Windows is for the ignorent fool.

You said all that shit, man! Came right off your booger-picking
fingertips! You attacked Microsoft. You attacked "ignorent" people.
You attacked Windows. You attacked people. And you called most of
the people on this newsgroup "ignorent fools". You DID all that, man.

But you weren't done. You reared up and gassed a bunch more before
you were done, and none of it was based on fact.

Sheesh!

> >> No shit it's a scanner forum.

> >Ahhhhh....do I detect a spark of intelligence?

> I hope so.

However, a paragraph later, we found out it was a dry spark.

> >Nevertheless, if YOU hadn't responded to Bill Master's slam dunk
> >on Microsoft, then ..... Don't blame HIM for your actions unless
> >he controls you somehow.

> I didnt respond, I followed up with my own. Then YOU responded to me,
> but instead of contructive critisism, I recieve attacks.

Well, you weren't constructive in shitting on Microsoft and
on people who use Windows. You attacked. So why can't you
BE attacked and shat upon, too? You dish it out, you oughta
be able to take it, eh?

> >> I said Windows was made for the ignorant computer user.

> Exactly. Now lets get to what I said. Target Market.

Nooooo, you did not originally say "target market". And
later when you did, even that was wrong.

> Their target market mostly is people who are new to computers and

That's bullshit, man. I am a master computist, and Microsoft's
products are targeted directly to me, too.

> wish to enter into the new world of computing and communication.
> Yes of course they target all computer users. But majority goes to
> the less informed computer user.

Oh for Pete's Sake! Well....let's look at the English language.
It's the most widely spoken language on the planet now. Since
a few billion people speak it, and many of them are imbeciles
like you, does that mean that English is for nitwits? Well,
the French might laugh and joke about it.......

Your point is hollow and without merit.

> >> Opinion. Not an attack. Opinion. Just venting my feelings.

> I vented my feeling about Microsoft. Not about YOU.

Yeah, so? Microsoft didn't get on here and vent their feelings
about YOU, did they?

> You dont work for Microsoft. If you did, then I would apologize
> for offending you.

So what? Microsoft didn't come looking for you. And Windows
users didn't come looking for you. You went looking for them.
So I went looking for you.

That's fair.

> >It *is* necessary to do your own thinking.

> Well Mr.Cheek you are very right. You have every right to vent on me
> all you want, even though I never attacked you. But hey, fine with me.
> I can bash back and forth with you forever, but Im not going to.

Cool. I can pee real far. Farther than you think.

> Microsoft did not bring the Internet to the public.

Microsoft brought the TOOLS to access the Internet to the public.

> Online services brought Internet to the public.

Not until the public had the tools, pal. There are never any
services or products until there is a demand.

> I used the internet before there was graphical ppp accounts.

So did I. But we were in the extreme minority.

> Microsoft was not the reason I bought a computer either.

If it weren't for Microsoft, you might not even know there was
such a thing as a computer.

> I am not on any bandwagon. People have the right to complain
> about anything.

Sure. To their wives. Girlfriends. Dogs. Preachers.
But when you snivel out in public, it's a little different.

> Usually people don't complain unless they have a reason to.

That is not true. This world is full of chronic complainers.

> You don't intimidate me, and no body else. I get a kick out
> of this.

Me, too. I got me a great big fat monstrous woody for the OS/2
mindset who can't keep their zealotry down to a dull roar after
losing the great battle of the OS's. I put up with their anti-
Microsoft and anti-Windows bullshit for five years. Way back
then, I told the pricks they were on a losing team.

They lost.

It's time to cut the bullshit and each person just use whatever
the hell they want to use and let it go at that. The winner

has done won. And now if there is any more bullshit, it's going
to be the government who wins.....and we sure don't want THAT!

> So anyway, besides all the trash and garbage, how about we talk
> about radio scanners. Sound Good?

Sounds like a plan to me. I'd sooner shoot the shit about
radios and radioing as anything, but it's hard to resist a
good peeing contest when there's a chance at one.

> Thanks Mr. Cheek for enlightening my holiday. I enjoyed the argument.

Quite all right, don't mention it. I enjoyed the hell
out of it meself. This ain't the sort of place to be
doing a whole lot of hugging and kissing and swapping spit.

> Marc Hookerman
> Airband Scannist Extraordinaire
> Asshole

I always knew airheads were pretty far out there. Assholes
are a given. For every dude on this planet, there's an Adam-Henry.
But airbanders .... well...

Hey, I better shut up. Me and airbanders never did get along
all that well.

;-)

1. Find Q20
2. Find R71
3. Remove R71 or slit a trace going to it.
4. Better still, slit that trace and then wire
a switch across the cut so you can turn the
beep on and off.

Sometimes, the beep is desirable.

I, too, have done business with Scanners Unlimited, and been very
pleased.

As with everything else, their Area Code has been recently changed, and
the resultant new phone number would be (650) 573-1624.

San Carlos is south of San Francisco, on highway 101, about twenty
five miles or so.

You're talking about LOOKS. Apple sued Microsoft for that
and lost their ass. Down underneath in the engine, it's
a lot different.

> windoze95, (I hear) is a ROYAL pain in the ass,

Well, it isn't. Not when you really want to get down
and get some real work done. Win95 lets you do whatever
you want to do. If you're a green weenie, you can still
use it. If you're a salty expert, you can fly with it.

Source record: 175043

What sort of trouble are you having? Does the scanner operate
properly when not connected to the computer? Does it work properly
when connected to the computer, but intermittently?

I purchased this same setup towards the middle of December, and by and
large I was disappointed with Optoelectronics. I felt the
installation manual was poorly done and needlessly hard to follow,
with the installation itself more difficult than it needs to be. For
example, the manual suggests trimming the connector cables so that
they fit better with the connectors in the scanner. So why can't
Optoelectronics trim the connectors? It can't possibly take very
long, and unless the customer has an appropriate tool, it isn't very
easy to do. (Precision wire-cutters work nicely.)

My first board would not work, and I am experienced with electronics
and kit construction. I installed the board very carefully, turned
the 2006 on, the scanner wouldn't work. I removed the board, turned
the scanner on, the scanner worked. I installed the board a second
time, from scratch, turned the scanner on, the scanner wouldn't work.
Removed the board a second time, the scanner worked. Clearly a trend
there. The next morning I called Optoelectronics, and after a brief
exchange with a technician who was dubious at my claim that I had made
the installation properly, and had triple-checked everything, he said
to send the board back, which I did. A week later I receieved a new
board, along with some hardware missing from the first kit I got. No
note of explanation or anything else along those lines, except for
another bill of sale documenting the return. I installed the new
board just as I had done before, turned the scanner on, and it worked
fine. Fired up the computer with Probe and it worked fine too, no
problems. (I knew it was a new board as I noted the serial number on
the old board, and the old board had some flaws in the lamination of
the circuit board, although it did not appear to affect any of the
traces themselves.)

I was more or less satisfied with the outcome, although I was a bit
annoyed that the original board was clearly defective.
Optoelectronics claims to test every board before it leaves the
factory, which may be true, but either mine managed to slip trough or
they don't test by hooking up boards to a working 2006. My limited
satisfaction evaporated when I took a look at the return bill of sale
with the new board. It said "SWAPPED WITH UNIT 021058. NO PROBLEM
FOUND WITH ORIGINAL BOARD". This was demonstrably not true! I doubt
they even bothered to check the board I sent them -- they probably
assume that all returns are the fault of the customer's installation.

I would be interested in other people's experiences with Optoelectronics and their 456/535 kits, pro or con. Until my dealings with them I had heard almost entirely good things.

Anyway, back to your problem. Optoelectronics claims that most of the installation problems are with the cables, so I would check those first. Also make sure that you have connected the correct wires to their respective places in the scanner. The manual helpfully mentions the "Audio" and "Analog" wires, but fails to identify them by color, and when the board is installed you can't tell by looking which is which. (Audio is Blue, and Analog is Orange, by the way.)

Once you get everything working, it is an extrememly nice setup. Probe takes some time to learn and get comfortable with, but it is very powerful. Finally, my sympathies to whomever gets OS456 S/N 745077 -- I don't suppose it is you? :)

Good luck,

--Jason

>Please respond via E-Mail

I just bought a Pro-90 this afternoon and, if such a short eval time means anything, I'm very pleased with it so far. I've punched in some local trunking systems and am amazed at all the stuff I've been missing on my faithful but non-trunking Pro-60.

From everything I've heard, read, and experienced the Pro-90 is manufactured by Uniden for RS and is therefore 100% functionally identical to the Uniden/Bearcat BC235XLT. The RS model retails for about $50 more than the best prices on the Uniden model, and the Uniden comes with an extra battery pack and a charging cradle. (Note that the Pro-90 _does_ come with a charger that plugs into the scanner, but it's not able to charge a spare battery pack at the same time.)

So why did I buy a Pro-90 instead? Well, it's on sale this month for $249 (ask the salesperson to check the price for you if they haven't posted the sale price yet), and I had a birthday certificate good for an additional 10% off this month, so it was a pretty good deal. And since it's only 15 minutes form my home, I didn't have to worry about S&H charges or additional hassles if I decided to return it, unlike the Uniden. I also decided to get the extra RS 5-year extended warranty, which has come in handy with some other portable equipment of mine in the past.

Most everyone is annoyed by this dolt at one time or another. Either
directly, as in your case or just by reading the drivvel he posts
here.

You will find a few others of his ilk herebouts. They wallow in the
power to annoy in virtual saftey, those they would cower from in a
face to face exchange.

Best course of action is simply ignore him.
He don't amount to a pimple on a good mans ass.

Good Luck... LCM

This is not a wierd question at all. You will need all of the channels, voice and data (which changes, by the way, depending on the system). The system you are monitoring MUST be a Motorola system. The Radio Shack and Uniden Trunk Trackers will not work with non-Motorola systems. To get frequencies and other info for your area try logging onto the following web site:

http://www.bearcat1.com/fleet.htm

THis is a good place to start. Click on your state and see if your area is listed. Then follow the instuctions and enjoy!

Happy Scanning,

Jim

Ed,

You MUST program your trunknng freq's when in "trunking" mode! That is,
first press the "trunk" button and keep it pressed for about 2 seconds
(until you hear two beeps) THEN choose a bank, then program in all the
frequencies. If you enter the frequencies in regular mode, the radio will
not track the system!

Cheers,

Jim

I don't think the Mac's demise will cause so much as a
ripple on the pond, actually. The WinTel will be neither
better nor worse off - at least I don't see how there will
be much of an impact.

The Mac'ers and OS/2'ers were the religious zealots. WinTel
just went on trucking and never gave it much mind. The market
pretty much shrugged when Mac and OS/2 passed by.

A moment of silence - a tip of the hat - a raised mug
of ale, perhaps; maybe a silent salute. And we move on.....

The best man always wins..... until government gets involved.

THAT is what we need to fear. Government should always be
feared; leashed; and controled.....even caged.

Pity. Ours is on the loose.....

Well.....airbanders - airheads; get it? Kinda like Unix and eunuchs.

Just shittin ya. I monitor everything betwixt 365/86,400th's of a
Hertz to the frequency of cosmic rays.

I try real hard to not discriminate. Some resonant frequencies
are down in the mega-billionth's of a hertz. Near as we can tell, the
resonant frequency of the Universe is under 9.645061728395e-16 of a
hertz. And of course, we're dabbling with harmonics of the resonant
frequency of the Lawrencium atom at something in excess of
6.666666666667e+5 GHz.

It's ALL good. Just that some's better than others.

:-)

: I am not suggesting any prices for scanners!!! If you had read the
: disclaimer you would have noticed that these were average ASKING prices
: (not the absolute gospel) taken from the newsgroups (rec.radio.scanner,
: alt.radio.scanner, rec.radio.swap) during all of 1997. If you find a
: better deal by all means go for it. I myself purchased a PRO-2005 in
: excellent condition for only $160 while I was recently on vacation in
: LA. The AR2700 was previously on sale for $209. Many of the RS models
: are deeply discounted when they have been on closeout for a while. In
: fact I have bought ALL of my scanners when they were on sale (PRO-2035
: for $229; PRO-2036 for $179; PRO-2046 for $169; PRO-43 for $249).

Another example:I picked up a PRO-2026 about 2 months ago at a local Radio
Shack-it had been sitting on the display shelves for years!.
It has a date code of 1992-so it's CMT modable too.
The unit is in VG condition, except for the manual and the mobile
bracket(both missing).
The price? $70.00(plus local sales tax, of course)!
The store Manager even let me test it in the store before I bought
it...with a mobile unit, this can be a hassle.

>to comply with CLASS B emissions requlations.
>
I wish it was that simple.

All digital devices INTENDED for use in residential area must be
certified. if you use a device that was not intended for residential
use, you are slightly screwed, and a great deal of computer equipment
that is in use at home is NOT INTENDED for
residential use. Only laptops are assumed to be intended for
residential use, so all laptops must be class B.

Since class B is much stricter (read as more expensive to build
conforming products), many PC manufacturers, especially the secondary
brands, simply decide they don't intend to sell for residential use.
Nothing prevents the retailer from selling them that way however.

Most large monitors are not intended for residential use, and frankly,
a lot of smaller one are not intended for residential use, so they are
certified to class A. I have NEVER seen a monitor certified as class A
that actually met the standard, and I've been out on the test range
many times.

>But in reality.... put your receiving antennas as far away from you
>computer as you can and follow good engineering practice etc etc etc and

>this will drastically reduce your problem (assuming that when you move
>your antenna away from YOUR computer you are not moving it closer to
>someone else's !)

A good idea, but some monitors produce so much noise, this is not practical. The problem is the saw tooth wave form used for horizontal output. The power involved is watts, not milliwatts or microwatts, and the nice sharp edges on the waveform push harmonics out very far into the HF spectrum. On the range I have often had no trouble finding these harmonics and measuring them at 30 meters. (100 feet). Couple with lousy shielding on the monitor case, and you have a recipe for serious HF interference.

Really! When did I "boast" that I was "hot stuff" technically?

I am extremely competant as a technician, but I have never boasted
that I am "HOT STUFF". I am NOT that high on myself. You are
ptobably comfused with Bill Cheek who claims to have several
FCC licenses & Master level degrees & says he is the only
"ENGINEER" dedicated to scanning.

Please tell me when I boasted that I was "hot stuff technically",
including the date of the post so I may verify it.

> To refresh your feeble memory (you shouldn't double up on your
> Prozac so much), the first challenge was regarding your claim of
> having a Masters Degree. You were tasked with giving the name of

I would be MORE than happy to supply you with this data. However,
I expect you to hold others to the SAME as you are holding ME. Bill
Cheek was asked over a year ago to provide this has NOT YET done
so. YOU did nothing about THAT. As soon as you resond in same
to Bill Cheek & he replies, I will post all the info you request
on my Master's. If you do nothing then nothing will happen. It's
all up to you, DICK.

> On December 21, 1997, you acknowledged the challenge with the

Why are you bringing this up you FOOL? NO ONE has stated the challenge
didn't occur!

No it is VERY relevant. YOU were around when your knight in shinning armour Bill Cheek was challenged to provide proof of his master's & you did nothing. Now you want to hold me to a higher scrutiny that Cheek. Sorry, you are going to have to be fair & equal or I won't play your little game.

> The conclusions are quite simple:
>
> On point one: Considering the formidable effort that is required to

That is unfortunate. This reply is a plea to all your shareware distributors out there, along with some handy advice that has kept my concience clear all these years:

Please follow through with those users who pay for your program. The net is full of hackers and cheats who never pay for shareware, yet there are still honest people who believe in paying for the things they use. That is honesty that deserves rewarding - by providing what you've promised. Not doing so makes staying in business that much harder for the rest of us.

Remember: A satisfied customer will tell all of his friends what a great product he got. An unsatisfied customer will tell anyone who cares to listen why they should never buy your products. Never underestimate the power of word-of-mouth. (As seen here by this thread.)

Just my 2 cents,
Phil Smalley
Enterdev Software

Try this:
turn the 2026 on, and hit manual then hit program-enter a frequency then
hit enter.
to select a particular channel to program, hit manual until it shows up or
hit the channel number then manual.
The full owners manual for the 2026 is on-line at the Tandy WWW site-get
it!.

For Sale:

I have the following for sale, both in mint condition with boxes, manuals
and standard accessories:

AOR8000 with modification for Scout reaction tuning - $450.00

Scout 40 Version 3.1 with RS rapid charger - $250.00

Will let both go for $685.00 including shipping CONUS.

Please e-mail if interested. Thanks.

Yes, Rep. Tauzin has revised the bill. But it is still a narrows what we can do with our scanners. Write or e-mail your Rep. to let them know that you don't like the bill (HR2369) and that you would like it if they would vote against it when it comes up for vote.

552. Uniden BC70XLT Pocket Scanner and converter

Newsgroup: rec.radio.scanner
Date: 1998-01-05 00:00:00 UTC
From: noobody@aol.com
Message-ID: <19980105020901.VAA13594@ladder02.news.aol.com>
Source record: 174859

The Uniden BC70XLT is a 20 channel pocket scanner
which receives 29-54, 136-174, 406-512 Mhz.
And when used with the Super Converter 9001(included)
it also receives 806-912 Mhz. (No gaps)
Features include:
Individual channel delay and Lock out
Keypad lock out switch
Panel Light
Priority channel
Search/Limit/Hold
Rechargeable pack included w/charger

The GRE Super Converter does just that.
It converts radio frequencies so you can receive 810 - 950 MHz
on a scanner that is not designed to receive those frequencies.
Some of the older scanners stopped reception at 512 MHz.
And some of the newer "BLOCK" 826 - 896 MHz.
You connect the Super Converter to your scanner, between the
antenna and the radio, program in or do a search (for an example)
limits of 470 through 496 and you will receive 870 - 896.
Oh my ..... that is the blocked out cellular band .....

Asking Price for the package is $ 135

The following Items are also for sale:

To see pictures and more detailed descriptions goto:

Actually, Jim, because I have a SUV and go into parking garages quite frequently, I use a Radio Shack cell look-alike CB antenna for my VHF-Low. I monitor the CHP all over the Sacramento Valley, and from Sacramento International I can hear the dispatchers from Chico to Stockton... Hope that helped ya...

Well, sure it does. I know a guy who prefers Packards.
Not the Hewlitt type; rather the 4-wheeled kind that
stopped production in the mid-fifties. He thinks they're
the best car ever made.

Maybe they are .... for him.

As for Windows 95.....well, I was on the inside of it from
back in the early days of "Chicago", and I mean *early*.
So I have a perspective not held be many. But no matter,
because it really can lend itself to a wide range of users,
from green weenie to crusty expert.

The thing is.....an expert in MS-DOS first entering Win95
isn't going to be a Win95 expert right off. It will take
him a while, just like it takes the green weeny a while.

Ain't nobody can come into Win95 as a stranger and expect
to be proficient and masterful right off, though that is a
neat aspect because you don't need to be. If you can run
applications, then expertise in the operating system is kind
of moot.

IMHO, so long as an operating system lets you do what you
need to do, then all this hoopla and zealotry over the OS
is just weird. Like, who cares? Regardless if you want to
surf the Internet; write a novel; compile a database; crunch
some heavy numbers; or whip out some magnificent graphics,
it's the applications that do that; not the operating system.

So indeed, the "best man" may have won, depending on the user's satisfaction and contentment with whatever he/she has, whether it be CP/M, OS/2, OS/9, or some flavor of Windows......

Aside from a costlier antenna from Larsen or maybe
Antenna Specialists......perhaps the most bang for the
buck, and maybe the best, period, would be a CB antenna
cut down to size for 41.5 MHz.

This would be almost exactly 65% of the optimum length
for 27.000 MHz. As an example, if a K40 CB antenna is
optimized at 27.000 MHz to say 60-inches, then clip it
down to 39-inches to optimize for 41.5 MHz.

I presume you're talking mobile roof-mount antennas,
but the same principle applies to base antennas. Some
CB base antennas aren't readily modifiable, though, but
for base antennas, I'd be referring to 1/4-wave ground-
planes and/or half-wave dipoles.

>
> SAM
>

I am running Probe on a 386DX40 8MB and get 62 channels per second. (I have also tried it on a much faster CPU and had similar results) This shows that the CPU has no real effect on performance but rather the ability of the radio to keep up to the commands being sent to it. This is due to the settling time for the radio to lock on the frequency .... (very basic explanation)

I found that a little tweeking went a long way to upping the channels per second. (I went from 48 to 62 by playing with the settings in probe.)

Probe, if you want my opinion, is the best scanner control software for the Optoscan board.

Kevin Fisher

Source record: 174869

I posted a modification (a few weeks ago) to alter the function of the Pro 2006 dimmer switch. This allows it to have either a ON (bright) or OFF setting. This will prevent early burnout of the EL panel. I use an Optoscan interface board on my Pro 2006 and don't need to see the display anyway ... works great for this application.

That particular post by Hugh Duff was made from his *unauthorized*
account at Humber College. Duff has since disappeared from this
newsgroup. Maybe you should follow his lead John.

For Sale......I have aquired one more scanner people.........
A Cellular capable logic board for a PRO-2042(or can be installed in a 2035)
This logic board has the European version CPU installed that opens up the entire 800mhz range. No soldering required, a few screws, unplug a few wires and your done, you get a new frequency range.
This logic board can also be installed in a PRO-2035 and it will also upgrade your 2035 to a REAL 2042
ie....birdie lock-outs in the search mode,
in the ' Auto-Store ' mode it checks for duplicate frequencys before it enters them into a memory location, skips over 0000.000o freqs ect.
This is the real deal people....NOT an Ed Cox Special !!
$ 300.00 (trades are always concidered)
Please only intrested enthusiasts, no price whinners ....
reply to; scanist@acmenet.net
ALSO
RS Cellular Modified Pro-2035 (European logic board installed)
Data/Tone Squelch Mod Installed (Bill Cheeks revised Mod-44B) works perfect.
25-1300 Mhz
1000 channels
Very good condition.
I am posting this for a friend, all the electronics installed by yours truly.
He is asking $ 375.00

@cts.com
Organization: COMMtronics Engineering / World Scanner Report
Newsgroups: rec.radio.scanner,alt.radio.scanner

We are pleased to announce the beginning of the
8th publishing year of the WORLD SCANNER REPORT,
a monthly scanner hacking and modification newsletter.

The World Scanner Report was launched in January 1991,
and has been continuously publishing ever since. The
WSR is a take-off on the two Scanner Modification
Handbooks and the Ultimate Scanner (Cheek3) by
Bill Cheek. The WSR does not repeat material from
the books; but it does keep them updated; corrects
errors; and upgrades old material as well as blazes
new trails.

The primary focus of the World Scanner Report is on
scanner modifications and re-engineering, but it also
deals with many practical issues associated with scanners
and scanning.

For more detailed information on the WSR, the following
Web Sites are available:

http://204.210.10.52/bcheek/wsr.htm

http://ourworld.compuserve.com/homepages/bcheek/wsr.htm

A complete Table of Contents for the last seven years as
well as a comprehensive Keyword Index are available from
the above sites.

You can also FTP the information from:

ftp://204.210.10.52/pub/wsr_news/

Or send e-mail to: bcheek@san.rr.com

You can also request information on the World Scanner
Report from the postal address and phone number given
below in the signature box.

>
>Good Luck !

Thanks for the reply. Did these downloads have the capability of FLEX?
That is my main goal. I've seen others that just do GOLAY and POSCAG
and or various other encoding techniques, but simplicity was my other
goal. A friend of mine already owns the previous Message Tracker
Pro(no FLEX) and I agree, it works great. I want to roll my own
though, and was hoping to include FLEX, if it possible, from an
economical standpoint.

Thanks again.

Dan T.

576. Joyn Mackey's Career Advancement

Newsgroup: rec.radio.scanner
Date: 1998-01-05 00:00:00 UTC

@cts.com
Organization: COMMtronics Engineering / World Scanner Report
Newsgroups: rec.radio.scanner,alt.radio.scanner

We interrupt our regular programming for this
special Report picked up from the dock workers
down along the Portland, Oregon, waterfront:

Seems last year, our cherished and highly admired
John Mackey wanted to work around boats and water,
so he applied for a job with the fishing fleet.

Surprise - he immediately landed a position as an
Apprentice Baiter, putting anchovies on customers'
hooks and spreading chum on the water around the
fishing holes.

He wasn't bad at the work with the result about
a year later, Mackey was promoted to Journeyman Baiter.
Along with that came a pay raise from minimum wage
to six bucks an hour. Man, was he ever happier than
a cat in a sandbox.

He was so happy that it motivated him to learn all
there was to know about the arts and sciences of
baiting hooks and spreading chum. He got so good that
week, the fine feathered fellow was promoted again....

....from Journeyman Baiter to Master Baiter.

And now we return to our regular programming.

Actually it matters a lot. What you want for a receiver is good Radio
Frequency ground. It is the return path for the energy coming down the
antenna. A good RF ground is a very different creature than a DC
ground (and 60Hz AC is close enough to DC to fall into that category).

The path from the socket to the water pipe is long, and involves many
connections which may be slightly oxidized. In other words it may in
fact be a very high impedance path to ground at Radio frequencies.
This is not what you want.

Generally A good RF ground will use braided copper on as short a run
as practical to either a cold water pipe, or a copper plated 8 foot
steel stake hammered into the ground!! You want a big conduction area.

Thanks, Bob. But I'm not hearing anything on 33.400. Well, I hear "traces" of
a Burger King about 3/4 mile away, but nothing from the Taco Bell which is more
like 1/3 mile away. Unless they're using a VERY weak transmitter on the
customer side (?)

Am I the only one TrunkTracking in Utah?

I'm putting together talkgroup ID's and fleetmaps for several systems here in the Salt Lake area. I have yet to read one snippet of info from anyone in this area on this subject.

Maybe this will wake someone up! I have it on good authority the Salt Lake County Sheriff's Office will be going to the County's 20 channel Motorola Type II system sometime later this year. I have a good start on talkgroup ID's for this system and the Salt Lake Airport Authority if anyone is interested. I'm also working on the Salt Lake City and Utah State systems.

Anyone interested email me or give me a call.

Happy trunking,

Jon Van Allen

Message-ID: <34b08ef9.0@ihotnews.ihot.com>
Source record: 174889

Dan,

I have the original setup, that is the ar8000 (not the "B" version).
The mod to my radio is quite simple, just a couple of solder spots,
and a plug. Your radio should be turned on before the scout.

If none of this works (and your radio is still working), you may
want to have someone look at it. Try a local "club" or "hamfest".
There are always a few helpful people around.

Lots of luck!
ZClown.

Congress is about to return.

It is almost time to begin the phone calls, faxes, and letters to
our Congressmen to inform them of our stance on the House Bill that will
greatly damage our ability to use scanners.

Would someone plesae repost the page that contains the House Bill
info and the phone numbers of all members of Congress?

What did I tell you folks? The left in this country is out to remove
your rights as fast as possible. Freedoms, liberties and rights inhibit
BIG GOVERNMENT, so they must be removed. The left thinks that Communism
and Socialism will work in America, though they have failed, or are
failing everywhere else on earth.
Fight for your rights or you will lose them all! If you refuse to
vote, and or make phone calls to defend your liberties, you will have no
freedom in the not so distant future. Scanners are a threat to big
government. With them, you can listen to what your "officials" are
doing and they do not want the lowly citizen spying on them.

I have just invested in a MVT7000 but am having troubles with a few of the features as:-

a. I am a bit dull

b. The manual is translated badly in some points.

Can someone please give me an explaination of the following features:-

'SKIP FUNCTION'

'DELAY FUNCTION'

'NON-MODULATION PASS FUNCTION'

Any information about this would be hugely appreciated

Best regards

Jon

I'll take a shot.

>
>'SKIP FUNCTION'

During memory scan or frequency search, ignore activity on marked channels
or freqencies (to avoid false signals, noise, or channels you know are
active but don't want to hear right now).

>
>'DELAY FUNCTION'

Do not resume scan/search for a predetermined time after loss of signal
(squelch closes) so as to wait for a reply on the same frequency.

>'NON-MODULATION PASS FUNCTION'

Ignore frequencies which are found to have a carrier but no transmitted
signal (voice or data) - useful for ignoring birdies, etc.

Of course the government wants to enslave the people. You don't REALLY
think they want to take scanners away, or take guns away from prople
because of some nebulous "it's for the children" nonsense do you?

The U.S. Government knows it can't inslave an informed population or an
armed population, that's why they want to take those things away.
Better to turn out a nation of functional illiterates from the
laughable school systems, and reduce everybody to a minimal income so
Big Business and their Politician buddies can rule the people...
scanners and guns just might get in their way and must be taken from
the hands of the people.

Now it's even on their agenda to take away freedom of speech by
attacking those talk-show hosts who might dare to say something that
Big Business doesn't like.

The only people who think America is FREE are those who have never lived outside it's borders.

Are you saying that you want to be able to listen to yourself
while you transmit ?
If so, use an attenuator on the receiver (scanner).

If you want to be able to use the scanner to listen outside of the
144/440 bands when you are transmitting then you could use a notch
filter on the scanner and a bandpass filter on the transmitter.
Total attenuation should be more than -80 dB
Insertion loss of the filter should be less than 1 dB.
You can even use the same antenna for the transceiver and scanner.

I would like to know how you are computing that figure, since microwave ovens use pulse modulation. At what point are you measuring that "radiation", i.e., how close or how far from the oven. Is this figure for a new oven or one that has seen hard, commercial service. Are you using a DC average or a formula based on duty-cycle? For that matter, are you giving factual information or are you merely repeating something you read somewhere?

I just love people who give these sweeping "facts" without any technical basis.

616. FS: Radio Shack Pro-2035 1000 channel Scanner

Newsgroup: rec.radio.scanner
Date: 1998-01-05 00:00:00 UTC
From: len999@ibm.net
Message-ID: <34b2112c.15265618@news2.ibm.net>
Source record: 174923

For Sale: RS Pro-2035, 1000+ channel scanner.

Immaculate, clean, excellent electronically, Pro-2035 for sale.
Box, Manual, very sensitive scanner. Full featured scanner.
Over 1000 memories to save and divide different types of
channels into groups. For example, put Police in one group,
ambulance, etc in another. Also has excellent FM audio when
run through external speaker/amp system. Covers CB frequencies.
Amateur 2 meter frequencies. Wireless phone frequencies.
Bought in late summer of '96. Intermittent, low usage.

Optoelectronics has a card built specifically for this scanner you
install and allows computer controlled access...order data base
from various sources and input all frequencies into the computer
and allows visual recognition of what frequency you are listening
to and a brief description of the channel. Very neat system! This
of course, assumes you have a computer.

This is a good buy...I'm selling a short wave receiver and this
scanner to make a dent in the payment on an Icom I-8500 or
something like that, that covers the full frequency spectrum. This
will allow me to have just one receiver...and not so much clutter!

The Shortwave receiver is a Kenwood R-5000, very clean
with box and manual...posting on rec.radio.shortwave.

Scanner Cost: $229.00 COD, I pay shipping.
This scanner started at $499 or $399 when introduced.
E-mail me for any questions.

Leonard...

>Vince

For UHF/VHF frequencies, RG-8 is quite lossy. Even though RG-6
(similar to most 75-ohm cable TV coax I believe) isn't normally used
on radios when transmitting (impedance mismatch and dielectric
breakdown concerns I think), for receiving VHF/UHF it is MUCH better
than RG-8. It is smaller diameter, easier to snake, much lower loss
and can be purchased with quad-shielding for even lower loss and local
(through the coax shield) interference rejection at higher
frequencies.

I have a Radio Shack discone antenna in my attic (older model, no
vertical whip) connected to an Icom R7000 in the basement through
about 50 feet of QUAD-SHIELDED RG-6 and it works better (over the
entire frequency bandwidth of the receiver) than any other coax and/or
antenna combination I have tried... including a whip attached directly
to the back of the radio.

Because of the quad-shielding, the only signals I hear come from the
antenna, not household appliances leaking into the coax as it passes
by them through the walls on its way to the basement. This is quite
impressive when seen for yourself, and not something most people think
about when putting in coax. It DOES make a noticeable improvement.

The only thing different about using it is the fact that since is typically a solid center conductor for cable "F" connector use, the "F" connector is really the best to use with it. Then you buy an "F"-to-whatever adapter for connection to the radio.

People, let's get a grip on reality here.

Yes, pager decoding software falls into the realm of private communications and is illegal, or about to be after the idiots at BNN shoveled their crap into the public limelight.

But Weather Fax and Mode B FEC RTTY transmissions are not private! They are transmitted for the benefit of anyone who wants to receive them, indeed private boats and commercial ships rely on these broadcasts for weather forecasts and charts. Don't confuse these public services with private pager transmissions!

Jon

I know you can buy the cell-tracking software that is either just software
or software/harware combo for like ~$800 or so (I think?).

Follows a cell call, even with tower handoffs.

No, I've never seen it either, but I think I remember finding a place once
that sold it.

For $99, it's not too bad. I bought one on an impluse and while it isn't anything like my Scout, it sure has a cool James-Bond (as my friends all call it) functionality.

As per a recommendation on the newsgroup, I turned the screw on the back that would appear as a calibration screw. This increased the range quite a bit at the expense of a slight inaccuracy at distance.

Be sure to get the extra $8 antenna, as the unit is pretty deaf without it, you have to be right on top of a signal otherwise.

Cool for when you are at the races and want to wonder in the pits and snatch a frequency and not look too obvious.

I'm doing some experiments in recording MIR with some software I've written for my soundcard; in an attempt to combat doppler shift, I am recording by searching the range:

143.525.. 143.725 NFM in 10KHz steps, near-zero delay

...which (on occasion) works very well at tracking the signal as doppler shifts it up and down.

One interesting thing I find is that if the squelch is set *slightly* too high, the scanner locks onto MIR's carrier, but drops out almost instantly a voice comes on.

What I want to know is:

Does the voice modulation affect the strength of the carrier, thereby causing loss of squelch lock?

I would think this likely, given NFM, doppler, and a weak signal, but I am not sure that I am thinking about it correctly.

(from The Last Word 1/13/98)

THE MOST CORRUPT CONGRESSMAN IN AMERICA?

Who bribes Rep. Billy Tauzin to push disagreeable causes?
Tauzin switched from a Democrat to a Republican following the 1994 right-wing coup and has since emerged as a congressman who advances ideas that can only be explained by what seems to be a willingness to roll around in cess whenever powerful lobbyists tell him to.
The legislator insists the wretched Telecommunications Act of 1996 does not go far enough. How can this law be any worse than it is, considering that it completely wipes away the limits on radio and TV station ownership that powerful corporations used to be subject to? We don't know, but for some reason, Tauzin says the greed sector still has not been deregulated enough in this regard.
While Tauzin advances unrestrained monopolies by corporate ogres, he supports rigorous statism regarding what individuals may do. He wants federal legislation to prohibit individual ownership of police radio scanners. Such an unconstitutional law would serve only to promote the tyranny of a secret police-state.
Instead of trying to take away our scanner, Tauzin should be concerned about the unconstitutional traffic stops along I-10 in his home state of Louisiana. In some areas along this highway, deputies stop you for a minor traffic violation and then confiscate your car and personal belongings. The district judge and sheriff then split the seized property and take it home for themselves. Sounds like something from "Dukes Of Hazzard", doesn't it?
What does it do for Billy Tauzin to back the causes that he does? Is he being bribed by special interests? It is hard to explain his agenda without suspecting that he is thoroughly corrupt.

****
* This is the CAT-TALK Mailing list. *
****

PRESS RELEASE !

NOW ! Get Full Trunking Control Through Software.
Scancat now supports the Bearcat BC-895 !
You've been asking for it... and now you've got it

Computer Aided Technologies is proud to announce support for the newest
addition to our Scanner Lineup, The BEARCAT BC-895 TrunkTracker. This
unique desktop scanner from Uniden has 300 memories that can be
programmed
for either conventional or Trunking Channels. Scancat can control all
the
conventional operations of the BC-895 such as scanning, logging,
spectrum
analysis etc., plus permit you to selectively load the banks of the
radio with
all your favorite trunking frequencies. Of course Scancat can also read
the
radio's memory contents to files, including trunking information.

With Scancat's support of over 45 radios, from over 10 Manufacturers,
your
software dollars go a long way. No need to buy several programs, one for
each
radio you own. The chances are high that we already support all of your
existing
scanner and receiver equipment, and the best part is....all the
equipment is
supported in one program, no need to purchase separate "drivers".

Now, with the release of Version 7.20 Scancat fully supports all the
trunking
features in addition to conventional scanning. Just look what we've
added !

[ ] A completely seperate scanning module just for the BC895
TrunkTracker !
[ ] Auto logging (with duplicate check) of all group numbers as they
become
active, GREAT FEATURE!!
[ ] Automatically place 'standard descriptions' of trunking groups
into the
database.
[ ] Tag your favorite 'groups' and auto-program them to any bank.
[ ] Scancat's new S-Meter - really cool !
[ ] Scancat offers user selectable colors.
Choose any one of 12 colors (per record) for a 'group or
service'.
[ ] Use for instant visual identification of Police, Fire, Medical
etc.
[ ] Scancat has a hit counter AND time stamp.
[ ] Scancat offers 50 character description PLUS comments.
[ ] SCAN trunkgroups and change banks will trunking with the click
of
the mouse.
[ ] Sort on any field in ascending or descending order.
[ ] Export to Comma Delimited "SDF" files.
[ ] Unlike the Radio in "non computer" control, you can easily
change banks
with a simple click, even 'conventional scan' the loaded
memories from
the computer.

Buy our latest Scancat-Gold for Windows NOW! Start enjoying the full
capabilities
of Uniden's BC895 TrunkTracker !

In addition, we can supply the serial cable that is necessary to connect
the
BC-895
to a computer. Buy the Software and Cable as a package, and save even
more !

SCANCAT-GOLD for WINDOWS ''SE'' $159.95
SCANCAT-GOLD for WINDOWS $99.95

This thing goes back far before 1997. If you haven't been around, or
haven't done the research, you don't know all the facts.

>Mr. Cheek on the other hand, has written numerous books about scanners
>that have benefitted tens of thousands (including me). Through this
>group, Mr. Cheek also gives away, FOR FREE, advice and knowledge that,
>in any other forum, would cost the average Joe serious $$.

This is entirely irrelevant to the issue.

>2. Mr. Mackey makes numerous accusations against Mr. Cheek, none of
>which negate Cheek's obvious success and expertise. Whether you
>personally like Bill or not is irrelevant...the man knows what he is
>talking about and even those of us who dislike him cannot deny that.

Oh, but they can, and have, on many occasions.

[lots of one-sided rhetoric snipped]

>and EARNED the titles we hold. Conversely, Mr. Cheek's expertise is
>well-documented and needs no repetition from me. I have no alternative

An assertion without evidence is not very convincing. I've seen very
little evidence of Cheek's bona fides other than what he boasts about
himself. If you have such evidence, by all means share it with us.
Otherwise, your words are hollow shells with no validity whatsoever.

>Flame if you want...but in keeping with a personal policy, this is my
>first and only public statement on this issue.

Translation: You posted stuff you know you cannot defend, and so you
cover yourself by proclaiming that you won't respond to any rebuttals
or requests for clarification. This is known as the Hit And Run
Technique, and is a classic way to take a cheap shot.

>No biggie. Just my opinion.

Exactly. And worth what we paid for it.

> >
> >Gosh I love you guys

You need to find the discriminator chip for your scanner. Each one is
different. There is a list of them at
http://w5gb.nmsu.edu/kc5kto/mods/baseband.txt Look up your scanner and note
chip number and what pin to tap. It's not something a beginner should
tackle, but it's not rocket science either. If you are unsure of your
soldering skills, I'd note the chip and pin# and find a buddy who can do it
for you.

Remember, FM means FREQUENCY MODULATION-so if you are at the edge of the
pass-band, or the signal has very high deviation, then the signal may
indeed "drop out".
One thing you can do is to try a wider FM mode, if you have one available.

Hi.

I just found this newsgroup and was wondering if I could hookup with any users in the North Bay, Sturgeon Falls, Ont. area to swap frequencies etc. I have Haruteq books which are for the most part, excellent resources but have found other frequencies and I no there are many unpublished frequencies we could share. I use a PRO 46 with full 800 Mhz coverage. It also occurs to me that I may be in a purely technical newsgroup and if this question is not relevant here could someone point me to another group if it exists.

Any help here would be appreciated.
John

I used to buy/repair/sell BC200xlt scanners a while back. I created a user's manual for this scanner so I can print one out whenever I needed an extra. No, it isn't just scanned in from the actual manual. I know that there are quite a few ppl out there with this scanner that are in need of the manual, but haven't gotten around to shelling out the approx. $8 plus s/h. It happens to be in MS Pub95 format. If you don't have MS Pub, then find a friend that has it. Use Legal (8.5 x 14") paper. Print page one, turn the sheet over and print page two. Staple it in the middle and trim off the extra at the bottom. They are good looking manuals IMHO. You may go to the following link and download it:

http://homepage.netspaceonline.com/~wiggie/Images/bc200xlt.zip

Good luck with it!

One that would improve the programming of frequencies would be to add a PROgramit interface. Its not too expensive, takes a little time and saves some mileage on the digits (fingers).
For the interface plans/program: http://www.qsl.net/ka2pyj/

Is it possible to use the Scout to get the frequency of a cordless telephone call made by Agent Mulder on the X Files? This episode is on video tape, which probably won't make a difference. I fugure I'll play it back and put the scout close to the TV, but he stands about 10 feet away on screen. I want to hear the other side of the conversation.

Thanks.

Yes, it is possible. Video tape the scout. Then place a tv playing the
video tape of the scout next to the tv playing the video tape of the
X-Files. You will then be able to here Mulder's conversation on both tv's.

:>) (Just an attempt at a little humor. No offense is meant to anyone.)

I know that some ppl make some claims to how great a scanner is
especially if they are trying to sell it for some reason or another.
I recently saw some postings on Ebay of some certain individual that
was trying to sell two scanners.

This is his discription of the Pro-50 scanner:
Radio Shack PRO-50 20 Channel Direct Entry programmable hand-held
scanner. This is one of Radio Shack's top of the line portable
scanners. Comes with recharger and removeable antenna. High bidder
pays shipping.

WOW! With 20 channels, 30-512Mhz and a scan/search rate of 16
channels/sec., I don't even know why they bothered with putting
out the Pro-43, Pro-26, etc.

This is the description of the Pro-2021 scanner:
REALISTIC(Radio Shack)AM/FM Direct Entry Programmable Scanner. The
BEST scanner Radio Shack put out. Comes with a telescoping antenna
and remote speaker. Top bidder pays shipping.

And just think so many people have wasted their money on the
Pro-2004/5/6 and Pro-2035/2042 scanners. Bill Cheek even devoted
all that time and effort of writing books on the wrong scanners.
Ok, I just thought it was funny and thought I should bring it to
other's attention.

-> Subject: Scanner Programming Instructions ?
->
-> I have a Uniden Bearcat BC 200 XLT hand-held scanner. Since I purcha
-> this unit, years back, I have not been able to "really" program it at
-> all, using the "lousy" fold-up sheet instructions that came with it.
-> Does anyone publish or print-up booklets that can help me program
-> this unit ??

That's probably the EASIST scanner to program that has ever been
produced.

Turn on the scanner, and then press 'manual'. Press '1' and 'manual'.
Enter the frequency, and press the 'E' key (if a channel number pops
up, it means you alreqady have that freq programmed into the scanner
in another channel, release tthe E key then press it again to store
that freq in new position as well as the old place).

That's it. DO it on each channel you need to program.

I currently own a Bearcat 210XL scanner which is 12 years old, so I'm certainly in need of an updated scanner! I would appreciate any constructive comments on Radio Shack scanners, most importantly the PRO-2041. Our local RS is offering that model @ 179.95. It did sell for 299.95. Can I go wrong with this model? Should I stick with Bearcat/Uniden? Is "trunking" capability needed? I live in the Rochester New York area...is trunking being used here? Thanks for the help.

Check out my scanner page at the bottom, I have a plan for mmaking such
a device out of an OKI-900 type cell phone. Kind of tricky but does the
job. I got it off the net a few years ago and it works pretty good. Just
try finding an Oki phone.

671. Wintone - Problems with Registration/Service

Newsgroup: rec.radio.scanner
Date: 1998-01-06 00:00:00 UTC
From: rsmerker@steaksandwich.com
Message-ID: <884098933.391053318@dejanews.com>
Source record: 174678
Cross-posted to: rec.radio.scanner,alt.radio.scanner,alt.radio.scanner.uk,rec.radio.swap,rec.radio.equipment

There are obviously a couple of problems which need to
be addressed here, and I would be more than happy to do
so. First off, let me say that Wintone was not created
as a get rich quick scheme for me, nor was it meant to
rip anybody off, hence the meager registration fee. I
understand that I missed registrations, i guarantee you
that it was not intentional, nor is it acceptable. If
you have registered Wintone of ANY flavor, and have not
recieved your registration code - please email me, and if
we did indeed miss you (Cancelled check or Statement item
required of course) I would be happy to make arrangements
to return your fee, and get you a registration number.

I will be the first to admit that our response times have
been downright pathetic lately due to system problems and
lack of available time to respond to all the requests. It
is our goal to get everything back to normal, and make
sure Wintone and it's support is the best it can be. SSS
now has more dedicated people to handle both feature
requests and orders - to insure a fast turn around.

Wintone was created so that people would have a convienient
way to access information which was previously cumbersome
or impossible to obtain. There are a lot of exciting
things on the horizon, and I want to make sure you get a
chance to be part of it. And to those of you who are
happily using the product - we thank you for registering.

Please feel free to voice your complaints here on the
newsgroups, or email us at <support@steaksandwich.com>
and we will respond in that forum as soon as we can.
That way, you can be sure we are sincere about our
intentions.

Thanks,

Richard Smerker

673. HELP PCCARD RADIOS !!!!

Newsgroup: rec.radio.scanner
Date: 1998-01-06 00:00:00 UTC
From: fao@moore.uk.sun.com
Message-ID: <68tkc7$b67@flonk.uk.sun.com>
Source record: 174680

Note 3: PCCARDS are credit card size devices that plugg into a computer (usually notebooks and palmtops) PCMCIA interface.

NOTE 2: I am not refering to the PC cards that go into desktop machines. I know they have radio cards of that size. What I am refering to are mobile cards that are credit card in size (lenght x width).

Technology is moving so fast in all areas except in radio, as a computer buff I like things that come in small packages like palmtop computers (psion, 200LX wince hpc etc) and notebooks. And since this computers come with a PCCARD interface for modems, GPS, mobile Phone Data CArds, Data Loggers, I am yet to see a radio PCCARD. Neither do I believe that a radio circuit is a more complex circuit than say a computer, or MObile phone card. Even digital video camera cards are available.

Funny enough there are even TV CARDS that plugg into these computers, this enables one to watch favourite programs on the move.

So why do is radio technololgy lagging behind ? Why is it still a believe that the bigger the better.

Well if anyone knows a source of this PCCARD radios pls let the small gadget lovers know.

I have had scanners for the better part of the last 14 years however I never had an outdoor antenna. This past week I finally purchased an outdoor antenna for my home from Radio Shack. The one I purchased is about $35.00, has a 6 foot tall antenna and 3 radials about 6 feet each. I bought this because my primary interest was lo band. Being in Connecticut, the state police here are still in the dark ages and on 42mhz but I hear they are going to soup cans and kite string next month :-) Anyway, the past 4 days I have spent at my desk looking for frequencies in the same range you are looking to hear. This antenna works great. I am hearing troops and their cars, non-repeated, from all over the state and I am hearing lo band base stations well into Massachusetts which is 50 miles minimum to the state line from my house. Being a ham, I learned years ago that the antenna was the whole game. Spend the most you can, get it as high as you can and use the best possible cable for your receiver can only hear what you put into the antenna jack. The scanner here is a PRO-2005.

679. Beware of Communications Electronics

Newsgroup: rec.radio.scanner
Date: 1998-01-06 00:00:00 UTC
From: James & Lindie Thomas <thomas824@jps.net>
Message-ID: <01bd1acc$a673cf20$453ed9cd@default>
Source record: 174686

After using Communications Electronics for years, I finally got burned. Two weeks ago I called and ordered the new RELM MS 200 (because they had the best price at $229). The old guy who answers the phones told me that it was on special for $186.95 shipped, so of course after confirming that it was not the handheld he was talking about, I dropped a money order in the mail and waited for the arrival of my new scanner.

Today I called to check on the status of my order, and the old guy tells me that my letter and money order were sent back because I did not send enough money. I told him that I confirmed the amount with him and that he told me the unit was on sale. He denied this stating that I was confused and that the unit that was onsale was the handheld. I asked him why they didn't call me to send additional funds at which point he cut me off saying it was my mistake and goodbye.

Even though these guys have the best prices, I will never use them again.

Just figured I'd let those out there know what happened.

Michelle,
I'm only an electronics hobbyist, so I may ask stupid Questions. I'm at
a loss why the RF generated by a microwave oven would even be
"modulated". Could you explain further?, What information is being
carried by a modulated microwave oven?. I always understood RF signals
are modulated because of the fact that a pure continuous AC signal
cannot convey information. Thanks

Bill, when did you take asswipe out of your killfile? Were things getting too quiet for you? It was relatively serene around here for almost a year. Johnny boy would forget is Prozac now and then and try to act up, but you were pretty silent. It was nice.

What happened?

This is posible, but a more likely explanation lives in the
mathematics of FM. If you design an FM communications systems, you
generally pick a modulation index that puts all of the energy into the
sidebands and none into the carrier. It is entirely possible that when
the signal if modulated, a modulation index was chosen that has little
or no carrier energy.

Just joining the thread so I might not have all the info.

For a automotive roof top antenna I have had great results with a commercially made Lo-Band base loaded antenna.

For a residental roof I have found, believe it or not, that a ham 2 meter Hustler antenna works fine.

Hey , I know a few people selling off old analogue mobile phones for real cheap (well , much less than digital) and I for one don't know anything about cellular phones. Is there a FAQ about cellular scanning , if I can find out which phones can be converted into scanners then I'll see about getting my hands on one of those analogue sets for experimenting.

Cheers

Hey there!

I would have to answer no to your question of is it worth it, if your are going to pay $120 for a used scanner that you can buy at walmert brand new with a warranty for $149.

I bought a SC150 about 2 years ago, and have been very happy with it. I have used it a lot, and ok, even abused it a little. It is a very tough unit. There are others out there with more channels, or a faster scan speed, or options for upgrading/mods/ or computer controlls, but if you are just looking for a simple, basic scanning unit it is a good buy.

But if you are gonna buy used, dont pay over $100, ok?

Source record: 174704

- Check switches on the Optolinx.

1 - Up
2 - Down
3 - Up

- Check scanner baud rate and terminator (CR or CR/LF).

- Check serial port settings. The baud rate should be set the same as the
scanner.
Data Size = 8 Parity = None Stop Bits = 1

- Use a terminal program such as Hyperterm or ProComm to sent text commands
to
the scanner. You should be able to type "AT<enter>" and get a "0" or "1"
in response.

Hope this helps.

Alan,

If you want to listen to a trunked system, the TrunkTracker is the only way
to go.
In a busy city (such as Atlanta), it would be near impossible to follow any
conversions
no mater how fast as scanner scans. The only stumbling block would be that
if
Atlanta does not have a Motorola system the TrunkTracker will not follow it.

I live near the Canadian boarder and can recieve the Canadian equivilent of the US's EMWIN called Weathercopy. I Was wondering if someone from Canada can tell me if DataRadio is the only manf. of equpment to decode this. $695 seems a bit steep to just check out the system.

EMWIN you can recieve w/ $30 of parts if your near a landbased rebroadcaster. Is the weatherCopy protocol public or is it propritary to DataRadio.

I've done serveral searches on the web and only see DataRadio as a supplier.

Thanks

I have a pro 23 and wonder if the 800 mhz board from it would work
in a bc100xlt with the cpu mod done
the almost empty board in place is the same size as the pro 23 board
if anyone has the bc200's board number handy please post it and
I might give it a try.

I agree. If Winradio made an external version that could plug in to a laptop via the PCMCIA slot, I would pick it up in a second! I noticed that Bill Cheek seems to know a lot about them, hey Bill, do they have plans to make such a beastie?? Let us know...

>Shut up

Geesh, John you'll flame anybody for even posting. But then you still
don't get it. Maybe this will help.

What has transpired over the last eight months or so has been an object
lesson aimed specifically at you John, in the duality of reality that is

usenet. The duality I'm speaking of is very similar to the yin/yang of Taoism, hence my parallel usage in this forum. Several well meaning people have tried to explain all this to you in their own words. But yet, you have still failed to make the requisite leap of realization and understand what has transpired. Perhaps you need a more lucid and basic explaination.

Usenet is simultaneously reality and non-reality. It is real because real people are exchanging real communication every minute of every hour of every day. It is non-real because ultimately this is all just a bunch of electrons racing through copper and fiber and silicon, only to end up splashing upon the insides of our monitors. The randomized patterns of those splashes are just so many patterns of colored dots. Only the person viewing those splashes can assign any meaning to the myriad of displayed patterns.

You, and you alone, have attributed meaning to those dots and subsequently
reacted to those dots. You have been told that those dots are just another
non-reality and not to get worked up about what you read. Others have told you that I'm endlessly baiting you and pushing your buttons. Both are true. Everything that has passed, is just a transient pleasure or an annoyance depending on your point of view or phase of the moon. The tag line I've been using, "Do not adjust your mind, there is a fault in reality," follows the same precept and is consistent with the duality of usenet and Taoism.

I must say though, John, you've reacted quite admirably. Sometimes watching
your excursions through the digital non-reality have been quite amusing. Posting miles of obscenities, sending people email bombs disguised as large
movie files, even posting dreary tantrums and then claiming said messages
were forgeries. One of my colleagues described the image of a chihuahua foaming at the mouth contaminating the keyboard when shown your rantings.
Yes, John I've been pushing your buttons knowing you'd behave in exactly the manner you've done. You have let yourself get worked up over nothing.
But, your ego and immaturity wouldn't let you blow it off.

Face it John, you've been Fooled by a Unique Combination of Keenly Elucidated
Dissertations in the usage of non-reality. And, you never even got kissed
first.

Thank you for your comments James. Communications Electronics has the RELM
MS200
scanner advertised at $219.95 plus $17.00 shipping in the continental US to a
street address.
We do not have this item listed at $229 as you have indicated.

I checked on your order which was received by our order entry department,
Sunday January 4th.
Because the check sent was $50.00 short, your order was not accepted and
therefore returned
also on January 4th. Your $186.95 check was enclosed with our letter.

Order entry did notice the amount sent in would have been correct for the
handheld RELM HS200
scanner which is advertised at $224.95 less $55.00 coupon plus $17.00 shipping
in the continental
United States to a street address.

If our staff at our Emergency Operations Center made a mistake in processing your order James, I
apologize. As an Emergency Operations Center, we are responsible for timely and emergency
dispatch of vital communications equipment to all our clients. We do not make a living rejecting
clients orders. When an order is received with insufficient funds however, to avoid any misunderstanding,
it is promptly returned to the customer.

Over the last 29 years, it has always been the goal of Communications Electronics to assist our customers.
Thank you, again for your comments. If I can be of service to you, please call me at 1-800-USA-SCAN.
We hope James, will continue to purchase the many fine RELM and Uniden products we distribute
in North America through any of our dealers or directly from us.

Ken Ascher WB8LIT

RE: BC895 The "epoxy blob" covers the bandpass(filter) switching transistors. The PC traces for these can also be gotten to underneath however,,,. Merely find the one that switches ON the 800 front-end and switch OFF the 200-400 one, and set search limits from approx 360 - 385MHz, in 5K steps. Oh yeah, they did make it a bit extra difficult(aka BC8500) by withholding the availability of a user settable mode selector.. No sweat, just swap the logic lines that control AM and NFM modes(Just like on the BC8500).

I was wondering if someone could give me an idea of approximately how far away I can expect to hear airport/airbase frequencies listed as GCA or "radar"? Primarily I'm assuming a good antenna for a hand-held, however, I'd be interested in knowing for a roof-mounted antenna as well.

Thanks in advance.

They just were dispatching and tracking calls for service at each
individual station instead of the main comm ctr underneath city hall
until the problem could be fixed. The base stations, repeaters and
voting recievers were not affected by the 911 outage so they could use
the radio system like usual.

Not so much on the scanner topic, but for everything else, there is a new mail-order company: TechAmerica. They have a huge catalog and have been canvasing the country with it. Hopefully they will start to carry scanners. I have been burned too many times by RS. TechAmerica just sold me a 2 meter HT for $88. I also picked us two universal NiCad chargers for $7.99 ea. Check them out at www.techam.com.

Notes:

1) Dallas Co. RACES also uses the Dallas Co. REACT repeater on 442.075 MHz as a UHF link for spotters that can't contact 146.88 or who are being interfered with (unfortunately, this is a real problem)...

2) All of these frequencies are used primarily for training nets, secondary operations (after a disaster), and alert paging. With the exception of Irving who actually use their repeater for spotting on occasion, all of these organizations spot with Dallas Co. on 146.88 and backups.

3) Moody, TX to be exact...:-) This net covers the 13 counties around McClennan Co. (Waco), north to Hilsboro and south to Temple...It's incredible to hear and usually a big

mess...:-) It has no ARES or RACES affiliation, just
Skywarn...Not even that some time...:-)

Would nice if someone could provide any updates - particularly
the 400 mhz repeater frequencies for any of the nets listed
above.

Other RACES or ARES net information would also be appreciated.

Thanks to Sean Peoples for his updates on 94/10/23 and 95/04/18.

Thanks to Kbrews Storm Spotting Frequencies web page. 97/03/29

Here is Mackeys "Publication"....it was reported by him (a known liar). It was not written by him. He is merely mentioned in the article as the source.

John Mackey, KA0SSF, of PARG reports members were on the beach enjoying the annual PARG bonfire when KB7YZS heard someone "cursing and yelling at people" on the VHF police frequency, which he was monitoring at the time. After a few minutes of listening, members figured out that the person was up in a balcony and was with a mixed group. KB7YZS, KB7YZR, N7XMD, and AA7UP (who just happen to be most of the PARG Interference Committee) immediately activated direction-finding operations and tracked down the interference to a local motel. It only took them a few minutes to spot a group on a balcony, one of whom was using an H-T. After noting that the transmissions coincided with what they heard on the police frequency, PARG informed Seaside Police. A short time later, Mackey reports, Seaside Police "caught the person in the act."

Seaside Police subsequently charged Bobby Lee Aguero, KE6VNU, of Rocklin, California, with interfering with a police officer. As we've already reported in The ARRL Letter and in QST, Aguero, 19, already faces similar charges in California.

Mackey said this was the second consecutive year PARG got to provide a public service during the Seaside convention. Last year several PARG members apprehended a purse thief--after a brief foot pursuit--returned the purse to its rightful owner, and detained the suspect until police could arrive. PARG has a Web page at http://www.teleport.com/~mscott/dumb.shtml. The group's current president is Justin Bousquet, AB7NG.

I have decided to try and work my way up to an Icom R8500 so I have for sale two fine scanners.
1-AR8000 handheld with full cellular.
Excellent condition with Soft case, Box, Manual, AC adaptor, Scout Mod, accessories, and Computer interface cable.
$450.00

1-Radio Shack Pro2035 with a US version 2042 Logic board. Does everything a 2042 does. Radio also has Beep Mod done (on/off) and also has the Programmit interface installed. Radio can be downloaded with a 1000 frequencies in a matter of minutes with the proper software. Sharewear program can be downloaded off of the net, but I just ordered it so I could include it in the package as I will have no use for it once I sell the radio. Excellent condition with box,Programmit interface cable, and manual. I might have the stock antenna, but I doubt it.
$350.00

Terms are Us Postal Money order up front, or I can take Visa,MC,or discover through my frame shop. COD not preffered but I will consider it if you want to chip in for COD charge. Prices are firm, but you can save some $$$ and Buy both radios for $700.00
Thanks Bob

I have programmed interfaces for both the PRO-2035 w/opto and the R7000. The problem you are having sounds like an ICOM firmware "feature" :(The ICOM 8500 probably can not handle the frequency of volume change commands you are sending it at 19200. I assume that the volume moves in discrete steps, having never programmed CI-V for the R8500. If this is the case, try sending one discrete volume change, at 19200, and see what happens. If your 8500 does not lock up then you have to code your interface to take this timing into account. I like to use event programming when designing my intrefaces that way I can use the response, if one is given, to trigger the next action. This somewhat syncs the communication between the radio and the PC. The gist of all this event programming is that you will not get ahead of yourself and overdrive the CI-V interface.

Let me know if any of this helps

something I did wrong.

> Not the
> caliber one would expect from someone who held a Masters Degree.
> But, then you don't have a degree, so that's to be expected.

What do you have to support your statement that I have no degree?
(you have NOTHING)

> The
> ARRL had to extensively edit the piece into a more presentable and
> coherent form and included the information in the ARRL Letter.

Oh really!! How do you know this? Who told you? You are a LIAR!

> I used to be cynical about your
> lying, now it's just amusing. The only thing you've proven to
> anyone is that you are a LIAR.

Funny, I used to be cynical about you being a IDIOT, but now THAT
is amusing!!! I have played you like a finely tuned piano, you
have fallen HOOK, LINE, & SINKER!!!!!

> Your issues with Bill Cheek have nothing to do with me. Never has.
> Using those issues here is just an excuse to hide behind the fact
> that you don't have the degrees you claim and are afraid of being

They have everything to do with you since you declared yourself the
person to review credentials.

> Cheek has the degrees. Last year, that's right LAST YEAR, I was
> able to verify Cheeks academic credentials with absolutely zero
> difficulty. How about the United States Armed Forces Institute,
> Madison, WI; San Diego State University at San Diego, CA; and
> University of Colorado at Boulder, CO for starters.

Give me the years & I will verify them. If your really did
verify them as you say, you would have the years.

Actually I did attempt to verify two of Bill Cheek's credentials
he claimed to have.
1. Mensa Membership.
2. FCC 1st Class Radio-telephone license (commercial)

This is what I found:
1. He is (was) not a current member of Mensa.
2. Going back to 1974 (?? I may be off by a year or 2) the FCC had
NO RECORD of Bill Cheek having such a licnese. About 13 years ago
it became the General Radiotelephone License & they had no record of
him ever holding that either.

> The professional
> credentials exist also. You want the same standard of comparison
> used on you that is used on Cheek? OK, smegma breath, you've got
> your academic data on Cheek, now cough up the data on yourself.

COOL & THANKS!!! Once I can verify authenticy, I will reply.
Please give me the years of graduation for each school. If you
really did verify them then that should be no problem for you.

> The truth is that
> you are a LIAR and don't have the degrees you claim.

What FACT do you have to support this statement?

You are like Eric Oyen, a whinning little Bill Cheek ass-kissing
FOOL.

> Affair of 1997" and have come to the following conclusions:

By the statement above it becomes OBVIOUS that you are relatively
new to this NG & know NOTHING about the history HERE.

> 1. John has no life on this newsgroup outside of taking potshots at Bill
> Cheek. I have been a regular here for six months and have NEVER
> personally seen John make an effort to reply to legitimate questions
> posed by newbies or others, or further the scanning hobby in any way.

Then you have NOT been paying attention. I have be in discussions
regarding the signalling of pagers, coax types, PL (CTCSS) tones,
& many others.

If you are going to make such statements, try being accurate.
(Of course, then you would not make such statements)

> Mr. Cheek on the other hand, has written numerous books about scanners
> that have benefitted tens of thousands (including me). Through this
> group, Mr. Cheek also gives away, FOR FREE, advice and knowledge that,
> in any other forum, would cost the average Joe serious $$.

Yea right. He also says that a TV antenna will have gain on 30 MHz for
a scanner & recommends using a metallic schrewdriver to adjust
an RF oscillator coil. Then he runs around & spams people & calls them
names & makes up silly stories about them on this NG. Yea, that is
really a good thing.

> 2. Mr. Mackey makes numerous accusations against Mr. Cheek, none of
> which negate Cheek's obvious success and expertise. Whether you

If you can not see how it negates then you are a fool.

> personally like Bill or not is irrelevant...the man knows what he is
> talking about and even those of us who dislike him cannot deny that.

And this statement confirms you are a fool.

How much is Bill Cheek paying you to do all this?

> 4. Just for the hellofit, I went to the ARRL web page and entered "John
> Mackey" as a search phrase, figuring that if he was what he claimed,
> there woud be SOMETHING there. There were ZERO matches. Nothing even

Then you didn't do something right because others have stated they read my name on the ARRL web page. My name can be found in *MANY* places on the ARRL web site.

Am trying to find old post called " S-meters for many scanners".
I put in my "favorite places" and now it comes up as unavailable, does anyone have a copy of it? I am trying to add an S-meter to my BC9000xlt.
Any help will be appreciated.

Thanks, Dennis

751. Was the Pro-2035 ever THIS MUCH!

From: Wiggie
Message-ID: <68soi8$4mp@sdrn.zippo.com>
Source record: 174808
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I found another great description and price on a scanner FS on Ebay. Whoever buys this scanner at this price...please e-mail me...I have some other great bargins.

This is the description in the ad:
1000 channel home scanner almost new. Has an ext antenna and lots of features like hyperscan,weather channels,rotary tuner,squelch, backlit display,and two power options 120vac or 12vdc.can recive bands from 25 MHz to 1300 MHz it covers them all.buyer pays 10$ for shipping

OK...I can deal with that...not too bad, but then he adds another comment later:

On 01/05/98 at 23:05:19 PDT, seller added the following information:
this is a Radio Shack PRO2035 made before the lesser one that thay have now

Is he commenting on the Pro-2042? Isn't the Pro-2042 essentially a Pro-2035 after they worked all the bugs out of it? I know that since he didn't refer to any particular scanner, that he could be talking about a Pro-2045 or 2041, but the STARTING PRICE that he is asking is $650!!!!! Is that with the OS535 and PROgramit interfaces installed? Does it come with Probe, ScanCat, ScanStar AND RadioManager?

Newbies....please understand what you are buying and the price range that it should be close to. This scanner never sold NEW for this figure ....go figure!

Wiggie

The modulation, being FM, is slightly over deviating as far as
your scanner is concerned. Thus is loses the carrier as it goes
outsede the passband.

The Winradio 1000i does not have such limitation - you can scan up to
1000 channels. It is also extremely fast at 50 channels/sec. I belive
the Icom unit is only 10cps.

Hope this helps.
Martin.

I purchased a hand held scanner two weeks ago. I am new to this. I brought a Radio Shack Pro-64 on
sale for $199.99 which I felt was a good deal. It appears to be an excellent scanner. This unit did not
have "trunk tracking". I live in Atlanta, Georgia and have managed to find most of the areas trunked
frequencies either through the internet or through Monitoring Times magazine. The Pro-64 comes
with "hyperscan" which allows it to scane 25 channels per second. My question is, is hyperscan
suffient for trunk tracking or should I consider returning it for a Pro-90 or another unit that has trunk
tracking built in. Any response would be greatly appreciated.

I have both, the 50's wide band FM mode is pretty
useless, not quite wide enough for FM broadcast.
RX audio is great, receives good too. For the price,
and features, I would recommend it.

VX-1 is nice for it's size, pwr out (1/2 watt on batt)....
but it has it's quirks too,
but for what it is it works pretty good. The firmware
is quirky as far as memories (banks for different bandsplits)
and how they advertise 290 channels, really only about
56 or so if you want individual PL/DCS/ offset etc.
the other "grp" will allow over 100 channels, but is
limited on PL selection...

Get a newsgroup browser and search both radios,
That may help you some more..

>Thanks for all the help!

I have both Icom PCR-1000 and Winradio WR-1000i and both are good.
The Icom is good for portable applications. But it is a hassle to use with a desktop PC - most likely you will need an extra serial card anyway if you use one port for the mouse and the other for the modem.

Also, the Visitune and Spectroscope feature of Winradio is fantastic. Winradio also scans much faster than Icom.

Icom has more software "personalities", Winradio software has more useful scanning and display features.

Hope this helps,
Martin

From: John McDermon <jnm@ibm.net>
Message-ID: <34b3c013.0@news1.ibm.net>
Source record: 174627

I received my PCR-1000 last night and got about an hour in the cockpit to testfly it some. Receives much better than I had expected. Even found myself tuning to a local FM broadcast station and letting it play in the background while I did some other work.

Have got a bit to learn about managing the scan banks, and memory channels, but I am quite pleased with how it works. Might even do the mod that has been published. But that should wait until it is burned in a bit...

Ham Radio Outlet had a good price on it, and delivery was 2 working days. Not bad at all! I might even order some more stuff from those guys.

Am very interested in keeping up with current and future 3rd party software offerings that support this Icom radio... Anyone know what is coming?

John

Awww last week. Mackey and Peter Breath Boe got in cahoots
over something I posted to a Microsoft newsgroup and construed
it into a belief that I play on AOL.

So I took 'em off my Shit List to dispel that nonsense. And
then realized that Mackey had missed me a lot. So I figgered
to hose 'im a little and then slap 'im back on muy Shit List
when things got boring.

> Were things getting too quiet for you?

Nah....but his and Boe's bullshit about AOL deserved a
confrontation.....

> It was relatively serene around here for almost a year. Johnny
> boy would forget is Prozac now and then and try to act up, but
> you were pretty silent. It was nice.
>
> What happened?

I come and go as suits me. Hard to explain. If you don't
like me being around, just hold your breath and pray a
little. My routine will alter again in short order. Mackey's
routine is the one that always stays the same.

Don't hold your breath on that nincompoop.

:-)

No.

Scanners made/imported after March 1994 are not permitted
to be cellular-capable, even by modification.

HOW TO SCAN THE 800MHz BAND ON ANY SCANNER!!!!!!!!

You can make your scanner tune the 800 mHz band by simply taking
an
old, but working UHF TV tuner. Attach a 9 volt dc battery to the
unit,
feed the output into the scanner antenna input jack and scan from
about
43 mHz to 46 mHz. An antenna about 1 to 2 inches long on the 300
ohm
plugs works fine locally. The tuner needs to be set on channel 83.
Have fun!!! Happy scanning! Enjoy!!!

Why the hell would Johnny hang around in a MS newsgroup? Does he claim to know as much about software and computers as he does about scanning and electronics?

Gold help the folks at Microsoft! They've got a new challenge trying to make software 'Mackey proof'.

Mackey working on a software help desk trying to help Joe Blow:

JM: "Sir, I'll help you with that program. It's easy."

JB: "Great. I've been having trouble opening a file in Word."

JM: "Ok. First, do you see the icon for Word?"

JB: "Yes."

JM: "Ok. Open the window."

JB: "Ok. I did that. Now what?"

JM: "Well, did the room get any cooler?" ......

I understand that ScanCat has released the new version of MAGIC! that
will import other file types (text, etc.) and export files for the
PCR-1000...you might look at :

www.scancat.com

for more info....I don't have any further info except to tell you that I
repeatedly hear that Icom will not support these 3rd party companies in
their efforts to make sw for you and me. They have to reverse engineer
the commands, etc.

Good luck.

Andy writes:

I am under the impression that the maggies in a microwave oven
are driven by half-wave rectified 60 hz, transformed up to a
multi-KV value. That would make them "sort of " pulse
modulated, turning them on and off with a half sine wave
--- on for 8 ms and off for 8ms. Also the half sine B+
would creat amplitude and freq/phase modulation as well,
all at the same time.

Which doesn't affect the intended purpose -- cooking.

I've never seen a regulated HV power supply in a microwave
oven, just a step up transformer and a half wave rectifier.

Source record: 174653

Thanks for bringing this to the newsgroup Ken, but regardless of what you have stated, your people made the mistake and I was the one left out in the cold because of it. I thought the amount your salesperson gave me was low which was why I confirmed with him that the scanner I was buying was the MS200 and not the HS200. I also enclosed my phone number in case there was a problem with my order (which I stated in the letter I sent with the money order) and no one called. I'd have been happy to send the additional money if someone had bothered to call.

Regardless, the end result is that because of your mistake I was inconvenienced, I had to buy the scanner elsewhere for more money, and I am still awaiting the arrival of my money order that I originally sent, which I have to return to the post office before my funds are available to me.

Most companies will err on the side of their customers when their employees make a mistake-it is nice to know where your priorities are concerning your customers.

If you have any further comments toward me, take them to e-mail.

How can radioraft be able to decode ALL kind of RTTY-signals ? Both
centerfrequency-baud and shift are unequal to each-other.

While I think its a good radio, I have several problems with it.

1. As you have mentioned: slow scanning speed.

2. Not nearly as easy to to use as my RS, Uniden, AOR scanners even
my
ICOM R8500. I my opinion, programming the memory channels is not
very
well thought out at all. Using the R10 is a kluge of button presses
along with
the function button.

3. Has a computer interface, but as far as I've found, there is no
way to
download memory from a computer. It only allows you to control it.
Why do
that on a PORTABLE scanner? This one I could not believe!

4. Banks cannot be linked.

5. Alpha tags are almost useless. You rarely get to see them because
of the signal
meter.

ICOM should get it's act together and create a useable interface. You
should not have to
jump through hoops to use a scanner.

Source record: 174657

Yes! It is a very acceptable cost/performance tradeoff, as long as you don't want to go over 75ft or so. Just be sure to use RG-6 instead of RG-75. Scanners' receivers are 50ohm characteristic impedence. RG-6 is 75. Receivers aren't that picky.

loser wrote in message ...
>A good ground is a good ground no matter what the frequency.

Arrrrrrrgggggggggg!!!

There is no perfect "ground." And what exactly is "ground" anyway?
It's just a defined reference point, a node, and as such it has complex
(in the EE/mathematical sense) impedances to anything you might
choose to call "ground." Is an array of 1000 ground rods in your
back yard a different ground than 1000 ground rods a few blocks away?
You bet!

It is better to think of grounds in terms of what you are expecting from
them. A few general purposes are: Safety, Lightning protection,
radio reference, and signal common.

All AC operated equipment should ideally be safety grounded if there
is the possibility of the "chassis" becomming "hot." That's what the
third prong is for. BTW, it's a safety redundancy issue that the AC
mains in this country have one side commoned to earth ground, and
called neutral. Redundant in the sense that both line leads are
tied together and high voltage is applied from this node to the chassis
for the HiPot manufacturing test. If there is no equipment fault, it
doesn't matter if these two leads are swapped (sorta simplified version).
But... the green third lead MUST only be for safety ground...

For noise issues, think of the effect that noise CURRENTS will have on
the various impedances between all the grounds in your setup. Connecting
a computer ground to a radio ground might introduce noise currents, and
hence, noise voltages, where previously there were none. Personally, I
prefer transformer isolation of signals.

Gotta go now, but I'll discuss this further if there is an interest...

It is a simple downconverter that moves the 800 to about 808 Mhz down to 45 to 50 Mhz so it's within the range of any scanner. As I said this is ok for stronger "local" signals. You could add a 9 VDC power supply and an amplifier, but an outside antenna would be cheaper. An old UHF tuner and 9 volt power supply or battery won't break the bank in most cases.

Actually the RG-6 will be better, because the RG-8 would be MORE loss for scanner then the rg-6. I don't know how it really works, but I looked it up. I like RG-8 for all my ham gear, but i use rg-6 for all my scanner needs..

OK, then give a number for the license. But it is really not of
much because your license would have expired 15 (or more) years
ago. Your license is no longer valid & has not been for
over a decade. Those licenes have been
converted to something else a long time ago which you
obviously missed out on.

BTW - While I know I could make some money here, I
never make money bets or by lottery tickets.

With the UHF tuner you will have continuous coverage from 470 Mhz to 890 Mhz. The scanner stays 43 to 45 Mhz and you just change tuner channels.

CH
14 470-476
15 476-482

all the way to

82 878-884
83 884-890

Get a list of the freq's for UHF TV and pick the channel that covers the frequency you want on your scanner.

PS: put tin foil around your Leyden jar and point it north. That worked for me.

Hi to every lucky fellows who own a Yupiteru !!
... and to others too :)

The skip and delay functions applies whenever you are scanning or searching.

The skip function does the following: when the scanner locks on a frequency, instead of waiting the signal to vanish to resume scanning/searching, the scanner resume after 2 second even if there is a modulation.

The delay function acts when the signal disapears: instead of waiting 2 sec before resuming scanning, it waits 4 sec. This allows you to hear a new modulation which may come, without waiting to scanner to do a full search/scan round trip.

As for what you call 'non modulation pass function', i think i've read in my manual 'search pass frequency'. There are some slots (i don't know how many are of them on the 7000, i own a 7100) in which you can memorize frequency which you don't want to be scanned during a search/scan job. This allows the scanner to scan without locking on this frequencies. Typical use of this feature is for avoiding lock on station blocking frequencies.

Hope i've been clear enough, for english is not my native language ;)

bye bye everyone !

819. EDACS decoding tips & help

Newsgroup: rec.radio.scanner
Date: 1998-01-07 00:00:00 UTC
From: Jason Reilly <jreilly@tassie.net.au>
Message-ID: <34B3B9CD.4F48@tassie.net.au>
Source record: 174726

Hi ho all,
A fairly large EDACS network is being established here in Tasmania (Australia) and will see the Police and many govt agencies move to it, along with private and commercial users. Hence my enthusiasm to scan it. I have a few tips for AOR 5000 owners: program in all the channels you can hear that belong to the system, select no delay, and put in a audio-tone reject value of about 252-255 (depends on your AR 5000 and the network). Lock out the control channel(s) and scan away. due to the no delay and tone reject, you will not hear (well only for a microsecond, while the AOR decides if the tone is one to reject) the annoying tail pips. This will only work if the 4 second rolling blast of data is not activated. Something more sophisticated is required:
Look at URL: http://web2.airmail.net/lblant1/trunked.htm
for a copy of edacs.exe and the C source code and explanation text.
Given suitable modification to the code and re-compiling, one could construct a EDACS trunk-tracking program for computer control scanners. Since my knowledge of C is zip, I hope someone will take up the challenge. (I gave up my low level programming skills when the 6502 went out of fashion) I have found, however, that the edacs.exe program as it is, is slow, that is it lags (by 4 seconds in my case) reporting activity on the control channel. It even misses brief calls alltogether. Bear in mind that I'm using a 386-25 to do this, a 486 is faster. I imagine that a Pentium would be close to 'real-time'. I've not explored the effect of a faster UART serial port, allthough at 9600 it shouldn't make any difference.
Question time: does anyone have any more knowledge on the EDACS system apart from what has alrady appeared here and in the web site mentioned above? And what about AEGIS? All I know is that is is based on the integrated data format of EDACS (9.6k), and comes in two levels of encryption: simple and secure.
Ta - Jason

I own several scanners, including a PRO-2005, PRO-43, BC-200XLT, PRO-2026, AR8000 and BC760XLT. I recently purchased a PRO-2041 and think it is an excellent buy for the money - and I paid $199. You can buy better scanners, but not for $179! It has advanced features like auto store and sorting and can be uploaded from a computer using a simple cable and software. Add to that 400 channels and triple conversion to keep images out and you definitely have a winnner! Go for it!

Good grief, don't tell people that! RG-58 is just about
the worst cable that can be used for above 20 MHz. It's
okay for MF, LF, and VLF, but not for HF and up.

==========
PRELIMINARY NOTE: This article is self-contained and you really don't
need any other supporting materials other than the service manual for
your scanner. Bear in mind, however, that only so much detail can be
in an ASCII text file like this. If you want more detail than offered
here, a hard-copy laser printed version of this article, complete with
professionally rendered graphics is available for US$5.00, ppd. See my
signature box at the end of this article for addresses, phone numbers,
etc.
==========

What is an "S-Meter"? Well, it stands for "signal meter" and is used to
provide an "RSL" (received signal level) indication of the strength of
the incoming signal. S-Meters are all calibrated pretty much in the
same fashion with two scales. The first 2/3 of the metering range is
calibrated in "S-units", a fairly linear scale of 0-9. The units are
read as S1, S5, S9, etc. S9 is the calibration point, generally
meaning a signal at that strength is 100-microvolts, but manufacturers
sometimes use 25-uV or 50-uV as the reference for S9 signals.

The relative signal difference between S-units is typically 6 dB per
S-unit, between S0 and S9, but in practice this can vary widely, from
as little as 3 dB per S-unit to 7 or 8 dB per S-unit. Unless you know
different, it's okay to figure 6 dB of RF change between S-units 0-9.

The last 1/3 of the scale is calibrated in decibels (dB) over S9 and is, of course, a logarithmic scale, typically in three 10 dB sections though some meters go to 60 dB over S9.

Up to this point, you may think that S-Meters are useful only for measuring the relative strength of incoming signals, but think about it for a minute. What determines the strength of signals going into your receiver? More specifically, what factors are under YOUR control that determine received signal levels? I can think of at least four things right off: antenna type; antenna height; coaxial cable quality and length; and the correctness or precision of the receiver's electronic alignment (internal adjustments).

Therefore, there are a number of things you can do around your monitoring post that will affect the strength of received signals. Wouldn't it be nice to know if something you did had a beneficial or harmful effect? Sure! That's one powerful use for an S-Meter.

As an example, say you want to change out your coax cable and want to be sure the new stuff is better than the old. So first tune to a known consistent signal such as a NOAA weather station or perhaps an 800 MHz control data signal. Write down the S-meter reading. Then change out the coax (or elevate the antenna, etc). Then write down the new S-meter reading and compare the two. You'll know if you did right or wrong.

Many scanners are capable of supporting an easy to build and install S-Meter! Most Realistic scanners made by GRE-Japan with the civilian aero band, 108-136 MHz, can support this low cost, high performance S-Meter modification.

It takes special circuitry for a scanner to receive Amplitude Modulated (AM) signals because AM is an uncommon mode in the VHF/UHF spectrum. In fact, AM is used pretty much exclusively for civilian aircraft comms on 108-136 MHz and military aero comms on 225-400 MHz. Most scanner signals are Narrow FM (NFM). Wide FM (WFM) is used in the FM Broadcast band, 88-108 MHz, TV audio signals; and studio-transmitter-links. Everything else is pretty much NFM.

Therefore, most scanners are designed strictly with NFM in mind, and will not have either AM or WFM capability except as a costlier extra feature. That's why you pay more for scanners that have the civilian aero band, and more still for those with the military aero band.

If your Realistic scanner has the AM mode, and it will, if it has the civilian aero band, then chances are good that we can take advantage of its extra circuitry to add the simple, low cost S-metering function.

Scanners known or strongly thought to be capable of this easy S-Meter mod include the following listed in Table 1:

TABLE 1: COMPATIBLE SCANNERS FOR THIS S-METER MOD

PRO-2042 PRO-2027 PRO-39
PRO-2035 PRO-2024 PRO-37
PRO-2032 PRO-2022 PRO-36
PRO-2006 PRO-2021 PRO-34
PRO-2005 PRO-2020 PRO-32
PRO-2004 PRO-62
PRO-2003 PRO-44
PRO-2002 PRO-43

CAVEAT: Many of Radio Shack's later scanners are made by Uniden, the design of which leaves so much to be desired that this version of the S-Meter is probably not feasible. There may be other alternatives but are beyond the scope of this document.

If your scanner is not listed in Table 1, the best way to determine applicability of this procedure to your scanner is to review the main schematic diagram for your receiver section, and compare it to the circuit of IC-2, Q-12, Q-13, and D-33 of the PRO-2006. This circuit is used in all the above compatible scanners, and is required for this version of my S-Meter mod. Specifically, you will look for the NFM chip and AM detector diode shown in Table 2 further below.

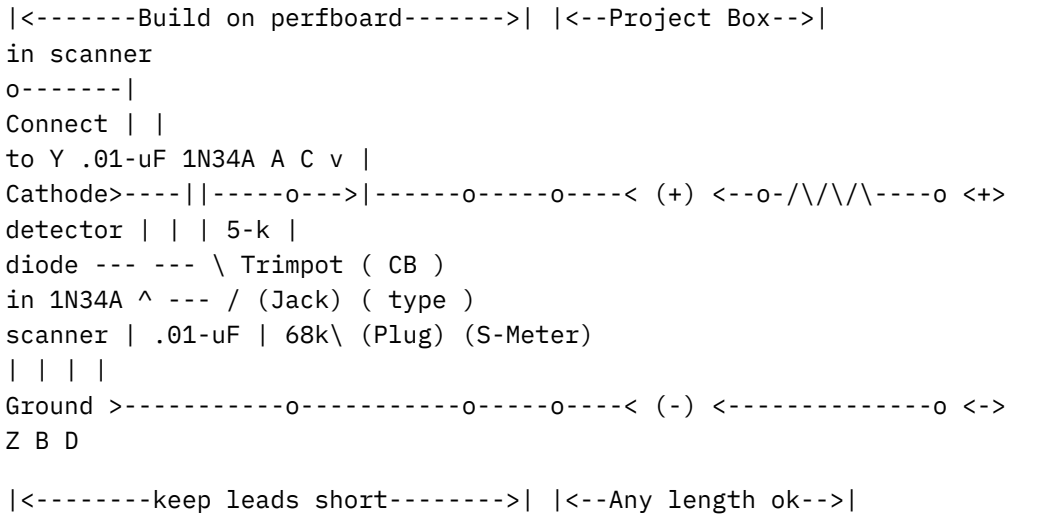
The AM section of the PRO-2006 is almost identical to the AM circuits for the scanners listed in Table 1. Each of these scanners takes its AM signal from the output of the 455 kHz IF filter that's attached to the NFM Discriminator chip. Part of the IF signal goes back into the NFM chip for NFM signals as needed. The other leg of this "Y" is that part of the signal that goes on to a separate AM processor. The key thing here is that both circuits are used full time. Special switch circuits do the controlling of which mode is actually in use, but the circuits are still on full-time. That's why we are able to use the AM circuit to power our S-Meter

The key point here is that you must identify and use the cathode of the AM Detector Diode as the pick off point for your S-Meter signal. If your scanner is capable of this mod, it will have an AM circuit almost identical to that of the PRO-2006. Find it, and then locate the AM detector diode. The diode's banded end is the cathode where the S-Meter signal will be tapped.

For base scanners, build the simple circuit in Fig-1 on a bit of perfboard. For handheld scanners where space is at a premium, it may be best to not use a board, and just build the circuit of Fig-1 directly into the scanner, part by part. Start by soldering C1 to the cathode of the AM detector diode, and the anode of D1 to a handy ground. Then build the rest of the circuit around those two components. Following is Fig-1, the schematic of the S-Meter circuit.

Build the following simple circuit left of Points A and B on a piece of perfboard. The circuit to the right of A and B is optional, explained further below.

FIGURE 1: SCHEMATIC DIAGRAMS



THE PARTS: Radio Shack stocks the parts shown in Fig-1 except for the S-Meter. Diodes must be germanium, 1N34A or 1N60. Capacitors should be ceramic disks. Resistor (56k-100k) and trim-pot (3k-10k) are not critical. The circuit of Fig-1 must be as shown. If you use an external CB-type S-meter, so much the better....just build the meter of choice into an attractive or functional project box with a cable of any length from the box to Points C and D which should be wired to a male phono plug of some sort.

Most any analog CB-type S-Meter is ideal for this project, but the larger the face, the more readable it will be. There are thousands of junked CB rigs all over the planet, and most any CB or radio shop will have a bin full of them. The cost of a salvaged S-Meter should be negligible.

The scanner should have a mating female jack connected to Points A & B, installed in an out-of-the-way place for the plug from the external meter.

Keep the Point Y lead length very short, not more than an inch.

Connect Point Z to scanner PCB or chassis ground and keep that lead short, not more than 1 inch.

Connect Point Y of the S-Meter circuit via a very short wire to the cathode of:

PRO-43: D-302 TK-10420 or 10427
PRO-39: D-202 MC-3361N
PRO-37: D-122 TK-10420
PRO-36: D-114 TK-10420
PRO-34: D-117 TK-10420
PRO-32: D-122 TK-10420

Other Scanners: This mod may work with other scanners that have the civilian aero band of 108-136 MHz. If your scanner has 108-136 MHz and is not listed above, then find the last 455 kHz IF section, and locate the AM detector. Connect Point Y to the cathode or IF-side of the AM detector diode.

==========
NOTE: While this mod probably won't work with Uniden scanners nor Radio Shack scanners made by Uniden, a little R&D and experimenting on a Uniden aero-band scanner could prove successful. I don't own any Uniden scanners, but can assist you in your R&D if and only if you and I both have a copy of the service manual for your scanner. Contact me by e-mail if interested.
==========

WRAP-UP DETAILS: Points A and B are the metering points where any DC voltmeter can be used. S-Meter signal range will be about 0-1v. The circuit of C and D is an optional CB type S-Meter, and should be used external to the scanner. Therefore, it is ideal to wire A and B (length not critical) to a phono jack on the rear panel of the scanner for easy connection of the external meter. Use 1/8" or RCA phone jacks for base scanners and 3/32" submini phone jacks for handhelds.

METER CALIBRATION: Any DC voltmeter can be used directly at A and B including a bargraph LED display. If an external S-meter circuit is desired, then wire it as shown. Use a walkie talkie or other transmitter to send a strong signal into the scanner, and adjust the trimpot so that the meter reads exactly full scale. All other signals will then read proportionally lower. Too cool for words!

METER LIGHTING: You can embellish your S-Meter with a small pilot lamp behind it to illuminate the face. Many CB meters have such a lamp built into the body of the meter. You may have to tap 12-volts or other power from the scanner for the lamp, or provide external power, like for handhelds.

SUPPORT: I do not supply S-meters. I can provide other parts including printed circuit boards, assembled or as a kit. I will provide technical support of this project on the public network forums and/or by e-mail; never by phone. See the beginning of this article if you need a hard copy version of this article.

MOD BOARD INSTALLATION HINTS: Most modification circuit boards really need no special effort in the mechanical installation. I used to use fancy standoffs, bushings, and machine screws, nuts, and bolts, but no more, considering all my mods!

Now I loop a stiff #18-ga copper wire (RS# 278-1217) through a pair of ground holes in my perfboard or printed circuit; solder it securely to the board; and then solder it to a ground on the main board.

I solder the #18-ga wire to a chassis sidewall, or in some cases, to a ground foil on the main receiver board. This mount is rigid, safe, and easy, not only to install, but also to remove if needed. A "glop" of hot-glue on the bottom of the mod board prevents accidental shorts below it.

Enjoy S-metering at its finest!

"Users" implies people. You are not a person.
You don't count.

> If you have forgotten, I could re-post some of
> those requests. Would you like me to do that?

If you got the hair and won't conjure them up on
your own, sure. Yes, I'd like to see WHO wants to
know my background besides you. And if they still
want to know, I'd like an opportunity to peer into
their background, too.

But yeah, you post "some" of "those requests".

And fish out your wallet whilst you're at it. Let's
sweeten this deal up a little.

Well, I have had one now for over 2 years, and I LOVE it! No there is no mods period that I know of. There are a few keypad tricks that you can do to play with. Ummm, to my knowledge it is one of the if not THE FASTEST scanning haldheld on the market. Yes there are many other excellent scanners out there some handheld and others mobile type (like PRO-200#) but, for the money the SC150 is a great scanner. It scans 100 channels per second!!! That by far blow away all other scanners I have seen. For example the AOR 8K is (I think) about 6-12 channels per sec! Hmmm, quite a difference.

just my 2 cents worth...

Does any scanner maker make a scanner that includes the entry of the sub-audable tone (some call it the private line code) CTCS that can be entered, one per channel to hear only one station on a multipule agency use frequency.

Like 3 police agencies with the same up/down links but using 3 repeaters each with their own activation tone. I only want to listen to agency 2 instead of the garbage from agencies 1 and 3.

Thanks

Hello Everyone,

Thanks to all of you have helped me out thus far! Still looking for the following:

Scanners: BC-15, BC-140, BC-150, BC-160, BC-200, BC-201, BC-211, BC-20/20, BC-300, BC-350, BC Alert, Jolly Roger and other Electra scanners.

Plus owner's and service manuals on the BCL, BCH, BCU, BC-2, BC-5, BC-6, BC-12 and on ALL the scanners listed above!

And, any other Electra scanners, parts, antennas, brochures, literature, etc.

Have some parts and manuals (owner's, service, SAMS) to trade or will purchase outright. Please reply via email and include condition, asking price, etc.

Thanks in advance,

Bill

I just got a new R-10...and what can I say?! I love it....

Picks up the SW broadcasts BETTER than my dx398/aka ATS-909 (Sangean)
and includes .5 - 1.3 Gigs!

I love it....but one thing I dont love is the SLOW memory search...

A slow 16 channels per second!

But you give a little, and get a lot.

I f you own one of these EXCELENT radios, please email me and let me know
what you think of it!

I will be adding R-10 links to my web page a www.n-link.com/~friendly

to include MODS!

Looking forward to hearing from you other R-10 owners!

I just got a BC200 xlt today (for $80 at a pawn shop!) and really like it a lot.. However, I am having a problem clearing out the search freq's... I set the upper and lower limit the first time and searched fine thru thos freq's fine. However, when I tried to enter a new lower/upper limit, it still searched the original freq limit. I know it's just the idiot factor on my part, but any help would be appreciated. I didn't see anything in the manual posted here, but then again, I am reading it as a straight text file (no MS Pub here...)

Thanks.

BC200 XLT mods... These are culled from old posts here in the newsgroup...

Speeding up the scan/search rates for the Uniden BC-200/205 XLT
You will need a small crystal or ceramic resonator in the 600-800
kHz range.

1. Disassemble the unit to access the microprocessor area.
a. Slide off the battery pack.
b. Remove the two screws from the rear of the scanner and the
two screws that hold the battery retaining spring at the
base. Then remove the spring.
c. Carefuly pry the bottom of the rear cover from the scanner
and remove the cover.
d. Locate the two small screws at the base of the circuit board
and remove them. Gently pull the front panel from the main
frame at the base and separate them. If you separate them
between the two layers. Remember that for later reassembly;
the pins will have to be lined up perfectly before you slip
the sections back together.

2. Search around the logic/CPU board (Uniden calls it the "MICOM
PCB Assembly"), and locate Y-201, which is a little rectangular
component. This is the stock 400 kHz resonator. Your
replacement can be a bit larger if necessary, but not grossly
so.

3. Carefully desolder and remove Y-201. Put it in safekeeping
because you may want it for something else someday.

4. Install (solder) your newly procured replacement clock
resonator, be it a crystal or another ceramic resonator, where
Y-201 came out.

5. Reassemble: Insert top of the front panel into the slot under
the volume/squelch control panel. Carefully noting the alignment
of the dual in-line connector at the bottom of the board with
the mating socket, press the front panel firmly into place. Be
sure that the holes at the bottom of the circuit board line up
two screws and tighten them

6. Replace the rear cover by inserting the top of the cover into
the slot under the VOLUME/SQUELCH control panel. Press cover
into place. Insert and tighten the screws.

7. Reposition the battery retaining spring (slotted side toward
notched hole). Insert the two remaining screws and gently

tighten them.

8. Slide the battery pack into place. Switch scanner on to ensure that the display comes on. If not, the battery may be discharged or the dual in-line connector may have been misaligned during reassembly (step 5). Another possibility would be that the new resonator either doesn't work, is unsuitable, or may have been incorrectly installed. Another possibility (if you installed something greater than 800 kHz is that it's just too fast.

Assuming that the display comes on, leave the antenna disconnected, and run a speed test. Speed in channels-per-second equals the number of channels divided by the time in seconds. Using a Murata-Erie 800 kHz

Note that the channels must have frequencies programmed into them. "Empty" or 0000.000 MHz channels run faster and throw off the calculation.

In addition to the shortened delay time, the user reports that the panel lamp will "time out". Doubling the clock frequency halves the "light on" time. There is a variable extended delay modification in the "World Scanner Report", to large to duplicate here. Also, in Volume 1, Number 4, Bill Cheek reports that the UC-1147 CPU has the necessary large chunk of memory on board, so you're stuck with 200 channels. You can get the WSR from:

COMMtronics Engineering
PO Box 262478
San Diego, CA 92196

The Scanner Modification Handbook I and II are available from the same address. They're something like $17.95 each + $3 P&H. The WSR is $25 per year.

NOTE : I am not responsible for anything that goes wrong. Note that this

Newsgroups: alt.radio.scanner

Here's some mods to help remedy the 200XLT's low battery indicator/blank out feature, courtesy of Bob Parnass:

BC200XLT LOW BATTERY FIXES
Troy T. Pummill, N6XMV

Here are two small articles from MT. I have not tried these mods, do so at your own risk (i.e. your milage may vary).

From Monitoring Times
Bob's Tip of the Month
May 1990, page 98

BC200XLT SHORT BATTERY LIFE SOLVED

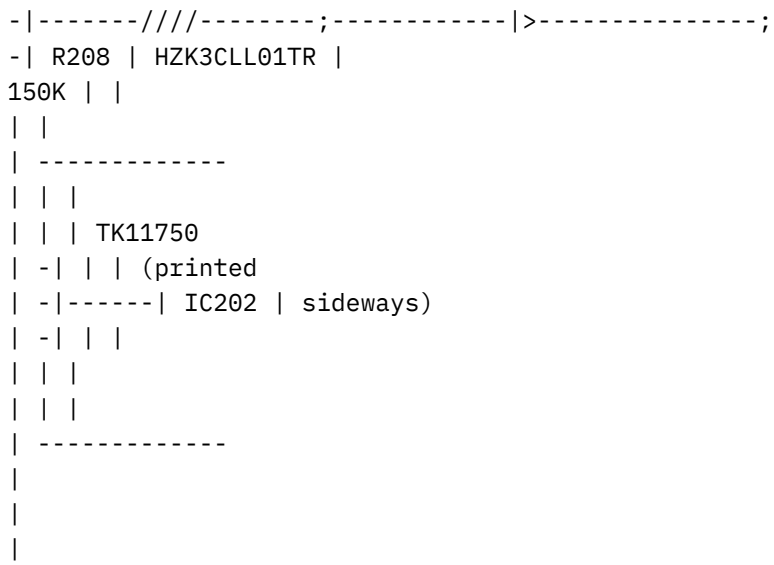
Short abttery life--sometime only an hour or two between charges--seems to be the only major complaint amoung owners of the laeading hand-held scanner, the Uniden Bearcat BC200XLT. Presumably, owners of similar sets like the BC100XLT BC205XLT, and Cobra 4030 could have the same problem. Now that is an ailment of the past.

It turns out that the batteries were not really at fault; a zener diode which determines the voltage at which the low-battery indicator would come on was defective in some units, causing the circuit to actuate prematurely. Replacing that idode and changing the value of an associated resistor provides the answer.

FREE FIX

MT contacted Uniden and was assured that they will provide the fix for free, even if the radio is outside of the one-year warranty period. If your Uniden BC200XLT suffers from short battery life, send the radioo along with a brief note describing the ailment, to Uniden Customer Service, 9900 West Point Drive, Indianapolis, Indiana, 46250.

As shown in the accompanying diagram, zener diode D203 and resistor R208 are the parts in question. D203 should be about 7 volts and R208 should be 150,000 ohms. These are miniature surface-mount devices on double- sided circuit board; if your radio is under warranty, attemping this fix yourself will void that warranty.



SHORT CUT

Mark Machcinski of Wyandotte, Michigan, came up with hisw own solution. He simply soldered a wire bridge across diode D203, disabling the low battery indicator entirely. The radio now operates uninterrupted until it blanks out when the abttery level drops to about 4.5 volts.

Yet another suggestions from a Canadian reader would bridge the original diode with a 6.8K resistor, defeating the premature recharge signal, yet preventing the battery from too low a discharge.

From MT
June 1990, page 98
Bob's Tip of the Month

BC200XLT BATTERY LIFE EXTENSION: Part II

Every time we run a helpful hint on a popular product, someone find an even more helpful hint! This one disable the low battery cutoff circuit and adds several hours of operation to a single charge. Our lab unit was still going strong after seven hours straight! Uniden will provide the fix for free, but if you're in a hurry and don't mind voiding your warranty, read on!

NOTE: This modification should not be attempted by anyone unfamilier with small circuit oard components.

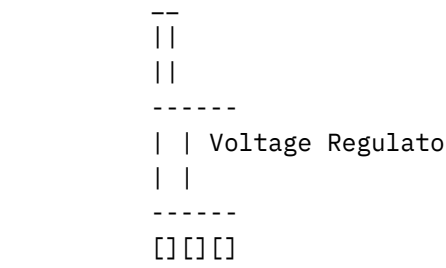
The tools: You will need a small Phillips screwdriver, fine-tip soldering iron and solder wicking braid.

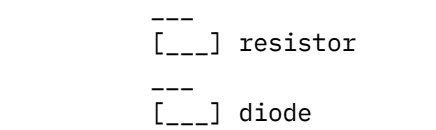
The procedure: Remove the battery pack, then the two screws form the bottom spring clip. Carefully pull the rear cover off, bottom first. Remove tjhe two small screws at the base of the circuit board. Pull the front panel away from the mainframe, bottom first.

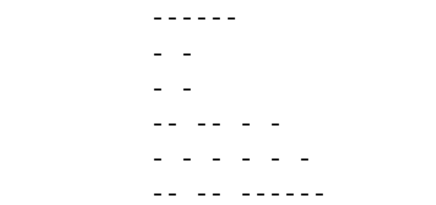
At the bottom of the remaining board--to the left of the speaker magnet--are two blue electolytic capacitors; just above them are two striped components-- one resistor and one diode. Using the soldering iron and braid, carefully remove the two components without overheating the board or damaging the copper traces.

When you reassemble the radio, be very carful to note the insertion of the front panel into the slot at the base of the volume/squelch panel. Be especially careful to align the screw holes perfectly, allowing the two rows of fine pin contacts to mate correctly with the socket. If this is not done correctly (and it probably won't be the first time!) no damage will occur, but the scanner display will be blank.

Recharge your batteries after 6-8 hours of heavy use. If
the scanner dies, recharge it as soon as possible to prevent
loss of your memorized frequencies.







capacitors (2, round) Speaker Magnet

Yet another Uniden/Bearcat 200XLT modification, courtesy of Bob Parnass and
other good people:

BC200/205XLT CELLULAR RESTORATION

Note: It is unlawful to monitor cellular telephone conversations. It is
possible to monitor signals from the deleted ranges even without conversion.
Simply add 21.7 MHz to the deleted frequency and enter the higher (image)
frequency. Reception is virtually identical in strength to that which would be
heard on the deleted frequency.

The frequencies deleted at the factory may be restored, but the procedure must
not be attempted by anyone unfamiliar with electronic circuitry. Grove
Enterprises assumes no liability for damage caused by this procedure. The
modification will void your warranty.

TOOLS REQUIRED: Small Phillips screwdriver, small wire cutters.

1. Slide off the battery pack and remove the antenna from the scanner.

2. Using a small Phillips screwdriver, remove the two screws from the
back of the scanner, the two screws which hold the battery retaining spring at
the base and the spring itself.

3. Carefully pry the bottom of the rear cover from the radio and remove
the cover.

4. Locate the two small screws at the base of the circuit board and remove them. Gently pull the front panel from the mainframe at the base and separate them.

5. Locate the (64 pin quad flatpack) microprocessor IC labelled "UNIDEN UC-1147" and the 10k ohm (brown-black-orange) leadless resistor positioned above the letters "DEN" on the IC.

6. Using miniature wire cutters, cut the resistor body in two without disturbing anything else near it. If the left solder pad comes loose, it may be peeled from the board. Brush or blow away any residue. This completes the restoration.

REASSEMBLY

7. Insert the top of the front panel into the slot under the volume/squelch control panel and, noting carefully the alignment of the dual inline connector at the bottom of the board with the mating socket, press the front panel firmly into place. Be sure that the holes at the bottom of the circuit board line up with the holes in the plastic standoffs below them. Insert the two screws and gently tighten them.

8. Replace the back cover by inserting the top of the cover into the slot under the volume/squelch control panel; press the cover into place, insert and tighten the screws.

9. Reposition the battery retaining spring (slotted side toward notched hole), insert the two remaining screws and gently but securely tighten them.

10. Slide the battery pack into place; switch the scanner on to make sure the display comes on. If not, the battery is discharged or the dual-inline connector was misaligned during assembly (see step 7).

Assuming the display comes on, press: MANUAL, 845.0, E; within two seconds, the frequency 845.000 should appear on the display.

Modification for Putting BC-220XLT In AM Reception Mode

I have come up with a crude mod for the BC200xlt scanner to allow AM reception in the 136 to 174 range. Why would I want AM in this range you ask? well I attend several Air shows during the year and the Thunderbirds use 140 mhz area fregs. As we all know the Uniden switches to FM in this range, causeing very distorted reception (slope detection). Somebody else may have already thought of this idea (you?) but here goes. Break the AIR Trace between dual diode D31 and IC1 pin 8. Connect the center of a single pole - double throw mini switch to the trace leading back to IC1 pin 8. Connect one of the other poles to the trace leading back to D31. This is the "Normal" mode(This just restores what you have cut). Now connect the other pole to the VHI (VHF HI) line at a easy to locate point. This is the "AM" mode. What will happen now is when AM is selected the VHF and VHF air band will all be in the AM mode. UHF and others are not affected. When in the normal mode everything is just like it always was. I have done this mode over a year ago so it's still a cloudy in my memory. But it works like this: The microprocessor sends a high to Q7 to select the AIR mode, by routing the VHI signal around D31 by means of the switch the AM detector is reselected. Normaly D31 blocks out the VHI signal allowing FM in the VHF HI range. I hope my explaination of this mod is clear. It does take some delicate surgery to do. I also hope I haven't duplicated anyone elses idea.

Thanks

Sorry to post off-topic, but this thread has already gotten there. Not using a person's real name and email is not necessarily indicative of cowardice. For some, it is an attempt to preserve a measure of anonymity that has fostered the growth of the internet (and usenet, I might add.) I'm sure I'll get flamed for this, but just think about it...

A good ground is a good ground no matter what the frequency. You would probably have to be careful of other devices spitting out RF garbage on a house ground, though. Granted, most houses' AC ground is wired incorrectly. (You can check this with a multimeter... Hot AC to Neutral, Hot AC to ground) I remember seeing some statistics not too long ago that noted that something like 50% of all residential household connections are not grounded properly. Also... At the frequencies that RF operates, wouldn't those frequencies be shunted to ground thru poor wiring simply by capacitive inductance? At any rate, I agree that the best ground would be an earth ground rod.

In believer INMARSAT is an acronym for International Maritime
Satelite. There are several of them. They were initially developed to
provide reliable communications (voice and Telex) for ships at sea (at
a cost per minutethat will make you think twice before you place the
call).

The service has been expanded. The portable sat phones you see, are
designed to utilize an Inmarsat bird. The telephones you see on long
haul international flights also use Inmarsat.
>
>What is on this satelite ? (is it intersting ?)

Satphone conversations, and traffic for ships at sea.,
A small dish will do (1 meter is plenty),

I have no idea of the signal formats however.

861. ICOM PCR-1000 versus WINRADIO receivers...

Newsgroup: rec.radio.scanner
Date: 1998-01-07 00:00:00 UTC
From: len999@ibm.net
Message-ID: <34b983ba.4250743@news2.ibm.net>
Source record: 174768

Has someone out there compared these two radios?

I'm in the process of selling a lot of old radio stuff and getting a
new system oriented toward my PC. I have not been overly
impressed with this format in the past...however, Icom has entered
the fray and they generally do a pretty good job.

The basic questions are:

1. In regards to noise...which of the two PC radio systems are quieter

or shielded better. Logically the ICOM unit would be the better of

the two. Over the years I have installed components that are super
quiet as far as EMI/RFI is concerned, i.e., NEC "e" series CRT's
(absolutely no birdies) and an Enlight case with an outstandingly
quiet power supply..and ferrite loops, etc. So I have minimized
this issue. Logically the WinRadio would survive in this
environment. However, being external to video card radiation,
the ICOM should be quieter. Is there any part of the frequency
spectrum that is unnaturally noisy compared to the remainder
of the spectrum? Shielding issues?

2. Sensitivity...which unit seems to have a better s/n ratio? Again,
the ICOM being external, would seem to get the nod. Anyone
paid attention to this issue? For example, on 80 meters, on SSB
on a quiet night...a ham from the VE land, say the west coast
of Canada...does the inherent noise of either receiver fail to
make a Q-5 signal readable? Understand I'm in the SE.
Anyone paid attention to this basic stuff? Also, listening at
noon on 80 meters...is it sensitive enough to pull out the
stations buried in the mud when the band conditions
normally go out. A situation when inherent receiver noise
can really be a factor. We're talking about the situation
where the signal would normally be a Q-5 but isn't due
inherent noise levels when the signals are marginal.
Much of what we are discussing here is shielding around
the card...the external qualities of the Icom would logically
make it a quieter unit. Even on a well thought out PC...
(low radiation cards, power supplies, etc) it is still a
questionable environment for a radio. Almost any radio will
pull out the loud Commercial shortwave stations at night.
Even the cheapest radio out there can receive this stations.
I'm not overly concerned about receiving these stations.

Also, is there any spectrum of frequencies that seem a bit down
in sensitivity...i.e., does the 600 to 900mhz frequencies hold up
sensitivity wise compared to, say, below 30mhz?

3. Selectivity....again, let us listen to SSB on 75/80 meters, on
a night when the "quirmers" or working alive less than 3kc up
the band...does the filtration work well enough to clamp down
on bad splatter...as would a decent communications receiver?
Which reminds me...is there some of the PLL stuff and other
components of the I-8500 buried in the PCR-1000? Has anyone
looked closely?

4. Reference the scanning issues....I've read briefly on this group
where the WinRadio seems to have the edge here. In just what
regard? Number of frequencies scanned at one pass...inability to
include other groupings of frequencies...just what?

5. The CRT presentation of the Radio and its controls...
Which of the two are superior and more logical...I am not
overly impressed with the ICOM examples on the Net. Most
of the comments here indicate WinRadio is a bit better.
Also, I haven't seen any independent suppliers of control
programs for the PCR-1000 yet. Probably a little early!

Oh yes, in regards to the comments about needing another card for
attaching the ICOM. Almost all of the newer, better motherboards
have a Com1 and Com2 outlet on the board...just attach it to
the Com2 outlet..not a problem...very simple actually. Some of
these boards are, Shuttle 569, Abit Px5, Aopen, etc. Also, these
boards generally exceed FCC regs regarding RFI/EMI..they
are pretty quiet. Be watchful of some Video cards, however!
In regard to soundcards...look closely at the Turtle Beach
series...strong engineering...quiet..low radiation in the
cabinet. The new Malibu card is very good and it is
available at places like Best Buys...good prices, etc.
Would seem to be a plus for the WinRadio card.

By the tone of this note..you will sense I'm concerned about
fundamental radio qualities as opposed to scan speed, etc.
Anyone out there have a handle on these issues?...Is there
any area where it is obvious they have compromised on these
types of radios? In regards Sensitivity, Selectivity, noise rejection.
I am interested in Scan issues...but it has a low priority compared
to the afore mentioned issues.

Also, how is the audio on the units...let us say, in the wide position
played via a decent amp/speaker system? Has anyone tried this?

Many thanks,

Leonard...

P.S. I assume the only way to get the Icom audio back into the
soundcard is to route a cable back into the soundcard input. I

assume there is no audio on the control com2 cable.

What is your opinion on the RG 213 UBX coaxial cable ?

Even though it is quite expensive,it is without any question
the best cable I have used to date. Without any "boosters" or
amplifiers,using abt. 80 feet of this cable (from ground level
to abt. 60 feet ,connected to a Mini-Cone Discone) I get hardly
no detectable hiss or disturbance caused by the cable itself.

Is this cable buildt to meet military specs? I have seen a
listing on different types of coaxial cables, ant this one
does seem similar to very expensive mil.spec cables?

It was a simple solution. I connected my VCR directly to my computer running Windoze 95. Under the Start menu, I chose search, then entered "Agent Mulder's cellular phone frequency" then pressed enter. At that point, the VCR started in playback mode. Within seconds, the frequency showed up on the screen. It was 871.110 MHz. I hit enter again, and the VCR went into rewind/search mode until it found the beginning of the cellular call. At that point, the VCR switched into playback mode, and both sides of the conversation could be heard clearly.

Bill

Right you are, microwave oven magnetrons aren't operated in pulsed mode.
They are operated in CW mode (magnetrons *can* be operated in pulse mode,
but those in microwave ovens aren't). When reduced output is required, they
are cycled on and off, but this isn't what would normally be considered pulse
modulation since the cycle times are measured in seconds.

One can modulate a microwave oven magnetron, however. It is possible
to injection lock the magnetron to an external reference. If you FM modulate
that reference, the maggie will follow it. So you can get several hundred
watts of FM modulated RF from the maggie that way.

Gary

Look at the date-code on the scanner. Units made after April 1994
(date code 4A4 and beyond) do not have the jumper present and cannot
be modified to enable the missing 800Mhz frequencies.

My friend showed me how he did a mod on the little radio so he can now talk on the family service bands as well as the radios that his company uses. Unfourtunatly it didn't work on mine and my radio was also missing a componant in addition to the two missing links.

Any one have another mod or info on the missing part???
It looks like a micro diode.

Thanks,
Scott

871. BC100 and 200XLT light modifications results

Newsgroup: rec.radio.scanner
Date: 1998-01-08 00:00:00 UTC
From: dcs4.NOSPAM@psu.edu
Message-ID: <dcs4.NOSPAM-ya023580000801981509490001@news.psu.edu>
Source record: 174428

Ten days ago I modified both of my Bearcat handheld scanners, a 100xlt and a 200xlt, so that the light behind the display would always be on. I carry the 200xlt in my car and listen primarily as I drive back and forth to work. It is used about 40 minutes each way each day, five days a week.

I had run an initial test on the 100xlt after the modification and found that it ran for more than six hours before the battery ran low and it shut itself down. That test didn't mean a lot to me, but it did suggest that the modification would not drastically alter battery performance.

With the 200xlt prior to the modification, I would typically charge the batteries once a week under the usage pattern I described. I usually did that overnight on a weekend. I charged the batteries last Sunday evening and ran the scanner as usual this week.

I found the low-battery indicator flashing this morning shortly after I started my morning commute, and it actually shut down before I arrived at work. Today is Thursday, so I would conclude that if other factors remained more-or-less equal, then my modification did shorten the battery life measurably in actual usage.

On the up-side, I'd have to say that in all but ideal lighting conditions, the display is much easier to read now than it had been without the light. I may need to get into the habit of charging it twice a week instead of just once!

Alternatives would include finding a mobile scanner for the car or powering the 200xlt from the vehicle's electrical system at least some of the time. When I've tried that in the past, I've found that it creates interference on certain frequencies that screws up scanning. Maybe it just isn't grounded properly, not sure, but I don't get that same interference when the scanner is operated on battery power.

- Dave

Message-ID: <-0801980939540001@sfo-ca26-36.ix.netcom.com>
Source record: 174531

Two questions:

1) When listening to images on a scanner, it it best to adjust the
antenna length to that which is suited for the original signal frequency
or the frequencies where the images appear?

2) I am using the Radio Shack 20-006A whip antenna. How does one take
the loading coil into account when calculating antenna length?

Thanks in advance,
Mike

: Harry

The information I've seen (though I can't confirm this) is that
the ch 41-49 range is currently unprogrammed - ie, left for
future expansion.

51-81 are rx only? That's intriguing. I can think of a couple
of possible reasons - the most likely is politics. I can't
offhand think of a single PD in socal that condones access to
their radio system by outside agencies (except in the case of
RNTF-type operations).

The LASO is still a presence to be reckoned with. My guess is,
they said in no uncertain terms that outside agencies were not
welcome on the LASO specific frequencies, and set up a protocol
whereby units from outside agencies could contact the SO on
SRC Access and be handed off to a Mutual Aid freq... (all of
which are tx/rx in the Astros, unless there's more that you didn't
tell us 8*)

I have a mint Yaesu FL-2100b Linear Amplifier designed to match the
Yaesu Ft-101 series transceivers. Plate input: 1200 Watts PEP, 1000
Watts CW, and 600 Watts AM, Grounded Grid Class B.
Requires 110 or 220 AC currently wired for 110AC, Forced air cooling,
wt. 41 Lbs.
Has orginal protective plastic covering the face! Tubes are 2 X 572b
triodes and are solid.
This amp is top of the line in every respect, Price is only $450.00, but
might consider a trade. I have just to much equipment and need to down
size, I have 3 amps and I can't use all of them.
Price includes orginal manual, but not shipping! Shipping is Extra!
73 & best wishes
Al

882. 895XLT and Computer Control

Newsgroup: rec.radio.scanner
Date: 1998-01-08 00:00:00 UTC

Boy I didn't know what I was MISSING!

You simply MUST make a computer control interfafe for your
895XLT! It makes it a BREEZE to use! There are so many
powerful scanning programs out there!

BC895XLT PC Interface Cable Diagram
Note that there are five pins in line on the back of the radio. Only three
are used; the connector may be plugged in either way round, since the two
outside pins are shorted together and the two pins on either side of the
middle pin are also shorted together. Here's the connections for a suitable
cable.
PS I use part # 279-765A for the plug on back on Bearcat Scanner!

PC Port PC Port
RS-232 Signal BC895XLT
(9 Pin) (25 Pin)
Transmitted Data 3 2 1 or 5 (shorted inside
radio)
Received Data 2 3 2 or 4 (shorted inside
radio)

Ground 5 7 3
The radio must be in "remote control" mode for the computer to control it.
This
is indicated on the radio display by the letters RMT just to the right of
the frequency readout. To place the radio in remote control mode press and
hold down the ALRT/RMT button on the BC895 radio until it beeps twice.
This will initialize the serial port and establish communications with the
radio.
When finished you can restore local keyboard control of the radio by
touching the ALRT/RMT button again. The state of RMT is maintained by the
radio when power is cycled on and off.

886. Wanted: Used Base Scanner

Newsgroup: rec.radio.scanner
Date: 1998-01-08 00:00:00 UTC
From: Tony Heatwole <heatwole@clark.net>
Message-ID: <693d7r$aje@clarknet.clark.net>
Source record: 174540

Hello. I'm interested in getting a used base station scanner. I would prefer to trade for one, but I will consider buying one. Or perhaps a trade/money plan. I'm mainly interested in Radio Shack and Uniden Bearcat models, but will consider all. If you have one for sale please e-mail with condition, any mods done (sharper squelch, cellular, etc), what it comes with (manual, original box, etc), and what you want for it. Here's mainly what I'm looking for in the scanner:

-Good frequency coverage (let me know specifics)
-Cellular coverage would be a big plus
-A frequency turning knob (not a must, but a big plus)
-Data skip feature would be a plus
-Delay, manual, scan and search, lockout, and delay features
-Has to be a base scanner
-200 or more memory channels (preferably 500 or more)
-Truck tracking would be a big plus
-Turbo search would be a big plus

Let me know!

Nat Heatwole
heatwole@clark.net

Hi folks. For anyone currently mastering a radio scanning, police or emergency communications, 911, or other relevant web site, I have finally put together a simple Open Broadcasting banner which you can post on your site and have link back to the Calling All Citizen site at http://members.aol.com/truth4000/page1.htm . The banner is available at said site near the bottom and I urge anyone who cares to copy, post, and link.

The direct link for those who want to pull the banner over the net for whatever reason is http://members.aol.com/truth4000/cacban.gif . However, I hardly recommend this approach because it could result in a slow draw on your web site.

Dave

HOW TO SCAN THE 800MHz BAND ON ANY SCANNER!!!!!!!!

> You can make your scanner tune the 800 mHz band by simply taking an
> old, but working UHF TV tuner.....

I build up one of these several years ago, and
still have it. I installed a UHF tuner from a junked JVC tv
inside a Radio Shack cabinet with a 9v battery and RF input
and output connectors.

It worked, though drawbacks include low sensitivity and
mediocre stability.

You might find this interesting:

CONVERT YOUR CORDLESS TELEPHONE TO 800 MHZ?

Copyright 1988, Bob Parnass, AJ9S

Convert your cordless telephone to receive 800 MHz? Yes,
I'm quite serious.

How do you convert a 47 MHz cordless phone to 800 MHz? With
a converter, of course!

But you don't need a fancy $99 Hamtronics converter. All
you need is the UHF tuner from a spare television set that
was manufactured when TVs still covered channels 14-83. I
used the solid state, tuneable UHF tuner from a cheapie JVC
television set given me a few years ago.

This tuner seems typical of the type available in TVs for
the past several years. It uses a variable capacitor, not a
varicap diode, to tune channels 14-83 (470-890 MHz), and
convert them to an IF of 47 MHz. If 47 MHz sounds familiar,
that's because it is the upper edge of the cordless
telephone band. A cordless telephone is just a full duplex
46-47 MHz FM receiver and 49-50 MHz FM transmitter in the
same case.

Since I don't own a cordless phone, I used a scanner tuned
to 47 MHz and connected its antenna jack to the IF output of
the TV tuner. My tuner required a 300 ohm impedance
antenna, so I placed an ordinary TV balun between the tuner

input and my scanner antenna.

The IF is pretty broad - at least 10 MHz, so I tune around on my scanner, rather than use the very coarse tuning control on the tuner itself.

This tuner lacks an RF amplifier, so it's not as sensitive as a modern 800 MHz scanner, but I sure hear a lot of stations between 460 and about 890 MHz!

My tuner works well when powered at 6-9 VDC, and since it only draws about 10 milliamps, I use a 9 volt alkaline battery. An article in January 1988 Ham Radio Magazine describes other TV tuners, and suggests ways to put them to good use.

WARNING: Listening in on mobile phone conversations is now against the law.

The cable can be built for approximately $8.00 worth of parts from Radio Shack and a local computer retailer.

And remember, the a fully functional 30 day copy of PC895, the computer control program for the Uniden BC 895xlt is available for download from EnterDev Software at http://www.ipxnet.com/home/enterdev/bc895.html

Boy I didn't know what I was MISSING!
You simply MUST make a computer control interfafe for your
895XLT! It makes it a BREEZE to use! There are so many
powerful scanning programs out there!
BC895XLT PC Interface Cable Diagram
Note that there are five pins in line on the back of the radio. Only three
are used; the connector may be plugged in either way round, since the two
outside pins are shorted together and the two pins on either side of the
middle pin are also shorted together. Here's the connections for a suitable
cable.
PS I use part # 279-765A for the plug on back on Bearcat Scanner!
PC Port PC Port
RS-232 Signal BC895XLT
(9 Pin) (25 Pin)
Transmitted Data 3 2 1 or 5 (shorted inside
radio)
Received Data 2 3 2 or 4 (shorted inside
radio)
Ground 5 7 3
The radio must be in "remote control" mode for the computer to control it.
This
is indicated on the radio display by the letters RMT just to the right of
the frequency readout. To place the radio in remote control mode press and
hold down the ALRT/RMT button on the BC895 radio until it beeps twice.
This will initialize the serial port and establish communications with the
radio.
When finished you can restore local keyboard control of the radio by
touching the ALRT/RMT button again. The state of RMT is maintained by the
radio when power is cycled on and off.

I've just started the Baton Rouge Area Scanner web page.

http://home.att.net/~hitchner/

This page has two purposes:

1. The exchange of information on scanner in the Baton Rouge area.

2. Personal project to expand my programming experience.

This page is in it's early stages. In fact, I just started this afternoon after I discovered
that AT&T now allows 2MB free web space. The future of this page will be determined
by response.

While I'm at it I would like to thank others who have spent their time developing web
pages and answer NG questions to further the hobby. It's people like David Stark,
Rich Wells, Bob Parnass, Bill Cheeks (I know some of you don't agree but the truth
is undeniable) and recently Lindsay Blanton and Warren Whitby with their Trunking
pages that have made my search for information much easier. I also hope to contribute
and learn more about the hobby though this experience.

I'm not familiar with any scanners that have DTMF decode capabilities. I recently got the Optoelectronics Techtoyz mini DTMF decoder and have been very satisfied with it's performance. It looks exactly like a Motorola Bravo pager and will store up to 2000 characters. For more info here's the URL and they ship COD.

It is true, I never been enrolled in ANY college level courses in Oregon. All my training was out of state, primarily in Iowa, Nebraska, South Dakota, & Texas plus a little in Washington and Minneasota. Did I ever claim to have attended coursework in Oregon? (NO, you FOOL, I never did)

If you knew anything about radio & regulations, you would have recognized my callsign as having been issued it an area completely different than Oregon. That would have tipped you off that my early years were elsewhere.

>
>
> thanks
>

The short answer is, you can't do that, because the antenna only gives you a direction, not a distance.
Any directional antenna will do that, though. It won't point in the right direction *by itself*, but you can point it in the right direction by hand, by rotating it, and watching a signal strength meter; when the signal strength is highest, the antenna is pointed in the right direction.
For hand-held use, you might want to build your own antenna, tuned to the exact frequency you are curious about. There are many good antenna books out there, and rolling your own not only gets you exactly what you want, but is fun, too.

Hi!

I would like to know how to modify a Pro-67 and Pro-2040?

If you have any informations about that, I would like to know, Thanks

The answer is probably yes. The cell band is where some US UHF
channels were originally allocated. Most TV's used to have the 1st IF
at 40-50Mhz, and it is about 5-6Mhz wide. Understand that TV tuners
are not the most sensitive receivers out there. The signal for TV is
usually in millivolts at the antenna, you need huge S/N ratios to get
a good picture, and it doesn't take much of a front end to do that
with 100mv at the antenna. As a University student I remember seeing a
demonstration of a spectrum analyser looking at a TV signal. We just
hung 1 foot of wire from the input....

The monitoring of these channels is still very much illegal in the
USA.

Remember that a TV channel is only about 6Mhz wide, the forward and
the reverse channels for AMPS are each 25Mhz wide, so this will only
allow you to scan about a quarter of the channel.

That's all well and good, particularly if you need to
discuss sensitive subjects like medical treatments,
psychological counseling, etc.

It is not so well and good to use anonymity to flame
and attack others.

THAT *is* cowardice.....

Offhand, I'd say that you'd be better off using RG-58 or RG-8x, or some other
50 ohm cable, but for a receiver I don't see any significant problems to using
75 ohm (RG-59) cable....

There is nothing secret, magical or mistical about them. They're just
16 pairs of audio tones that are sent down the line.

This is a post from an ancient Fidonet message that I've kept.

I presume you mean the tones used on a touch tone phone when dialling.

DTMF Signalling. (Dual Tone Multi Frequency)

Each signal comprises two simultaneous transmitted tones of different
frequency. Up to 16 different signals may bee transmitted
sequentially
by standard DTMF signalling.

DTMF Signalling will consist of the serial transmission of the digits
in the form of Voice-Frequency signals in accordance with CCITT Rec.
Q.23.

Pairs of frequencies are allocated to digits and special signals in
2 of 4 code

High Group (Hz)
1209 1336 1477 1633
Low 697 1 2 3 A
Group 770 4 5 6 B

From my own somewhat limited experience I'd have to agree. I have a Pro-60, which is a very nice scanner (though I don't think the scan rate is quite as fast as yours.) The local departments have all moved toward trunking lately, and I've found it practically impossible to follow their exchanges. By giving the scanner my entire attention and manually flipping through the frequency range I could sometimes catch the drift of what's happening, but it's a serious irritant and hardly a relaxing hobby.

I broke down this past weekend and bought a Pro-90 when it came on sale, and I have not had cause to regret it. It's easy to set up and it makes it trivial to track the desired talkgroups. I have a feeling that it will come in handy as the winter weather worsens. I only wish I had it earlier. The Pro-60 is still handy to have for it's extended frequency coverage, but I think I'll get more practical use from the 90.

If you wish to verify the compatibility of your local system with the scanner I recommend visiting one of the many pages devoted to trunk tracking and seeing what's listed (http://members.aol.com/wwhitby2/trs.html comes to mind) and try a DejaNews search. You should also ask at RS and see if they can provide any additional local information (one of the local employees was a Volunteer Fire Fighter who provided a complete directory to two of the local Carroll County, Maryland systems.)

When you consider that the RS Trunktracker is the exact same unit as the Uniden one (they didn't even change the antenna to RS standard), the $299 price is fantastic. Why would you even buy one that doesn't do that? Nowadays it's almost mandatory if you want to scan local government freqs. GET IT!

This is true.. Back in the days when the only real BBS's that you could
access (without phreaking or paying exorbitant ld phone bills) were all
local, if you posted your real name and pissed someone off, chances are
that you would wake up with your mailbox smashed, etc... harassing phone
calls (before caller ID, etc..) I know a few times we did things even
worse than that to people who crashed our BBS... I guess it's a throwback.
However, if everybody was using their real name, and the government
decided to get involved in regulation of the internet, that would kinda
fuck everyone. Oh.. and I wasnt flaming anyone, Bill, just expressing an
opinion. You kinda have to use the internet with an understanding that
anonymous people are gonna say and direct things at you that you find
unsavory, and there's not a whole lot that you as an individual can do to
change it.

944. Re: space shuttle frequencies

I would like to say that from what I have heard and read,Bill Cheeks
does a lot of things to help a lot of people. He works hard to find out
all the things that most of us would never know of if it was not for
him. I fully understand that he has to charge for the books and
publications that he puts out but he also gives out a lot of free info.
about scanners to lots of people.
I can't understand why so many people say so many bad things about him
on this NG. I think he is a fine fellow and should be taken more serious
than lots of people seem to take him.I have never met the man and am
sure I never will but he has been nice to me every time that I have
asked for his help. Just my thoughts.
Thanks for reading this.

You have a couple of options open to you. First, you could try to get RS's discone ant. It's an excellent omni-directional that is small enough you could mount it on a 3 foot mast mounted to a plywood base of about 1 square yard. Then put it indoors! I have done this for the same reason you have a problem now... APT MGRS! I get extremely clear signals with it inside a closet next to my water heater. I also got an adapter that lets me use it on standard RG-6 coaxial cable for a TV antenna... no more rabbit ears or cable! The RS cat # is 20-013 and they're currently on clearance for just under $30. They have a new model with a 50 MHz whip on top for all you "hams" out there as well, but it's $60. Another option is to get a TV signal booster or the like, but it depends on what freqs you listen to. Remember as well that you can only amplify a signal you're already getting! You can't pull in something on one your antenna won't. Have fun and e-mail me if you think I'm nuts, just a little off, or not too dumb after all.

Strong Signal

948. Re: US Rep. Billy Tauzan (oops, sorry)

Does anyone know where I can have my radio worked on? I want to be able to listen to cell phones and this scanner has it blocked out... The pricks made it this way because of a law that was passed, which states that we Joe public are not allowed to listen to cell calls!!!! Boy isn't that just bullshit.....
If you would please reply to jsh83@hotmail.com

Can't help you with the date so I'm not sure if this applies to your scanner.

Subject: Bearcat Mods

Netlanders:

Concerning the Uniden Bearcat 760xlt, the mod for the 950xlt does work to restore lost freq. Disconnect pin 20 of the microprocessor from the circuit board and connect it to pin 19. I bent the pin slightly and cut it with the scissors of a swiss army knife then soldered an 1/8 lead cut from a cap across the pins near the top of the chip. I've yet to find any problem with this mod. But as always do so at your own risk.

I have a friend who recently received the new catalog and they have
scanners. Techam is part of the Tandy Corp., you can go Radio Shack
and get a copy of the catalog. It sounds like you got a good deal on
the HT, however I just purchased a PRO2042 scanner from RS on sale for
$299 (reg $399). In the Techam catalog the same scanner was listed for
$499. Go figure.

> faster. I imagine that a Pentium would be close to 'real-time'. I've
> not explored the effect of a faster UART serial port, allthough at 9600
> it shouldn't make any difference.

I am running the EDACs program on a 486, but it is still slow, and doesn't respond much faster than 2-3 seconds after a transmission starts, sometimes slower, sometimes faster. It also misses short transmissions.

I don't know if it is just the display being updated slowly, or if the comm port would control a radio faster than what the display is showing.

With the work that has been put into that code, it sure would be good for someone to start a web page and a single place for subsequent refinements to that program

Are there any takers out there in Net land??

This is beyond any doubt the most stupid response I've seen in a long time.
Now, are you waiting for me to come over to your place, download the
software for you, and install it on your computer to show you that it DOES
work with a variety of modes, shifts and baud rates? Would I have to
program your receiver with the right times and freqs, as well, so you just
have to sit on your lazy buttocks and watch the screen?

Bewilderedly,

Here you go:

Space Shuttle/Mir Radio Coms - Updated 7/11/97

Shuttle amateur Radio experiment (Sarex) Downlink: 145.550 FM
This is for both voice AND packet modes. So if you hear short
bursts of noise they are in packet mode.

Some amateur radio 2 meter FM repeaters carry live air to
ground coms. Scan the 2 meter band between 144.000 and 148.000
or ask a local ham if they know of any freqs in your area.
If your in the NYC metro area try the W2FCL repeater in Northern N.J.
on 146.610. I pick this repeater up from about 100 miles away.

On HF, WA3NAN - the Goddard amateur radio club
re-transmits the missions on: 3.860 (all freqs. in single side band)
7.185
14.285
14.295
21.390
21.395
28.650

These are dependant on propagation! In South Eastern N.Y. I pick them up on
the 80 and 40 meter frequencies (the first 2) the best.
They I.D. in morse code and voice. Park on a freq. and listen awhile,
coms are not non-stop! There are sometimes long breaks in the action.
When the astronauts are asleep they are off the air. If the weather is
bad at the station or no control operator is available they won't be
on the air either. This is a volunteer service. Thanks to WA3NAN for
providing this service!

Mir 2 meter FM amateur radio downlinks are on 145.800 (Europe) and 145.985
in the U.S. These are for both voice AND packet radio. So if you hear short
bursts of noise they are in packet mode. They are in packet mode most of
the time, especially after 2000UTC. (their 8 hour sleep period)

There is a ground control freq. of 143.625 FM that is sometimes
used as well, but NOT for amateur radio. I hope you speak Russian!

Mir is also now on 70 cm with voice downlinks on: 437.950
437.925

Packet downlink: 437.975

Happy listening!

Yes, but maby not. THEY already have the POWER to confiscate anything
you have in your possession. In other words thay can if they want to.
The law is on their side.
One example. Don't pay taxes They take your possessions. Let a pissed
off neighbor plant 1ugm of crack in your car then call THEM and say you
are a drug dealer, one of THEM wants to make a QUATA BUST, THEY bring
in the dogs. You loose everything, car, house, boat, plane, dirty stuff
on th harddrive, pics of the ol lady and BUSTER at play in the bedroom.
Look what has been going on on I 10 in Lousiana for years. You drive a
rented lux'ry car thru Sulphur and you'r busted. on and on and on.

You need at least 2, and preferably 3 stations with directional equipment before you can "pinpoint" a station. With just one station...the best you can do is say which direction the signal is coming from...but not from how far away.

You need a directional antenna...something like a TV antenna turned on its side.

Almost all the Uniden scanners and the Uniden made Radio Shack scanners have that long squelch tail. I got rid of a PRO-51 because of it. I replaced it with a Uniden Sports Cat 150 and damned if the squelch tail on it isn't longer than the PRO 51.About a foot long it seems. I know of nothing that can be done about it.

Hi Guys,
Reducing the price on the R-10 thanks to Icom's current price reduction on the new models. You gotta love'em, buy something new and they kill your resale value a few weeks later with sale coupon for $100 off! Anyway, this R-10 is as "new", still in the box with paperwork and plastic bags. It has full coverage from .5 Mhz thru 1.3 Ghz...yes, that includes the cell freqs. It works and looks perfect. I would like to sell it to put the money towards a HF rig. I will ship it to the lower 48 for $365 US Postal Money order. If I can't get that, then I'll keep it.
Thanks, Jack

We are becoming less free with each passing day as Klinton pushes for new regulations that do not have to go before Congress for approval. For instance, the EPA has begun to use an old law that stated something to the effect that if an emergency existed, then the EPA could write rules and regulations which would not have to go before Congress for approval. Carol Browner who heads up the EPA is in on the push for socialism/communism just as much as Klinton is.

THE PLAN.

All the liberals in high office are aware of the objective: Global Socialism under one Global Government. Americans are too free and too rich, therefore, we must disarm them, reduce their educational level in the public "government" schools so that they are dumbed down in many areas, especially in US history. God must be removed from as many places as possible. Patriotism must be made fun of and all who claim to be patriots must appear as radicals. Class envy is a good tool to divide the country along social lines, so it must be used in the media.

Traditional American Family Values must be crushed. Down play the value of life. Increase the power and scope of government on all levels. Raise taxes until Americans are paying in 85% of all earnings to some form of government. Create a "Carbon Tax" so that money can be taken from the rich nations and given to the poor nations. Make certain that the "Carbon Tax" is redistributed by the United Nations and allow the UN to keep 30% of it. Make Americans feel guilty about many issues, especially environmental concerns. Then they will be more willing to hand over liberties and freedoms along with more taxes to support our socialistic goals. Use "The Sky is Falling" scare tactics if the public seems unwilling to fork over more tax dollars.

Ignore the US borders so that many cultures will invade the USA which will allow the country to become much less unified. This will also prepare Americans for the culture shock that will occur when the borders are removed.

The NAFTA and GATT agreements are to be used just as was the Mastricht Treaty in Europe. 1. Begin open trade. 2. Soften border enforcement. 3.Begin to discuss a common currency between member nations. 4. Explain to the public that the border is now interfering with "Free Trade" and prepare them for the eventual removal of the border. 5. Expand the

agreement to as many nations as is possible and use the "threat" of the economic power of the European Union (EU) as a reason for expansion. 6. Begin to openly discuss the formation of a common government and the total relaxation of all borders between member nations. 7. Organize a common currency now that the public has been indoctrinated with "Globalism" and their patriotism has been removed. With the common currency and open borders, the natural progression to a common government will be quiet simple. Again, the threat of the EU can be used. IT will be very important to point out to the American public that the EU has begun to implement all of these features and that if the USA wants to compete economically with the EU, it must do the exact same things the EU has done i.e. no borders, common currency, and common government.

As the North American continent organizes, Asia is next with Europe leading the way for all the worlds nations. In a short period of time, we will have three spheres of power and then we can begin to align them (tri-lateral) all under a newly created Central World Government.
We will use environmental extremism and economic concerns as the means to overcome resistance.
Global Socialism will easily be accomplished, but there is one major factor that cannot be overlooked: The American Church. Far too many well informed Christians exist in the USA today to accomplish our goals without resistance! They will readily rebel against many aspects of our global plan, or "The Plan" as we have begun to call it.

The media must be used to ridicule the Christian church so that its image is degraded in the eyes of other not-so-religious Americans.
Once this has been accomplished, the public outcry against christianity will help to silence the opposition of the churches in the USA. We will win, but not without Christian opposisiton.

Just wanted to put my thoughts in...I'm employed as a Two Way Radio Tech, have my FCC license, Ham license, and have been into scanning-in a very serious way for several years now. Work at RS part time, and have just given notice. Why?? Because the Manager wants sales, not intelligent counter people. Sorry to say, his philsophy on customer service (Get 'em in, get 'em out) is poor. Unfortunately, sales does drive the economy, I guess the days are gone where a hobbyist could go to the local radio store and get intelligent answers, swap frequencies, and in general shoot the bull without being pressured to buy a celluar phone or change long distance service to Sprint (Expensive). I don't have a poor attitude, nor am I a nerd...just a tech who loves radio, and is only too willing to share with others. Just my thoughts.

Thanks guys for your reply. That includes you also Bob.

Uniden returned my call today about 1835 hrs. The Supervisor talked to me like I was a novice to electronics. She told me when I programmed the CTCSS board and the unwanted stations continued to come in, I should press the L/O button. Really sounds like Uniden Corp. of American has a up to date training course.

STOP - Let me tell it how I really see. Sounds like Uniden has a bunch of idiots working for them. Well, I sent the CTCSS board back to my supplier. When I install the new one and IF it doesn't work I am returning the scanner and getting another upgraded brand.

I must stay tuned for info on other brands. Haven't purchassed a new scanner since 1986 until now. (The 9000XLT)

Have a wonderful DAY.

RAMSEY has a kit for this that hooks up to the tape out of a scanner. I
don`t remember how much it cost, but I think It`s around $ 90.

I have recently acquired a REGENCY MX 4000 scanner. Any programing or technical information would be greatly appreciated. Of course, the ultimate would be a reproduction of the owner's manual.

Thank you!

It's true.

I am a Tandy stockholder (BTW, a good stock. It recently split and is trading around $37/share. NYSE symbol: TAN) and in their last annual report they made a big deal about TechAmerica.

About two years ago, they got screwed by losses from their "Video Concepts" chain, and another Tandy adventure, "Incredible Universe" is doing very poorly. All & all though, Tandy is doing well and I assume TechAmerica is another attempt to broaden customer base and increase revenue.

My local RS is freely distributing TechAmerica catalogs and they make no bones about their realtionship to Radio Shack.

Peace,
Charlie

Most likely, the radio covers the 30-50, 144-174, and 440-512 bands. As
for the antenna, make sure it's securely pushed in the hole all the
way. Replacement antennas can be purchased at Radio Shack.

> street address.
> We do not have this item listed at $229 as you have indicated.

$17.00 shipping for a package that can't possibly weigh more than a few
pounds? I sure hope for that price they ship overnight or at the very
least, 2nd day!!

To ship a five lb package from CEI in Ann Arbor MI to Rochester NY:

UPS Next Day Air $19.50 Post Office Overnite $21.55
UPS Next Day Air Saver $16.75 Post Office 2-Day $ 6.00
UPS Second Day Air $ 8.75 Post Office 4-Day $ 3.38
UPS Three Day Select $ 6.30
UPS Ground $ 3.26

10 lb packages are slightly higher.

So either CEI is shipping out next day, or they have a nice cash cow
with mail order!

For the foreseeable future, there are no plans for the Rochester and Monroe County agencies to go trunked. The only trunked public safety action is in Genesee and Orleans Counties. As far as Monroe County goes, you have Kodak which is entirely trunked, as well as the normal assortment of businesses on trunked systems.

I really haven't keep tabs on Radio Shack's recent offerings, so I couldn't give you an honest opinion. Generally speaking, Radio Shack scanners are of good quality.

FWIW, the 210XL scanner is a good, solid workhorse scanner... and for local listening (even with 20 or 40 channels... I don't remember) it's still plenty of radio.

Hope this helps.

Dr. Bellows wrote:

> I never quite understood auctions. Why would people compete against
> each other to see who can pay the highest price for something?!

It's called capitalism.

As a businessman (seller) I have the right to charge whatever the hell I want for what I'm offering. You as the consumer have the right to take your dollars elsewhere if you don't like it. It's a free market, and we each have an equal right to say "no".

How far the seller is willing to go down on his price (and how far the buyer is willing to go up on his price) is directly proportional to their individual levels of greed, willingness to gamble that someone else will come along and offer a better deal, and desparation to unload (or accquire) the item.

Case in point: I have a 10A, 48V power supply that I brought to several hamfests and tried to sell at a rock-bottom price because I was tired of straining my jewels trying to move it around my shop and out of my way. No takers. I lower the price down from what is already a good deal. Still no takers. I put a notice on the Internet offering it for free to anyone willing to pay shipping or pick it up at my home in northern Illinois. I COULDN'T EVEN GIVE THE DAMN THING AWAY FOR FREE!!!!!! I may end up paying someone to get rid of it. I took a chance and so far have gotten screwed. Tuff crap for me.

Of course, there is the insane chance that someone will come along and say "I desparately need this! I'll give you $1000 for it!!!!" It's a nice feeling, but I'm not counting on it.

Of course, if the product/service is misrepresented, that makes things totally different.

The whole idea seems pretty adversarial until you put it in personal terms: You have a 4 channel handheld crystal scanner. One person offers you ten bucks. another offers you $500. Who ya gonna sell it to?????????? You're a liar if you say the former.

No biggie. Just my opinion.

Charlie.

PS: Anyone want a 10A, 48V power supply?

Up in my mother's attic is a folded dipole base antenna cut for 45.08 MHz which made for great monitoring of the local FD on 46 MHz as well as neighborhood cordless phones. As everything up here is VHF-hi and UHF, I never bothered packing it when I moved upstate. This is a commercially made antenna... unsure of who.

Generally speaking, commercially made antennas cut to a specific frequency range is the best way to go for monitoring specific services.

Yea, go for it Peter. Proper grounding is one of the most
misunderstood issues in applied electronics. I've seen many good
designs fail simply because of poor grounding schemes.

Are there any 800Mhz or Trunked Systems that you will be monitoring? If so the 895xlt is a very nice scanner for the car as well as the Pro-2050. If you don't have a need for the trunk tracking feature but like to be able to monitor individual 800Mhz freq's then there are several scanners out there that will work (too many to list). Try Uniden's web site at http://www.uniden.com

Source record: 174431

I live in Northern Virginia and used to listen to fire and medical helicopter activity. I really enjoyed the hobby but had to set it aside for a couple of years (maybe 2 years). I was dismayed when I recently tried listening again to find no transmissions on the frequencies that were once so active. I remember hearing that Fairfax County was moving to a trunked system. Is this complete? If so, how does one now monitor EMS type traffic? I have several scanners, but consider my RS-2006 my main unit. Any hints or ideas? Seems the frequencies I have found searching on the internet within the last couple of days bear little fruit (no joy in Springfield tonight). All help to get me back up and going is sincerely appreciated.

Source record: 174432

Better buy is definately the 235XLT. You get two battery packs, and a battery charger. The Pro-90 only comes with the radio, antenna and battery pack. No trunktrackers on the market trunk-tracks in the 900 MHz range at this time.

Best signal capture for the frequency you want is with a resonant antenna... that means adjust your antenna for resonance at the frequency you want to pick up off the air; (Not the one necessarily on the display - as with using image freqs to listen to cellular.) This feeds the maximum possible strength to your receiver.

>2) I am using the Radio Shack 20-006A whip antenna. How does one take

In the case of the 800MHz band, the antenna itself is quite broad-banded anyway. Pruning it a little shorter probably won't result in an improvement of reception at all.

What would improve reception is tuning up your front end with the image frequencies in mind. Once again, the RX is quite broadbanded so it's very likely you'll hear the original frequency quite well.

If you do elect to re-tune the front end, and you know what you are doing, always tune a gang-tuned front end on the highest frequency you wish to receive. I can back this up with theory if anyone cares to know.

Cheers

I inherited an older Regency R1040 10-channel programmable base scanner.
I searched the 'net unsuccessfully for information on this unit.

I would like to know what frequencies this is able to receive. There is
an instruction label under the flip-up cover so I do know how to program
it and it does pick up some activity.

Also, There seems to be something missing where the antenna attaches. The
center pin of the antenna fits into the center hole in the back of the
radio but there is nothing to hold the antenna mast securely in place. It
appears there should be some sort of plug to surround the pin and create
a tight fit. The antenna has no means of supporting it upright, or in any
position, for that matter.

Any information or suggestions would be greatly appreciated.

Bill

Works fine for me!

Use conventional "F" crimp connectors on the cable. Then use "F"
connector to _whatever_ adapters.

The connections are tighter and more reliable than trying to
solder a PL-259, or BNC connector onto RG-6.

Make sure all the outdoor connections are weathertight.

From: mulligan@ACM.ORG
Message-ID: <694qnc$at5@hopper.ACM.ORG>
Source record: 174448

WhoDaMan@webtv.net asked:
> ... are there any federal or Texas state laws prohibiting the monitoring
> of cordless phone frequencies and sharing the information that is heard?

The questions keep coming up, different laws are mentioned, and most replies are of the form "I'll do anything I bloody well please and no law can stop me". The following is a short dissertation on the various laws and their effect.

The laws of the United States, passed by Congress, are codified as the United States Code (USC). It is divided into titles covering various subjects. Title 18 includes the criminal laws and penalties; Title 47 covers telecommunications. A law can be refered to by its original name (i.e. "The Communication Act of 1934") or its entry in the USC. A specific section would be refered to by title/USC/part/section, i.e. 47 USC 605.
To carry out the law, the various government agencies create regulations, which are codified as the Code of Federal Regulations (CFR). It is likewise divided into titles, with the FCC's rules in 47 CFR.

18 USC 119 bars the disclosure of any electronic communications to which you are not a party (with certain legal exceptions), and sets the penalties. 47 USC 605 (the Communications Act of 1934) also bans the disclosure or use of third-party communications. With minor changes, this has been the law for 60 years.

In 1986 Congress passed the Electronic Communications Privacy Act (the ECPA), which added definitions to the law that banned listening to cellular telephones. It also banned the monitoring of broadcast auxiliary, SCA and scrambled signals.

In 1992 Congress passed the Telephone Disclosure and Dispute Resolution Act (TDDRA), which instructed the FCC to ban the manufacture or import of scanners capable of receiving cellular. In accordance with this law, the FCC modified 47 CFR Parts 2 & 15, effective 26 April 1993. Note that this does not affect the sale of such scanners, so long as they were made or imported before the cutoff date. It also does not bar individuals from modifying their receivers.

On 25 Oct 94, the Digital Telephony act was signed. Buried in one of the additional sections was a change to 18 USC 2510 & 2511 that added cordless phones to the original ECPA ban on receiving cellular.

In short:
It is illegal to manufacture or import cellular-capable scanners.
It is illegal to listen to cellular (and cordless) transmissions.
It is illegal to divulge any communication to which you are not a party.

Now, please - we all know the first two are: 1) stupid; 2) unenforceable; and 3) widely ignored. It is not really necessary to post the obvious to the whole world (unless you have an irresistable urge to demonstrate even less sense than the legislators who enacted them).

: > Thanks

Some units that come to mind that can decode CTCSS(PL) are the Uniden
bc-890, the bc-760, and the bc-9000.
also the BC-895 trunktracker.
the Relm HS-200 has it too.
There are others out there.

On the other hand, NO scanner I've heard of can decode DTMF(Touch-Tones).
There are ham units that can, but that's besides the point.

I mention the above, because the other guy who answered you apparently
confused CTCSS with DTMF.

Dearest John,

Please be as rational as you can. Don't get your back up. Just explain this
unanswered challenge from 11/12 (this ought to be creative as hell).

Oh, by the way, today was only 4. Figured it out yet?

==

So, usa.net is a real e-mail? That's an anonymous server. Anyone can get an
address there. If I go get one and post it for you, will you feel better? If
it will, I'll gladly go get one for you.

Why don't take my challenge I posted here? Is it because you can't? I want you
to show me and everyone else here 3 posts by you over the last 2 months where
you have provided anything at all to do with scanning. I've already looked.
There are ZERO. Stop avoiding it.

I don't claim to be the scanner guru here like you do. But you definately are
the lowest source of information in this group by far.

Keep on blowin, wind bag.

George,

Let me be the 1st to congratulate you! Since John as clearly admitted that he has never failed any challenge put to him, (and we all believe him, right?) this is surely going to make him shut up.

However, if it doesn't, what would that make John? A liar? Oh my! That would be completely out of character for him.

Let's just hope John does shut up - per the challenge. Then we won't have to view him as a pathological liar.

Thanks so much for putting up the best challenge we've seen !

John, if you're reading this, I would like to make my own challenge too.

I challenge you to never post anything to alt.radio.scanner and rec.radio.scanner ever again. Even if you intend on posting your normal wealth of knowledge that we all need and crave.

I thank you for never failing a challenge, and accepting these 2 new ones put to you.

Adios, Macaroon!

I had one of these, too. Got it for Christmas. A grey-colored unit with detatchable mike, a long whip antenna, and an orange Morse code key in the lower right portion of the front panel. Received all 23 CB channels plus standard AM radio, transmitted on Channel 14 with 100mW. Actually put out a decent signal...much better than the usual cheap, regenerative walkie-talkies of the time. As I remember, it retailed for $34.95.

There aren't many mods available for the PRO-60. No cell mods available at
all.

What is available can be found at

<http://w5gb.nmsu.edu/kc5kto/handheld.html#pro60>

I have personally doubled the number of channels and that mod is very
handy to have.

After reading through the operating guide of the BC-9000XLT I found a section that says: "Using the Hi-Cut". No place in the guide does it say what Hi-Cut is or does. I have tried to find out from Uniden but they will not return my calls and the call taker is unable to answer my question.

Does anyone know what "Hi-Cut" is and or does????

Again, Uniden Corporation of America fails in aiding the Consumer with product suport. I am really sorry I bought this brand of scanner.

Ok, this is probably the first question ever about the 2026 that does not apply to cellular modification. I find that the keypress beep is kind of loud. Are there any ways to kill it alltogether or add a pot so i can set the volume (Preferred). From what i can tell, the beep goes thru the speaker (If it went to a seperate piezo, for example, I could turn it off, but as it stands I dont know how to do it)

Jr,

The high cut is simply a tone control of sorts, it cuts off
the high frequencies, which reduces hiss. That's all there
is to it.

Happy scanning,

Jon

I use 75 ohm quad-shielded RG-6 from Radio Shack. This cable is MUCH
better for VHF/UHF scanning than most common 50 ohm coax (like RG-58
or RG-8, which weren't specifically designed for VHF/UHF frequencies
like RG-6 was). The quad-shielding makes this cable STUPENDOUS for
use with scanners!

If your thinking about purchasing Wintone software from Richard Smirker, you should read this message - and save your money. If my experience is any indicator, once you send him money, you probably wont get anything in return...read on.

I sent Smirker a $19.00 payment (for Wintone) back on October 20, 1997. The check cleared, however, three months later, I still haven't received the program, nor ANY response from Smerker to my three inquiries asking for information regarding the delay...

In my last (and final) message to Smerker - ten days ago - I informed him my patience was at an end, and requested a confirmation that he would send the product - or refund my money. I also advised him of my intention to make the matter public (in these newsgroups), and to file complaints (as a consumer) with proper officials in his local area, should he continue to ignore his obligations.

That message was also ignored....it seems Smirker has time to deposit the customers checks - but no time to send the product or reply to the customers inquiries/complaints...

If you've ordered Wintone from Smirker in the past and actually gotten the product - congratulations. Times have evidently changed...

This message is posted as a warning to those who may be considering the purchase of Wintone. It will be re posted (frequently), so others can avoid getting ripped off.

John

1-8-98 UPDATE
Appartently, my Buyer Beware warning got Smerkers attention. He posted a (general) apology to the scanner newsgroups, and responded to me (personally) with a registration number for Wintone.
However - he still has not sent the registered copy of the program on disk - as promised on his website...It's now close to FOUR months since I sent my money!

My BUYER BEWARE warning stands.

Well, CHP White mobile freq is 42.72. As someone else stated, you will need an outside antenna for the VHF-Low band if you want to hear anything from the mobiles. BTW I use a CB antenna, and I can hear the mobiles from about 20 miles off, depending on terrain and weather, etc.

I volunteered for emergency communication at Croix Rouge Canadienne
(principal quart).

The cellular phones were working "fairly well" (under no electricity
condition... the commercial guys aren't so stupid to shut down) while
I was on duty so we didn't have to handle too much communications, but
we did for general info such as bridge closing info, highway closing
info etc. which couldn't be obtained through simple cellular phone
calls.

If they didn't have cells, I was sure that we were more busy.

Please help. I am getting cordless on 147.060 with HTX-202, HTX-242
and Pro-26. Pro-2045 receives a little bit, but not much.

Should I complain about this to my neighbour ? Should she stop
using it ?

It's getting crazy when I scan for the repeater and suddenly I stop
for cordless which I am not interested in listening to.

Laura, I had an idea for emergency comms. Since many computers generate
RFI, M@S@ could switch his on and off in order to generate a new mode
using morse code. It will be called Interrupted Continuous Wave
Computer Generated Radio Frequency Interference (ICWCGRFI for short).
Anyone within 20 feet should be able to copy.
If only the computer manufacturers would have given us a key jack
instead an on-off switch.

check out a hobby store, for the latest railfan timetables, there printed by altamount press.obtain the ones you need for your trip. some of the info in these Railfan Timetables include the following.

1.Primary road frequencies
2.switching frequencies
3.dispatcher control links or repeater frequencies
4.PBX or mobile telephone frequencies
5.dipatchers call sign or name
6.maximum authorized speed for the subdivision
7.scheduled passenger trains utilizing the line
plus other useful information. Most better equipped hobby shops will have the latest railfan timetables. good luck

While having the 225-400mhz is a necessity, a receiver must also be capable of receiving the 138-144 portion of the spectrum in AM.All of the handhelds I have had always received this in NFM unless it had a switch to change mode.But I have not bought a new handneld for a year or so so they might have changed all that.

1100. Question about 900 Mhz cordless freqs

Newsgroup: rec.radio.scanner
Date: 1998-01-10 00:00:00 UTC
From: scatmanpoo@aol.com
Message-ID: <19980110022700.VAA15934@ladder01.news.aol.com>
Source record: 174333

I know this question probably has been asked and answered many times, but here it is again.

Are all of the cordless freqs in the 900 band digital freqs, or are some of them analog? If some are analog, are they dedicated freqs like in the 46 Mhz band, or is there a range of freqs open for usage? I guess my main question is what are the analog cordless freqs in the 900 mhz band? Are there any analog cordless freqs in the 800 mhz band?

Thx in advance. ScatManPoo@aol.com

Sure do. Haven't seen an ad for them in a while so
not sure if they are still solvent or not. Think
there was another one called US Radio or some such?
They MIGHT still be in business.

> are there any discount mail order radio shack dealers
> around any more.

I do business with Pioneer Data in Oregon.
Try 1-800-930-5115. Terry typically runs
a monthly ad in Monitoring Times.

Good luck!

>trunktrackers on the market trunk-tracks in the 900 MHz range at this time.

Actually, the Pro-90 _does_ come with a charger. But it's a standard "wall wart" device that plugs into the wall and the scanner, not the "charging cradle" that the Bearcat variant is supposed to use. Otherwise correct.

Had there been some local source for the Unidens I may have chosen differently, but I prefer to buy locally, even if it's a slightly less attractive package. In my own experience, it's been worth the reduced amount of trouble if something goes wrong. Your milage may vary.

press and hold 2-9-lockout while its off then it on,this loads test freqsn
it takes three hands usually but it works..
a few channels will have in band frequencies in memory and you just
scan up and down from them and write to memory both band edges with
either split in adjacent channels to scan up and down from
keypad entry will not work but who cares.k

I dont know, but I have been scanning the 27.500 USB to 28.000 USB
range and have found a funny sounding mode of transmission between
military craft there. It happens regularly and a beep preceeds the
transmission. Then youll hear more very strange thumping sounds after
the beep which must be used to indicate to the reciever that the
transmission is about to begin.
The mode must be something digital since nothing analog makes this
kind of narrow range of weird sounds.
If you know what is going on here, please drop me a note!

The Pro-2041 at 179.95 is probably the buy of the century. The worst
thing that I can say about it is that it has too many birdie
frequencies. The best thing is that you can upload frequencies
to it from a PC via an easily built cable that plugs into the
scanner's ext. speaker jack. No modification of the scanner itself
is necessary.

As far as I know there are NO state laws in Ohio regulating scanners
whatsoever. I have had scanners around police many a time. All they
ever say to me are questions regarding the hobby. Some have even asked
me for frequrncies.

Of course, local ordinances could regulate scanners if your locality so
wishes.

>is what are the analog cordless freqs in the 900 mhz band? Are there any
>analog cordless freqs in the 800 mhz band?

Cordless pfone frequencies are either in the old 46/49 MHz band or the
902-928 MHz band.

As far as the 900s go... They can either be analog, digital, or DSS.
There is no specific frequencies in this band reserver for specific
modes. It all depends on the model of phone used. Someones analog Brand
A phone could use the same frequencies as another manufacturers Brand B
digital phone.
There are no set specific channles in the 900 cordless freqs

Yes it does scan slow. As far as computer control, Scancat Gold for
Windows will clone freq's into and from my R10. As far as alpha tags
go they are only visible when you are moving through the channels with
the rotary knob. I use this receiver for monitoring a specific freq
or for scanning less used freq. It is a high quality radio and it has
lots of uses, but I use my BC3000 xlt for scanning all the local
fire and police freq's because of it's speed and their high amount of
traffic. The R-10 is not the end all radio for scanning but it is a
great supplement that you can store 1000 freq's in and alpha tag them
so you can find what you want quickly and I love it for this use. With
computer control you can keep as many freq's in your memory and set
the R-10 up in a snap for whatever use you may have for it.

Well, instead of a squelch tail at the end of each transmission, you
hear the radio say 'eh?' :-)

Seriously, there is not much difference at all. Radio Shack and Uniden
products are the same models as sold in the US. (There aren't enough
buyers up here to warrant making a model just for the Canadian market,
so we get US goods.)

There are some minority brands and ham equipment available mostly thru
ham radio equipment vendors which are not cell-blocked, since cellular
monitoring is still legal up here. Some vendors on the web include
Norham Radio, Atlantic Ham Radio, and Durham Ham Radio (this is not a
testimonial for any of them, just intended to give you a place to
start if you want more information). Try Ron Katz' web site for links
to some of these - http://www.interlog.com/~ronkatz

For Sale:

AOR AR 8000 wide range receiver
(This is the cell capable model)
- Receives .1 - 1900 Mhz.
- 1000 channels, 20 banks.
- Tons of other features.
- Has sputtering squelch mod done.
- Has slight wear on keys and by the tuning knob.
- Unit works great.
- Manual included.

Optoelectronics OptoLinx (this is 3 months old)
- Works and looks like new.
- Allows computer control of AR 8000.
- All cables included.

PRICE for both: $700 or best offer.
(Money order only, no checks, please)

Reason for selling: I have too many radios already, and I just bought a PRO-2006.

<<Do not go to this site unless your a conservative!>>

Why is it that ranting neo-fascist militia types are such poor spellers and grammarians? I guess when you're always out playing paintball SAS to train your Calvin Coolidge-like rock hard body into a lean, mean commie-fightin' machine, there ain't much time left over fer ed-yew-kashun. Hmmmm.....maybe that's why Republicans traditionally UNDERfund education, while they OVERfund defense.

Say, where ARE all those Communists you guys were going to be fighting in the Sierra Nevadas if we didn't nuke Hanoi? The liberal media must be covering the whole thing up...

Where is John Birch now that we REALLY need him?

Republicans: Today Congress, tomorrow the nursing home...

Jesse Helms: A man you can depend on, or a man WITH Depends on?

Strom Thurmond: Old enough to die, young enough to filibuster.

From: "John A. Pilger" <pilger@gte.net>
Message-ID: <698ftr$q6$1@gte1.gte.net>
Source record: 174496

for ems med channel assignments, listen to 462.975. Private ambulance (like Medix, AMR, etc) will dispatch on their own company channels and fire units, including paramedics are dipatched on the various trunked systems.

Norm wrote in message <695gvc$t71@news.aero.org>...

The Columbus Frequency Index has added a page where you can submit your radio or scanning related WebPages. It is put in a searchable index, available to anyone on the web. Kind of like an Infoseek or AltaVista of the scanner community (only not quite as advanced--sorry). So please enter your site at http://cfi.simplenet.com/category.hts. Once it is submitted, it is available for immediate searching.

Thanks,

--Sonny

>Any help would be appreciate.

Kick your scanner into search mode between 450-451 MHZ and 455-456 MHZ.

In the 450-451 range, you'll most likely catch the output of the hilltop repeaters which rebroadcast the copters/planes transmission. In the case of the 455-456 frequency, if within range, you'll hear the signal directly from the aircraft... or signals transmitted without the use of repeaters.

On some of these frequencies, you may also hit upon TV station IFBs (back-cue signals) and wideband remote transmissions)

1169. One antenna - three scanners...

Newsgroup: rec.radio.scanner
Date: 1998-01-10 00:00:00 UTC
From: John <#629371@att.net>
Message-ID: <698lk9$8k1@bgtnsc01.worldnet.att.net>
Source record: 174502
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Need some advice -

I have three scanners, and would like to hook them all up to a scantenna antenna on the roof.

All three scanners are in different locations in the house, so I would need three cables coming from the antenna to the three different locations - each run would be about 30' long.

I assume I would need a signal amplifier of some sort, and a splitter (three way)...and then just run the cables to the scanners, right? Or is that "over simplified" a bit?

Any help is appreciated - radio shack doesn't seem to have the amp (for outdoor use) and splitter that I need...plus it's rather hard to find someone at RS that understands what I'm trying to do...at least at the stores closeest to me...

Thanks.

John

1173. Re: CHP frequencies

Newsgroup: rec.radio.scanner
Date: 1998-01-10 00:00:00 UTC
From: Tork <tork@cts.com>
Message-ID: <01bd1e08$72f56b60$b99fd8cc@davetork>
Source record: 174506

You need to get an outside antenna. The CHP is in 42.mhz which is
low VHF. So you need a long outside antenna. If you are trying to
use a handheld rubber duck, you just won't get much unless they are
right around the corner.

Hope this helps.

I've heard stuff like that too, on several freqs. If you use 12.5kHz steps, you might hear some Russian stuff in the 265-270 range.

I used to hear a French chick occasionally. Seemed like she must have had an unusual cordless phone that used a handset to base freq in the 290MHz range, because only her side of what sounded like a full-duplex, personal telephone circuit was heard. Seemed like she might have been in France/Europe, based on the usual times I'd hear her (08 - 1100Z).

I think all of the above are examples of terrestrial-comms using the 270-320MHz range (or throwing strong enough harmonics there) & being accidently rebroadcast out over *someone's* satellites.

In the case of the Russian comms (which based on universal traits like inflection & laughing, seemed to be personal traffic), whatever satellite they were using was putting out a beam that covered all of the continental US.

> I dont know, but I have been scanning the 27.500 USB to 28.000 USB
> range and have found a funny sounding mode of transmission between
> military craft there.

What "military craft" are you hearing, & on what freqs?

> It happens regularly and a beep preceeds the
> transmission. Then youll hear more very strange thumping sounds after
> the beep which must be used to indicate to the reciever that the
> transmission is about to begin.

Are you sure it isn't someone banging on your door, telling you to turn that damned noise down? That used to happen to me...

> The mode must be something digital since nothing analog makes this
> kind of narrow range of weird sounds.

I live in downtown Detroit, and I can tell you without a doubt that there are many, MANY thumping sounds, beeps, and other strange analog noises & alien speech patterns communicating in the 27-28MHz spectrum!

Chad,

Check out these web pages for some frequencies published by other helpful
folks:

http://w5gb.nmsu.edu/kc5kto/localfrqs/california/sfnews.frq
http://pages.prodigy.net/hounddog/media.html

As Reverend Tweek pointed out, scan between 450-451 and 455-456 during rush
hour and you'll pick up lots of traffic reports. I can't say as I've
heard TV station helicopters specifically, but I've definitely heard traffic
reports for radio stations like KGO, KCBS, and some local FM radio stations.
It's interesting to listen to the radio simultaneously to see how they time
everything.

Why would you do mod?? Just search the 360-385Mhzrange in NFM mode. (it
defaults to AM in this freq band)
You have to change to FM mode. ENJOY!!

Contact Stridsberg Engineering, Inc., PO Box 5040,
Shreveport, LA 71135-5040, telephone (318)861-0660.
They manufacture both passive and active receiver
multicouplers ("splitters") in several configurations.

The active model contains a low gain amplifier to overcome
the normal loss associated with splitting the signal,
though mine produces some FM-broadcast intermod in the VHF-high band.

I actually get really good CHP reception while in my car using only the rubber antenna on my Pro-60. Base stations come in pretty good, although hearing mobiles are out.

I actually get the Ventura CHP office *too* well, to the point that it's annoying. I can't stand the afternoon dispatcher's voice.

Motorola ASTRO Saber III For Sale

This is a Motorola ASTRO Saber III (UHF 440-512 Mhz). I bought this radio about 2 months ago for some ASTRO digital testing, but no longer need it.

The radio is in excellent condition physically and electronically. It features the following:

UHF Band Split 450-520 (Will actually do 410-520)
255 Channels (16 zones with 16 talkgroups)
Analog Modulation / ASTRO Digital Modulation
Motorola MDC-1200 Systems
PL/DPL/Repeater Access Tones
14x2 Alpha Display - Completely programmable
Full Keypad
Stubby Antenna
Good Battery
Too many other features to list....this radio will do about anything (except wash you car.)

I am asking $1100.00

If interested, email me at lblant1@airmail.net or call me at home: (972) 831-1833.

Thanks! - Lindsay Blanton

There was a piece on the local CBC radio outlet on Friday, and I thought also on the six oclock local CBC tv news (I might be mistaken about the latter, since I was "watching" CBC tv via an FM BCB radio) about hams providing communication, here in Montreal and in Quebec City.

This has been the worst emergency that I can think of here, and I've lived here all my 38 years. There were some snow storms in '71 and '72, but I don't remember them being as bad. It's an odd situation, because the weather hasn't been all that bad. It's been warm, and I had no problems walking around, though some areas probably are worse. But it has done tremendous damage to the power lines and the trees. Last night, was the worst of the environmental situation that I've seen; it was way too icy to get anywhere. I slipped at the bottom of the path, and came right back in.

It has stretched out quite a bit, and the problems tend to compound on others, though there have been few injuries.

There have been reports that in some areas the cellphones are failing, because their batteries are dying. Yesterday, they were reporting that something like 40,000 phones were not working, and though I can't remember the details, I thought it was so mething more than broken wires.

People can't buy things because the stores are closed, or as the week wore on, no cash. Today, when I was in a grocery store, they were having problems dealing with bank cards.

There was very little preparation, which probably is the key to emergeny preparation. Until it happens to you, it is too abstract to think through the details, and all the lists of things to have on hand and be prepared

can always be put off till tomorrow.

My power was off for only 24 hours, and that at the end of a week of power problems elsewhere in the city. As long as the security of the power was there, it was easy to wait till later to get some batteries and food that you can eat without heat.

I'll not have the problem again, though there may never again be a problem. I'm going to get that 12V gelcell battery that I've been planning to get, just in case, to be able to power a radio and some small bulbs, which would be definitely better than AA cells and a flashlight that wasn't working all that well.

This doesn't really answer the question about hams, because I don't know the situation. I realize in this situation how nice it would have been to have a 2m rig. I think generally, more people are aware of the need for backup power, and yes, if hams don't have backup power the communications gear means nothing.

Because ... a virtual downconverter modification improves
the sensitivity by enabling the 800 MHz front end filter
instead of the military air band filter.

See 1996 Monitoring Times magazine.

she changes the channels, but then she appears in different repeater
freq (2m repeaters are packed in and around montreal area).
what can I do ?? ;-)

According to the FCC database at
http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts they've
been licensed in the PP (police) Radio Service on 45.42 since July of 1984,
renewed in 1994 to expire in 1999.
They have a couple of 800 band frequencies also listed:
867.2500
868.4375
866.0125
866.5125
867.0125
867.5125
868.0125
These are on the "GF" service, Conventional Public Safety National Plan,
callsign is WNNM900

that's why CW is useless. (?)
I have the internet access in my place and I don't have any problems
with connecting it at this moment.

anyhow, no one is using CW to pass the information out for emergency
purposes at this time... in my area. So please don't talk bout CW
for emergency purposes anymore. This crisis proved that CW would not
be a good mode nor way in emergency situation. Moreover, Pro-CWers
on HF aren't active for helping the people out. Well, they don't
have VHF rigs (which are mainly used for emergency purposes) so they
can't do anything about it.

You may be receiving the cordless phone as a mixing product of other
radio equipent in use slose by, either your own or that of neighbors.

Several years ago I once got a phone call telling me that I was
transmitting on a 170? mhz forestry frequency (I don't remember the
exact frequencies) while I was working 2meter FM. Monitoring that
frequency at my QTH revealed no hint of RF being radiated on that
frequency. The caller was a very experienced radio technician
(non-ham), and while talking to him about the source, I learned that he
was running 2 scanners in his house at the same time, and and could hear
me on the 170? mhz freq on either scanner. Spending a few minutes with a
calculator, I found that his scanner IF frequenies were mixing with my 2
meter freq and producing the signal he was hearing on 170? mHz. I
called him back and asked him to turn off one scanner and listen again,
and when he did *nothing* was heard of my signal on 174 mHz.
These things do happen. Try turning off any radio/tv/electronic
eqiupment under your control, while the cordless phone is working to see
if the cordless signal disappears.
I wouldn't complain to the neighbor under any circumstance, he/she
would not understand and you would likely be suspected of deliberatley
monitoring their phone calls.
If nothing else works, you will have to lock out the offending channel
on your scanner.

FWIW the RF oscillators in these devices tend to work on harmonics - eg my 49 Mhz RS baby monitor uses a crystal for roughly 14 Mhz driving the RF amp on the 3rd harmonic. The cheap bandpass filters on the phone might not suppress all the unwanted emissions.

Somewhere on the botttom of her device will be a sticker stating the FCC type approval for the equipment, which probably reads "the use of this device must not create interference for anyone else" or words to that effect - so it truly is her problem. I bet if you tell her you can hear her, she'll buy a new phone quick :)

I found a website where you could basically listen to any D.C. frequency. You could click on a box to listen to Amateur Radio or WX and Airport, or you could put in your own frequency and the type (FM Wide, FM Narrow, AM, or SSB (USB)). The website for the scanner is http://speed.nimh.nih.gov/listener/ralistener.html and you could find police, fire, etc. frequencies at http://www.li.net/~j4dice/links.html#DC or http://www.li.net/~j4dice/links.html and click on the Washington D.C. link. Source record: 174151

Yes,
I found a portable computer case that was meant for a "book" type computer rather than the slimline pc's. This bag has about 4" of depth to it, but has about the same length & width as the 895xlt. The scanner fits in perfectly and is well protected. Since the top zips open, I can usually just hook up my cables (power and antenna) and leave the scanner in the case while I am mobile. Look around at stores or computer places that you would find portable computer bags, hopefully you will be lucky enough to come across one as well!

If the neighbor gets too nasty, I would complain to Industrie Canada that her consumer equipment is interfering with licensed amateur radio operators. I don't know if I.C. would respond in any similar fashion to the FCC, but it might help. Also, CRRL should be able to provide you with material on dealing with RFI.

I wa monitioring L.A.P.D. Tac 8 Emergency trigger with my Astro on News Years Day 00:10hrs when I heard,OFFICER NEEDS HELP!!!Then I heard "Unit with a message do you have a message""get the rover no."Then there was no traffic from that officer.I find out that day on New Years that the LAPD officer who broadcasted that message was shot in the head and killed by a gang member while part of a task force to stop any New Years gun fire.
Killed by a gang member while braking up a Gang party.I know one thing and that is that fine officers like that officer who was killed while in the line of duty
put there safety and life in danger just to make the streets of LA. and other streets in the US.safe.citizens always critize the police about that police is the BAD GUYS but I think they are people like anyone else.Next time you see a officer in the neiborhood,shake his hand and tell him he is doing a good job.After all,they are getting killed protecting our lives and making sure
we are all safe.

my two cents.

The best and cheapest solution for low-band reception is to get a 102" steel CB antenna and cut it down to resonance on 39Mhz, 42Mhz, or whatever, As an added bonus, this will also work GREAT for those "personal use" 46/49Mhz frequencies :-)

Hello, all,

Sorry if I'm repeating a discussion that has already come and gone. I'm looking to buy a digital cordless phone after my neighbor told me that she heard my phone conversation the other night (I was on my old Sony cordless). I'm looking at buying something that will give me caller ID, security and good quality. Went to Future Shop the other day, and the sales guy really pitched V-Tech. Don't know anything about this V-Tech. There were only a few digital spread spectrum phones, but they were sort of outrageously priced. What do you all suggest? I have heard Unidens are awful, and that's about it. Any help would be appreciated.

Thank you.

Source record: 174173

The 39mhz freqs are in use in San Deigo and now in San Bernardino. They are great because they are simplex and you can hear both base and car. Example, I live in Southwest Riverside County and I hear East County in San Diego on 39.40mhz perfectly with rubber ducky, thats both mobile and base comms. In San Diego the following Freqs in 39mhz are in use, 39.40, 39.60, 39.80. 39.80 also comes thru Southwest Riverside County up to Corona, to the west and Moreno Valley to the east.
Hope this helps out.
Ron

>Valley to the east.

I read somewhere -- don't remember where -- that the CHP was going to start
using repeaters after acquiring the 39 MHz frequencies. Maybe the 39Mhz
frequencies are the repeater outputs and that is why you can hear the mobiles?

Just a thought.

All I can say is wow! In the past week, almost 4000 people have downloaded PC895 from our Website! I would like to say thanks to everyone who has expressed interest in this program and to all of those people who have sent us bug reports, wishes, suggestions, and the like. It is very much appreciated!

From your suggestions and wishes, future versions will include :
* Improved database support
* Import and Export of Databases
* Customizable reports from databases
* Customizable controls
* And many, many more features!

In closing, I would just like to add that this program would not be a success without all of the people in this newsgroup (since this is the only place we are advertising right now)!

Thank you for your support and interest!

It is technically a felony, under federal law, to listen to cordless phone conversations....could get hefty fines and/or prison time.

OTOH, there's really no practical way "Big Brother" can tell who you're listening to...the only time people get into hot water is when they open their big mouths about something they've heard.

So..don't do it; and if you do, keep it to yourself...ESPECIALLY don't tell the person you've been listening to.

Gosh, Cutie Pie, can't you figure anything out?

1. Have her remain on a single channel

2. Delete that repeater from your scanner

3. Be happy there *is* a workable solution that is so easy.
If you talk nice you may get to select which repeater you want
to delete.

Hi

I wanted to read at least one, other, return message before I offered my advice.

As you are aware of, there are many new services, coming to the radio specturm, which are of such low power that they can run unlicenced. Cb walkie-talkies below 100 mw are one of them, cordless phones are another.

To some extend even though the problem is generated by the cordless phone, I am assuming you are using well designed equipment, the solution is altimately in your court.

If you want ot approach your neighbour, he/she probably won't understand what your are taliking about. To them their cordless phone is simply a phone without the cord. Most of the cordless phone users don't understand rf interference.

If you should decide to visit them, might I suggest you simply look at the phone to see if they have done anything out of the usual to it. Most cordless phone users have not attached amplifiers so you can, in all likelyhood, illiminate that thought.

You could consider putting in some kind of bandpass filter on your radio.

If the problem is bothersome enough, for you, consider the following as a possibility. Find a cordless phone which does not interfere with your radios. Then before you buy it investigate your problem with the neighbour. Then ask if they would be willing to swap another one with their's. You then buy the other one and take the interfering one and keep it for your own use.

The problem here is 'is the problem worth the possibility of creating a neighbour feud'. I honestly don't it is worth it.' I would rather buy my neighbour a cordless phone that doesn't cause interference, with me, that the alternative.

p.s. consider buying her one of the 900 mhz units.

We are proud to announce the availability of << Pro Data >> Version 1.6 for Windows 95.

The most sophisticated and powerful Frequency Database Manager ever developed.

Please visit our web site at http://home1.gte.net/prodata1/index.htm
and view the screen shots before downloading the 30 day demo.

Summary of Features:

26 fields of information
Order of fields is customizable
Grid view window for easy display.
Record view window for easy data entry.
Import from Percon, ScanWare, APF, and UFDBF database files.
Export to APF, and UFDBF database text files.
Querys the database returning records meeting user criteria with unlimited possibilities.
Find and Replace data in any field.
Several types of code viewable/editable windows
Change the capitalization of data in any field
Reports - Prints to a file or printer the opened database or query.

1261. FS: Motorola Portables

Hello everyone,

I have the following late model Motorola Portables for sale. They are both clean and in excellent condition with battery and antenna. I have had lots of interest in the ASTRO...but no one wants to commit to the radio ;-(

Motorola ASTRO Saber III Portable (UHF)

UHF Band Split 440-520 (Will actually do 410-520)
255 Channels (16 zones with 16 talkgroups)
Analog Modulation / ASTRO Digital Modulation
Motorola MDC-1200 Systems
PL/DPL/Repeater Access Tones
14x2 Alpha Display - Completely programmable
Full Keypad
Stubby Antenna
Good Battery
See http://web2.airmail.net/lblant1/astrofs.htm for a picture and additional info
Price : $1100.00

Motorola Saber Si 800 mhz

This radio looks exactly like an ASTRO Saber III
800 Mhz - Full keypad and 14x2 display
255 Channels (16 zones with 16 talkgroups)
Supports Type I/II/IIi Trunking and conventional
Multi-system Scan
Call Alert, Page, MDC, Phone etc
Good Battery
Regular Motorola 800 Antenna.
Aftermarket Fast Charger Included ($85.00 value)
Price - $950.00

Thanks! - Lindsay Blanton
Please reply to: lblant1@airmail.net

Absolutely! I'd march my right over there and demand she stop using her phone immediatly. Tell her you will be forced to call the RCMP's if you hear her voice again interrupting your most important scanning activities. Let her know your a radio amateur and that your just too stupid to figure out a solution to the problem so she'll have to stop using the phone. After her boyfriend knocks your stupid ass through the wall, you can crawl back to your room and call for help using your HT. OK?

Tim

I own three Uniden phones. All 900 Mhz phones. My best all around is the EXP-9100 spread spectrum although the battery life is horrible. The 2nd is the EXI-960 digital with caller ID on portable. The battery life is very good, but the range leaves a little to be disired compared to my spread spectrum. The 3rd is the EXP-900 analog phone which has speech inversion. The best thing I like about this phone is the metal hydride battery and the headset capability which I use everyday. The range is also close to the EXI-960. Good luck, Kenneth.

YUO CAN LISTEN TO WWW.POLICESCANNER.COM
BUT FIRST, I BELIEVE, THAT YOU NEED TO DOWNLOAD REALPLAYER
THE REGULAR VERSION OF REALPLAYER IS FREE BUT IF YOU WANT THE PLUS
VERSION THAT YOU HAVE TO PAY.
VISIT THE REALPLAYER HOME PAGE FOR DETAILS.

ALSO ONCE YOU DOWNLOAD REALPLAYER YOU CAN TRY THE AUDIONET HOME PAGE.
THERE YOUY WILL FIND A TRUCKLOAD OF RADIO STATIONS TO LISTEN TO FROM ALL
OVER THE COUNTRY.

THEY ALSO HAVE A TV STATION THAT YOU CAN WATCH AT CERTAIN TIMES

ON THE OTHER ON IF YOU WANT TO LISTEN TO TWO DIFFERENT CLEVELAND OHIO
RADIO STATIONS; YOU WOULD HAVE TO DOWNLOAD AUDIOACTIVE.

THEN YOU WILL BE ABLE TO LISTEN TO 105.7 F.M. ---- AN OLDIES STATION

AND
WCLV 95.5 F.M. ---- A CLASSICAL MUSIC STATION.

I HOPE THAT THIS WILL HELP YOU

HAVE FUN ON THE NET
--
"THE VISTULA RIVER IS FLOWING.

What is the Sacramento Valley Scanning Guide? I am very interested!
Give me some time to type up the list out of Police Call. It only has Sac County and it says to use the Alameda County List. Do you still wish them?
I still want to know what the Scanning Guide is however. Thanks a lot!

That's a good question.
I first offered a perfect PRO-2022 for $200 shipped.
Then I dropped it to $175 shipped. Still no response.
It's now at $150 shipped. Box, owner's manual, antenna.
I dunno, we'll see.

You might check out the PROgramit. It does only allow the channels to be
programmed from databases on the computer. I think that it is well worth it and
would make reprogramming the scanner for different monitoring a snap.

1275. Question about ICOM IC-R10 "real time band scope"

Newsgroup: rec.radio.scanner
Date: 1998-01-11 00:00:00 UTC
From: Adam Lane <alane@thegrid.net>
Message-ID: <69cdii$5v0$1@zinger.callamer.com>
Source record: 174208

Can an owner of an ICOM IC-R10 handheld scanner please answer this:

One of its features is a "real time" band scope, using the
LCD dot matrix.

I've never seen this feature at work. Does it help identify
whether or not you are listening to an "image" frequency?
Anyone have enough experience with it to call this a useful feature?

1276. FS: Unblocked Opto Xplorer

Unblocked Optoelectronics Xplorer for sale. It is in Mint condition. I've captured the elusive freqs that I wanted at the local mall, so now I'm ready to pass it on to a new "explorer". 7 months old. Full 800 MHz.

Comes with all original accessories- Xplorer, Zipper case, Telescoping Antenna, Computer Cable, Software, Manual plus a few extras: Stubby duck antenna for covert operations, Spectrum FCC Database CD and I'll pay shipping USPS COD Priority Mail with insurance.

I'm asking $850. Or best reasonable offer. No Trades

From: Jon Van Allen <yonnie@worldnet.att.net>
Message-ID: <699425$mhv@bgtnsc02.worldnet.att.net>
Source record: 174301

I picked up an absolute mint ACT-R-106 10 channel crystal scanner that has never been used, still in the box. I crystalled it up, set the VHF/UHF jumper wires and it plays great. (no delay tho, dang it)

Does anyone remember this scanner or still use one? It's even older than my Pro-53 8 channel crystal scanner, the manual has a date code of 11-82, but I'd guess it's mid to late 70's.

Interesting old scanner, it's like finding a "brand new" 20 year old car that someone put away and forgot about.

Cheers,

Jon

I have a 1979-vintage ACT-R-106 and used it mobile long ago.
It now sits quietly in the Regency section of my scanner museum.
I sped up the scan rate, though I long since forgot which R or C
I changed in the scan oscillator.

There were at least two circuit versions of the ACT-R-106.
Schematics and alignment data for both appear in Sams volume SD15.

I bought one new in late 1973 or early 1974. I used it daily until I replaced it with a PRO-2004. The old Regency is still in use at my mom's house, but will probably be retired when the county completes its move to 800mHz. Thanks for bringing back memories of a scanner that logged a lot of miles in my old 73 Pinto.

The train actually leaves from Emeryville (well, probably from the Oakland yards, but passengers get on in Emeryville). This changed when they added more cars and the train became too long for the new Oakland station.

Oakland/Jack London Square and San Francisco passengers are transported to Emeryville by bus.

And the thing which pisses you off, is that you can only hear one
side of the conversation. ;-)

147.06 / 3 = 49.02

49.02 is the handset frequency of a cordless telephone pair.

Looks like a harmonic rather than an IF image, which puts the problem
in her ball court.

>Should I complain about this to my neighbour ? Should she stop
>using it ?

You can request your neighbor to avoid that channel... since she
obviously has one of the 25 channel phones which can change channels.

> planet! Good luck and be prepared.

Yes it does seem that radio shack seems to clueless about this mysterious computer interface, I have a pro-64 and it only has a one or two sentence blurb on the computer interface and it basically says contact your local radio shack. However the computer interface can be made very easily with an DB-9 plug and a 1/8" stereo cable. I cut off the cable of an old mouse and used an old set of head phones. Here's the layout.

Mini Plug DB-9
--------- -----
TIP Pin 2
Ring Pin 3
Base Pin 5

This is for the pro-64/2041. However I must say I was some what disappointed to find out that the only thing you can do with a pro-64 and a computer is upload freq's from the computer to the 64. I don't know about the 2041 but I heard it's a 64 with a bigger box. Have fun.

Two good sources are "The ARRL Handbook For Radio Amateurs" and "The
ARRL Antenna Handbook." However, there must be literally thousands of
good sources for this kind of information. Look around on the Web and
you'll probably find some software that will do most of the design for
you.

You have seen these superstars on TV and the movies. Their influence
in Hollywood is legendary. John Travolta has endorsed the works of
Church of Scientology Founder, L. Ron Hubbard. Kristie Alley is
the spokesperson for the Church of Scientology Narconon Program.
http://www.narconon.org/Kristie.htm
Tom Cruise credits his overcoming Dyslexia to Church of Scientology
auditing. Lisa Marie Presley is also a member of the Church of Scientology
and financially-sponsers her own Auditing Organization in Memphis, TN. Lisa
is also financially sponsoring the defense of the Church of Scientology
against the family of another Lisa. Lisa McPherson who died in 1995 in
Clearwater, FL.

Lisa McPherson died December 1995 at the Ft. Harrison Hotel while
being held captive by Scientology Staff. During her 17 day ordeal
she was denied food, water and proper medical care. Lisa McPherson
died during here captivity. You can read her autopsy report at
http://www.primenet.com/~cultxpt/lisa.htm

Why do Hollywood's celebrities support a Church that takes up to $360,00
from it's members, feeds members lie after lie and why did L.Ron Hubbard
establish a penal system in Scientology called Rehabilitation Project
Force? Why do they support a Church that uses the law to harass critics
and sue them into silence?

Another question to ask the stars, Is the Church of Scientology treatment
of you as King or Queen the reason you are so silent about the human
rights abuses of people in your Church?

Anonymous

The reason that I am posting this anonymously is because I do not want to
be harassed by Scientology Staff, Lawyers and Private Investigators.
What kind of Church engages in such activities?

Other useful URL's about Scientology or Lisa McPherson.

Bob's advice is sound. Another possibility comes to mind, though I have not tried it myself to give the thumbs up (or down). Ten-Tec sells a broadband rf amplifier:
"Universal Low-Noise Broadband DC to 1 GHz RF Preamp

You KNOW that every kit company sells some sort of .broadband preamp for all purposes. If
you want to try a broadband, untuned RF preamp on any receiver or scanner or other
instrument, THIS one is your best buy! Excellent noise figure, gain and frequency coverage at a
BUDGET PRICE. Up to 18.5 dB gain at 100 MHz. 17 dB gain typical at 500 MHz. Supply
voltage: 8-14 VDC.

T-KIT No. 1001, $9.00" {direct copy from their page, hope I don't offend the copyright cops or Ten-Tec}
The Ten-Tec url is: http://www.tentec.com/tkits.htm

You could use this as the heart of a distribution system. Place it as close to the antenna as possible with one input and 3 outputs. Use a metal enclosure and bulkhead mount rf-connectors (S0-239 or BNC). Run a 12V line to it and you could well be in business. I do stress that I have not done this and am not certain of the results. It does seem to be economically viable and you could have fun building it.

How about it out there? Anyone ever use this gizmo and have any comments on how it performs?

Good Luck,
Howard

Recently I read some bad reports about Wintone in the newgroups. For me, I have found the program to do what it says it will and the support has been excellent. I have had several questions answered by the author of the program in a very timely manner. The price, what can I say, for 20 bucks you get a lot of bang. I feel like I should be paying a lot more for the program. I think the author has done us a great service.

I am looking for an inexpensive (but fast) scanner, but want cell coverage (till the novelty wears off I guess)

Thinking about a pro 60 from Javation.

Does it do cell for USA at correct spacing? Can steps be changed?

what about steps in 44- 49 mhz range?

Anyplace cheaper than Javation? (currently $257 US)

available in Canada?

Thanks

It's because the ASTRO won't do GEstar unit ID and LASO won't allow any one on their dispatch, L-tac, A-tac, or C-tac frequencies unless they are assigned an ID. The federal narco folks had to have the GEstar ID mod done to their Spectra radios before LASO would allow them on the system.
The Mutual Aid and Access frequencies are different though.

Well, not quite true.Now understand that BOTH of my 2026s were of the jumper type so I do not personally OWN one of the type that you describe. However, one of my good friends does and there IS a (would your believe this) a KEYPAD mod that will enable your unit to do this.

The downside is that evertime you want to listen you have to preform the mod-ALSO I don't have the kepress operations-at one time someone posted them in this NG so perhaps they will post them again for you. If not I will check around and see if my buddy still has them.

Metro Traffic is on the above lists and is the best one to listen to. There
is lots of traffic during the commute times and they service many stations.
Lots of chatter between the helicopters, too.

I still find it hard to imagine how they can afford to keep so many helicopters
in the air. Must cost a fortune.

I saved this from someone else's old response:

The Staten Island Ferry uses the VHF marine radio for it's
communications.
Channel 19 156.950 Mhz is the "house" frequency. Bases are
St. George in
S.I.
& Whitehall in Manhatten. The boats are usually called up on
channel 13
156.650 Mhz or 16 156.800 Mhz and asked to "go to house".
Ferries are
called by name ie. Barbari, Lehman, Kennedy, Legion, etc.. I
also have a
frequency in my files of 158.730 Mhz for terminal operations
but have
never tried to monitor it. Happy listening!

Here's an idea.

I was reading lately on the great interest in
TrunkTracking scanners and software that allow computer
controlled scanners to follow calls with a simple to
build interface. I have heard that there are at least
2 or 3 software programs out there that do this.

The software is decoding the digital data signal via
the simple to build interface using the information
found on the net regarding the Trunking protocol.
My question is why don't someone write software
to follow cell calls. You could use the same interface
but change the software to decode the cell data channels
using the cellular protocol. I believe the digital data
cellular protocol is public domain information. I remember
reading it somewhere about a year ago. The software would
send the correct frequency instructions to the scanner
after decoding.

This program could only be used by FCC approved users
but a programmer could make some money by selling such
a software package.

What do you think?

The correct model # for the UHF Spectra is D44KXAJA5BK. Marty

1318. Proof of Bill Cheeks Mensa Membership

Newsgroup: rec.radio.scanner
Date: 1998-01-12 00:00:00 UTC
From: Richard Kendrick <wa7twi@primenet.com>
Message-ID: <34BABF83.616439F1@primenet.com>
Source record: 174092
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have been able to verify that Bill Cheek did indeed once belong to American Mensa, as he claimed. In the 1983/1984 Directory of American Mensa Membership, there is a listing for William David Cheek, 235 Pike Street, Golden, CO 80401, (303) 279-1447. Bill Cheek was not listed in the 1985, or subsequent editions of the directory.

A check with the National Mensa office in Fort Worth, TX revealed the following facts about a persons membership. Once a person has qualified for membership, he is qualified for life. He may let his membership lapse at any time for any reason. He may then rejoin at any later time by simply paying the current dues. A members IQ does not drop as soon as his membership expires, as John Mackey would have us believe.

Gee, it looks like Bill Cheek DID tell the truth, unlike John Mackey.

1319. Evidence John Mackey Lied About His "Articles"

OK Toilet Boy, you say you've written lots of articles for the ARRL and other technical journals. The ARRL does not show you as author for anything and no articles in ANY technical journals have been found. Here is the proof that you lied about your articles.

Several people have visited the ARRL Web Site (www.arrl.org), and searched, finding nothing written by you. You claim they used faulty search methods. Here are the results of my search of the ARRL Web Site using "john mackey" and "ka0ssf" as search parameters. Before you get all excited and claim my search method was faulty because I did not use any capitalization, the search engine is case INsensitive.

Regarding the search for "john mackey," the first, third, and fourth hits showed only because of "John" and "Mackey". The second hit refers to The ARRL Letter for July 5, 1996. That was the issue the contained the item about PARG catching a jammer.

Regarding the search for "ka0ssf," the only hit was a duplicate from above.

The original article appeared on the PARG web page (www.parg.org) does not credit you as the author. That article is reproduced below in its entirety. The next article is from the HamRadio Online web site (www.hamradio-online.com), also reproduced below in its entirety, does show you as author. Finally, the item in The ARRL Letter is shown below as well. It does not credit you as author either.

It is interesting to note that the HamRadio Online piece appeared in the June 1996 issue and the PARG piece appeared in July 1996. Why would your own group not credit you with authorship? Why would you use the email address of someone else (mscott@teleport.com) instead of your own? Oh yes, I remember now. That was the time (March through August 1996) that you were using one of eight bogus addresses because you were stealing Internet access. Let's see, you were using the addresses:

John.Mackey_Jr@p234.f40.n105.z1.fidonet.org
John.mackey_jr@p234.n40.f105.z1.fidonet.org
Here.now@present.com
no.address@anywhere.com
no.address@anywhere.gov
No-place@anywhere.org
no--place@any-where.com

no__place@any__where.com

Comparing the three articles side by side, it is very clear that the first article, which appeared in HamRadio Online, was reworked for the PARG web page. Then the ARRL edited it for their use. No matter how you slice it, you have not written several articles, as you've claimed.

Again, Toilet Boy, you lied.

And now, the evidence:

Amateurs Locate Police Jammer in Oregon

by John Mackey, KA0SSF, mscott@teleport.com

During June 1st, 1996 in Seaside Oregon, where the SEA-PAC ham
convention was being held, a group of hams belonging to PARG
(Phantoms Amateur Radio Group) were down on the beach front
enjoying the annual PARG bonfire. One of the hams (KB7YZS) was
monitoring the local Seaside Police Dept. He heard someone

cursing and yelling at people. At first he thought it was coming from the UHF side on his hand-held transceiver, but to his surprise it was coming from the VHF side which was monitoring the police.

He promptly notified everyone at the bonfire to listen. After a few minutes of listening to the person, the members had figured out that the person was up in a balcony, was with 3 or more people and 2 of which were females. They realized this because of key things he said and voices in the background.

The 4 PARG members in the group (KB7YZS, KB7YZR, N7XMD, and AA7UP) just happen to be most of the PARG Interference Committee. They immediately activated the PARG Interference Committee direction finding operations. They promptly tracked down the interference to a specific location of the Shilo Inn and searched for someone matching the description. After only 5 minutes they saw a group of people on the third floor of the Shilo who matched the description. Then they saw him pick up his hand-held transceiver and speak into it. At the very same moment the voice on the police frequency was saying "Hey, fat ass, yea you in the black pants and the white shirt". While he was saying this on the Seaside Police frequency the members noticed a man wearing those clothes, a little on the heavy side walking directly underneath them.

One of the PARG members saw a Seaside Police patrol car in the area. A PARG representative approached the officer and asked him if he was looking for a person causing interference to the Police Frequency. He seemed very upset and replied "YES"! The PARG representative then informed the Seaside Police Officer where the malicious interference was coming from. Three other PARG members were on their way to the third floor when they saw the people (from the room/balcony where the interference was) come running down the stairs and away from the Shilo.

The officer took a report from the PARG representative, including an exact location of the motel room and spoke to the hotel manager. After 2 hours the interference started up again. The Seaside Police Officer went directly to the room the PARG Interference team pointed out and caught the person in the act of doing the deeds.

The above is known to be facts. The above mentioned is knowledge from speaking the PARG Interference Committee members and to a friend of the suspect.

The man who in is question has a call sign of KE6VNU and is from Central California. He apparently was in Oregon for the ham convention. Information indicates he was released from jail only a short time before this incident, the charge he was in jail for was malicious interference to the local police in his area. This obviously did not teach him his lesson. We understand that he caused a great amount of interference to the Sacramento County and

Roseville emergency/public services communications and often identified himself on those malicious transmissions as "The Phantom Jammer". We were told the charge Seaside Police brought against him was "Interference of a police officer in line of duties".

Note: It is an unfortunate coincidence that the malicious interferer used the name "Phantom Jammer". He has absolutely NO association with or relation to PARG (Phantom's Amateur Radio Group), the group which located him & turned the necessary information into the Seaside Police which led to his arrest for the interference. We did not release this information until now at the request of the local law enforcement officials to prevent tainting their investigation.

This was PARG's second year in a row of providing public services during the Seaside Ham Convention. Last year several PARG members apprehended a purse thief (after a brief foot pursuit), returned the purse to the rightful owner, and detained the suspect until police could arrive. PARG also performed crowd control activities at this time due to the large number of people who stopped to watch the purse thief incident.

PARG is the Phantom's Amateur Radio Group in Portland, OR and is Portland's most active VE testing, repeater club, emergency communications, and ham radio group. Please visit our web page at http://www.teleport.com/~mscott/dumb.shtml.
You can contact PARG at

PARG, PO Box 1586, Beaverton, Oregon 97075-1586

The PARG Crack
The Official Newsletter of the Phantoms Amateur Radio Group
"We are anything but complacent"

July 1996 - Portland, Oregon - ONLINE EDITION

Interference Committee Stops Californian Jammer

The SeaPac ham convention was saved once again by PARG representatives. In a valiant effort to restore peace and safety to the coastal community, members of the PARG Interference Committee assisted Seaside Police officers in the apprehension of an individual jamming their dispatch frequency.

During the annual PARG bon fire, several members of the Interference Committee were monitoring the local police dispatch frequency. As they were completing a safety check of the area before returning to their accommodations for the evening, the Committee members heard someone sending malicious transmissions on the VHF dispatch frequency. Immediately, the field operations of the Interference Tracking Unit (ITU) were activated and the search began for the jammer.

After a relatively short and efficient investigation, the ITU determined that the illegal signal was originating from a shore front hotel. This information was derived from both direction finding techniques and verbal clues left by the jammer.

The group immediately broke into two teams and sent a representative to contact a police officer who was patrolling in the area. The other team went to the hotel from which the suspected jammer was transmitting and watched his room for a possible escape attempt.

Soon after contact was made with the police department, the suspects were seen going down the hotel stairs and away from the building.

During the time that the suspects were out, the jamming ceased. About two hours later, the jamming started up again. When this happened, the officer the PARG representative had contacted returned to the room and apprehended the suspect.

According to reliable sources, the suspect, KE6VNU was arrested by the Seaside Police Department for the charge of Interfering with a police officer in the line of duties. In addition to being involved in this situation, the jammer was allegedly involved in similar activities in Sacramento County, California.

The outcome of any prosecution will be covered in a later edition of the PARG Crack.

PHANTOMS HELP NAB "THE PHANTOM JAMMER"

The Phantoms Amateur Radio Group (PARG) of Portland, Oregon, is claiming credit for helping police to nab "The Phantom Jammer," who was interfering with police calls in Seaside, Oregon, during the Northwest Division Convention in early June. John Mackey, KA0SSF, of PARG reports members were on the beach enjoying the annual PARG bonfire when KB7YZS heard someone "cursing and yelling at people" on the VHF police frequency, which he was monitoring at the time. After a few minutes of listening, members figured out that the person was up in a balcony and was with a mixed group.

KB7YZS, KB7YZR, N7XMD, and AA7UP (who just happen to be most of the PARG Interference Committee) immediately activated direction finding operations and tracked down the interference to a local motel. It only took them a few minutes to spot a group on a balcony, one of whom was using an H-T. After noting that the transmissions coincided with what they heard on the police frequency, PARG informed Seaside Police. A short time later, Mackey reports, Seaside Police "caught the person in the act."

Seaside Police subsequently charged Bobby Lee Aguero, KE6VNU, of Rocklin, California, with interfering with a police officer. As we've already reported in The ARRL Letter and in QST, Aguero, 19, already faces similar charges in California.

Mackey said this was the second consecutive year PARG got to provide a public service during the Seaside convention. Last year several PARG members apprehended a purse thief--after a brief foot pursuit--returned the purse to its rightful owner, and detained the suspect until police could arrive. PARG has a Web page at http://www.teleport.com/~mscott/dumb.shtml. The group's current president is Justin Bousquet, AB7NG.

Can anyone confirm what the trunktracker websites seem to show...that the Memphis trunked system uses digital encryption for police & fire, but analog for other city agencies?

Harry, N6URU

1331. Can you find any frequency?

Hi,

I am looking for new and updated frequencies for
Wyandotte, MI. If you have access to the "latest" frequencies on the
internet or through the fcc.... Please forward them to me.

Thanks in advance,

Jeff Trudell

Web Page: http://ourworld.compuserve.com/homepages/rawhide_home_page

1998 JAN 12 20:05 PST

Missile Launch Status/Communications Plan

Last week I called a public affairs officer at the Strategic Defense agency near Washington, D.C. and was told that this month's launch of a modified Minuteman II from Vandenberg AFB was scheduled for Friday, the 16th. This information appears to be wrong.

I called the Public Affairs Office at Vandenberg AFB this morning and was told that the launch is still set for this Thursday, January 15th at 17:39 PST (the launch window runs from 17:39-20:39 PST).

If the launch occurs on time, it should be visible as far away as central Arizona, central Nevada, southwestern Utah, most of California, and northern Mexico.

Here's a plan for passing along the countdown status:

1. Start the Vandenberg Launch Net at 17:00 PST on the 147.000 MHz Santa Barbara repeater (PL 131.8 Hz, -600 KHz offset). There's a good chance that I'll be on-base and able to pass the countdown status over this net. As a backup, a few hams will be given a special telephone number on the base where they can get this information and subsequently share on the repeater.

2. Start a parallel Vandenberg Launch Net at 17:00 PST on 3,815.5 KHz LSB.

3. Have the hams who can hear the Santa Barbara repeater, and who have 80 meter capability, pass what they hear on the VHF net over to the HF net. For those of you in oulying areas, you can try calling Dan, AC6NZ in Oxnard, California on 80-meters for launch info.

4. Have the hams in Arizona, Nevada, and southwest Utah pass what they hear on the HF net over their local 2-meter repeaters. As a backup, a few hams in these areas will be given the special telephone number at Vandenberg in case the 80 meter net breaks down.

To help pull this thing off, I need the following:

1. The telephone number of at least one ham who lives very close to Vandenberg AFB and who has 2- and 80-meter capability.

2. The telephone number of one ham in Arizona, Nevada, and southwestern Utah who has 80-meter capability.

Please feel free to retransmit this message via packet radio and other means.

As the launch date approaches, refer to my web page for updates (the address is given above). Also, call the Vandenberg Launch Update Line at 805-734-8232 extension 61857. Be advised, however, that this number isn't updated from T-1 hour to T+1 hour (the Public Affairs Office staff is busy supporting the news media and answering phones).

I ordered a item from Bandercom around the 20th of December and have not received it as of now. I used a credit card to pay for the item. My statement came today and I found that the charge was placed on my card 12-22-97. The item was $279. including shipping costs. I was charged $281.15 for some reason. Not much diff. but not what I was told. I received E mail from Pete at Bandercom on Jan.10th stating my order and 2 other orders coming to the united states have been lost. Pete has indicated that he has shipped another item to me to replace the lost one. I will post again to let people know the outcome of this. Just don't want anyone else to get messed up if this deal does not turn out right.

1/12/98 Trunk Manager for Windows 95 Released

It's finally here! I just released my new shareware program, Trunk Manager for Windows 95.

Use Trunk Manager to store, sort, search, filter, print, and web-publish your trunked radio system information. You can also import/export from/to the trunker.exe *grp.txt format.

If you've been using Radio Manager's Virtual Key Pad in TrunkTracking mode with the look-up database option, then you can use Trunk Manager with its much more robust functions and features to manage that data.

Please visit my website for more details and to download and try for yourself.

I bought a Sanyo digital spread spectrum a few months ago for about
$120 from Circuit City. It works very well. I have about a three block
range right now, which probably could be improved with some tinkering.

My only complaint is that it sends out a regular 900mhz pulse which I
would hear on my 900mhz wireless speakers. I have given them away.

Hi,

>Does it do cell for USA at correct spacing? Can steps be changed?

On the PRO-60 the default step size at 800MHz is 12.5kHz.

Whilst the mode can be chnaged on any frequency the PRO-60 does not have
programmable step sizes so you can't change to anything else I'm afraid.

>what about steps in 44- 49 mhz range?

5kHz.

Hope that helps.

1357. FS: Yaesu FT-50R 5 watt dual-bander w/accessories

Newsgroup: rec.radio.scanner
Date: 1998-01-12 00:00:00 UTC
From: tthowley@edcen.ehhs.cmich.edu
Message-ID: <34b98253.0@zeus.moa.net>
Source record: 174226
Cross-posted to: rec.radio.scanner,rec.radio.swap

For sale Yaesu Ft-50R 5 watt dual-bander with standard keypad. 2Meter/440. Mars/Cap mod done for wide band transmit and super wide receive. TX: 144-159MHz, 420-470MHz. RX: 76-200MHz, 380-500MHz, 800-999MHz Cellular Blocked.

Includes the following accessories:

FT-50R Radio
AC Adapter/Charger
Original radio box
Original Manual
Downloaded color pictures and Mod docs
Speaker Mic
ADMS-1C PC Programming software
ADMS-1C PC Programming cable
Cigarette Lighter Adapter
Drop In charger sleeve modified to attach to the supplied AC adapter to allow drop in charging.

Total purchase price of all above parts: $460

1.5 years old. Asking $360. I pay shipping COD. No trades. Sold as set only.

Details of charger Mod: I wired the supplied AC adapter to contacts inside the charging sleeve that Yaesu sells to allow this radio to fit into their fast charger. It does fast charge the radio without having to purchase the $100 charging unit. The AC adapter no longer connects to the AC jack on the side of the radio. If needed you could solder the end back onto the Adapter and use it as normal.

This radio has barely been used due to leaving the Ham radio hobby shortly after purchase.

Tom

What's the big deal? I mean, they're ok scanners, not great. I had one in my car for 7 years. It's the Tonka of scanners, 25 below zero, no problem, park the car in the sun all day, crank the heat inside up to 110+, no problem. B-U-T! The intermod was unreal, yuck! And the so called 800MHz band? Well, it all depends what you want to listen to...cellular was a pain because of the 12.5 KHz stepping....which by the way CAN'T be changed. I finally had to say goodbye to it after a girl-friend (she's no-longer) leaned on it and cracked the LCD display. A couple more good and bad points....the Mr8100 has a nice big, bright display either alpha or numeric and is quite loud when cranked up. Forget searching, it can't do it, and programming the thing via the keyboard OR software is a pain in the rear. I have a 760XLT and Pro-2026 in the car now and I'm content with both.

> have attended coursework in Oregon? (NO, you FOOL, I never did)

What does it matter? You never "attended coursework" anywhere
else, either....or if you did, then you're counting
kindergarten, elementary school, and junior high school.
High school doesn't count because you never finished it.

Let's face it, Mackey, you're just a transmogrified, hybrid
cross betwixt a la cucaracha and a la gnat with just enough
la pissant thrown in to make you a social deviant to all
species of roaches, gnats, and ants.

Your only claim is to profound imbecilic idiocy. You are
a gross degenerate reprobate, even unto your own kind.

1364. Pro-64 and Pro-2041 PC interface

Newsgroup: rec.radio.scanner

From: geovet@ix.netcom.com
Message-ID: <34b9eaa4.82607@nntp.ix.netcom.com>
Source record: 174233

In a previous post I said that the Pro-2041 could be interfaced
with a PC through the External Speaker jack. That is *not* correct.
The 2041 has both a jack on the back of the unit marked Ext. Spkr.
and a jack on the front panel with an earphone symbol above it.
The earphone jack on the front panel is where you want to plug the
PC interface cable. On the Pro-64 there is only one jack so you can't
hardly do it wrong <G>. Sorry for the misinformation.

Can't you READ, you blubbering imbecile? I didn't "come up"
with anything above. I used "*was*" as past tense, and put
quote marks around "Most Popular Bitch". I referred to
past matters.

My originality is apparent in my posts about how you
were born without any eyelids, and how the doctors
grafted pieces of your circumcised foreskin over your
eyes to make lids.

And then when you reached puberty, they plucked and
transplanted some pubies for eyelashes.

Also there's the one about your career advancement where
you started out as an Apprentice Baiter on a fishing boat
and rapidly advanced through Journeyman Baiter to
MASTER BAITER.

And the one about how you fell on your ass......

I have been *very* original about you, you friggin idiot.

We're going to work on your gene pool next.

You....Oh Mindless One....cannot possibly insult anyone else's
intelligence. But you do waste time and bandwidth since you
aren't interested in scanners and scanning.

> & trying to make up stories of BULLSHIT & making people
> believe them.
>
> It's that simple.

You made up stories of bullshit and tried to make people
believe how I mistreated poor little ol' you down in
FidoNet a couple of years ago.

All I did was kick your sorry ass off the Net when you
acted there like you do here. But that was no biggie
either, since I could legitimately kick your fat ass off
for !!no reason at all!! You still can't get it into your
airhead that FidoNet forums *are* the personal property
of the Moderators.....just like your car (if you have one)
is your personal property.

A FidoNet Moderator *gets* to say who can participate and
who can't. I said you *couldn't* and it *was* THAT simple.

Except that you and your sore ass have been wreaking havoc
and consternation on this newsgroup ever since.

You got yourself porked, Mongoloid, and you've been pissed
ever since. You're a sore loser....

The stories about your foreskinned eyelids and rapid
career advancement to MASTER BAITER surfaced only AFTER
you shoveled your brand of bullshit around here for the
last two years.

You and houseflies are a lot alike, Mongoloid Mackey! You
both eat shit and bother people.

Guess I'm stuck in your craw real good, huh Mackster?

<horselaughing>

John Mackey, KA0SSF, was reportedly overheard the
other day chatting on 2-m with a ham who had a very
pronounced lisp.

Apparently they were mobile and parked on a hill
in or near Portland, Oregon, overlooking the
mighty Columbia River.

The ham with the lisp was overheard to say:

"Oh goodneth thaketh, Johnnie, look at that
cute ferry boat down there crothing the river."

And Mackey was overheard to exuberantly reply:

"Fantastic! I didn't know *we* had a navy!"

===

This report courtesy of a Portland, OR, radio monitor.

No.

> Anyone have enough experience with it to call this a useful feature?

While somewhat useful, it's coverage is too limiting, i.e. you
only get a display of activity that's a few steps plus/minus
the center frequency. The AR8000 uses a similar method. The
band scope found on the MVT-9000 or DJ-X10 is much more useful
since it covers a much larger # of steps either side of the
center frequency meaning you see more activity at once.

Well you broke the law repeating what you heard!

BTW, the police are not responsible to protect your life and make sure
you're safe, as you say, YOU ARE. They're in charge of keeping the peace.
As someone else so eloquently said, "In a crime there are three parties.
the criminal, the victim and the police. Who always gets there last?"

I wouldn't want their job. My locals are good cops, thankfully!

1380. hamcomm & dx-390

Newsgroup: rec.radio.scanner
Date: 1998-01-12 00:00:00 UTC
From: Jeff <scanner@accessus.net>
Message-ID: <34BA60D4.5DDC@accessus.net>
Source record: 174249

has anyone been able to connect a 390 to a pc via the hammcom type

interface and the ear phone jack?

do i need a baseband output?

the interface works fine with the program pd-203 and my bc9000xlt's

baseband output, but i have split the ear phone jack on my 390 and

listened to the signal when i plug in the pc and interface and it seems

to distort the signal alittle. i get a signal in ok, but the text

doesn't

decode right. i have tried many different stations and many different

settings on the hammcom program. the tune feature seems to work as well

as the other signal viewers.

thanks for any help!

jeff

VTech makes several 900mhz models that have the features that you
want. If you live in an are that passes the "call waiting caller id"
on the line, some of the available phones will support that. I have a
VTech 1910c, and cannot receive it on my scanner. Overall VTech makes
a good product, you just have to be willing to pay the price for the
security. Some of the 900mhz phones that are marketed as digital are
NOT, and can be received with no problem by an ordinary scanner.

Also, if you have any neighbors that are hard core RF folks, and have
deep pockets to get that really expensive equipment, they can probably
pick up most 900mhz phones with no problem. Usually those people
actually have a life, unlike your neighbor down the block.

No special equipment needed to pick up 900Mhz phones. Quite a few of the 900 phones are not digital. If the phone is digital only, it can still be picked up, but not audible. You would need something to convert the digital garb back to analog.

If it is Digital Spread Spectrum, good luck. There is nothing out there (today) that can touch it.

>>Sorry if I'm repeating a discussion that has already come and gone. I'm
>>looking to buy a digital cordless phone after my neighbor told me that she

Maybe you should inform your neighbor that she just broke a Federal law and shouldn't flap her yap about it......

See what type of reaction you get from that!

Well I called them.

Yes - they will sell a 235XLT for $199.95 - IF - you order the package
deal for $323.80. The package deal includes a carrying case, power cord
and car antenna.
So you spend $323.80 to get a radio for $199.95 and another $123.85 for
those 'extras' in the package deal.

But you probably already knew this ...

>wanna use the software, dimwit.

As a developer I can completely vouch for the difficulty in trying to
develop software for Win 3.1 over Win95. I can tell that WinTone uses lots
of the 32bit Win95 stuff to work well.

Making a build for Win 3.1 would be a very, very long undertaking and he would
have to basically re-write a good portion of the program, and it couldn't
have many of the features and speed of the current version.

...and, although you hate to hear this, from an economic standpoint, it would
take more than the $20 registration or whatever to make him (or me, if I did
it) spend 200+ hours to "downgrade" the routines to work with Win 3.1.

Just like when I was working with the big software companies -- if you are
willing to commit to something like, say, 100 copies of a 3.1 version, then
it would be worth while to do it. For just a single registration is isn't
worth all the work for maybe what will end up being 2 or 3 copies sold. I'm
sure the guy has a day job, too.

If you can, consider upgrading to Win95. Yea, sure, Microsoft is evil and
we should all be running Linux or something, but modern software is being
written for Win95, and there are lots of advantages to moving up with the
market.

I personally use Windows NT workstation and think it's fine.

FCC ACTS TO HALT INTERNET ACCESS FEE RUMOR

At week's end, the Federal Communications Commission released a Fact Sheet intended to quell rumors that per-minute Internet access fees were again under consideration. The source of the confusion was traced to an unrelated Universal Service proceeding soliciting comment on the legal status of Internet services under the Telecommunications Act. (FCC)

Source record: 174272

The Hi-Cut on the 9000 puts a low-pass filter in the audio output to attenuate the high frequencies. It will generally help the audio understandability if you are listening with headphones or earphones, especially the latter, which tend to accentuate the higher frequencies.

Dave

I'm not sure but I think the lake he is referring to is Lake Erie, outside of Cleveland, Ohio. I know that 2 of the news stations recently bought news helos, and my guess is that he needs the frequencies for these helos, which I don't have, but I do have some of the news frequencies programmed in, but I live about an hour east of Cleveland, and have not picked up any helo's yet.

It depends on what you want in a scanner. Similar to buying a car,
it depends on what you desire in that product.

Without knowing what you desire, there is no good advice I can
give you because of the wide variety of options.

If you do not know, then go buy a used MX3000 or other Regency or
Bearcat scanner to become familar with scanning then you
will develope a sense of what you desire.

Anyone with an alinco DJ-X10 and wondering how to program it via
computer should check out my info pages on it:
http://home.earthlink.net/~baptpdc/icommods.htm

I've got quite a bit of the cloning info decoded and have a utility
for reprogramming the opening greeting banner.

The best thing of all is it's use of a standard icom type level
converter for programming. If you've got the IC-R10 cloning cable,
all you need is a reducing adaptor for the plug.

Everyone,

rec.radio.commercial-lmr is up and running!!

Come here to discuss commercial radio interested, including programming, equipment etc.

Lets start posting here....!!!!

1431. posting help

Newsgroup: rec.radio.scanner
Date: 1998-01-13 00:00:00 UTC
From: Steve & Julia Hulse <hulse@earthlink.net>
Message-ID: <34BBD705.76C9D45E@earthlink.net>
Source record: 173952

Hi all,
I have a hopefully simple question, When I want to post a question I

would like to do it in this manner; I have a mail list set up to send my

question to two scanner email mailing lists and to alt.radio.scanner and

rec.radio.scanner.
Now when I send, it will go to the email lists but not to the
newsgroup lists, it will do it when I am in the newsgroups though. Is it

possible for me to send to all of these as though I was sending a
regular mail? If so, how?

Thanks for the help
Steve-O

Hi John!

Glad to see you back. I want to get a new TrunkTracker handheld. Everyone says to go with the BC235 but I'm thinking the PRO90. What do you say? Can you give me a little advice on which one to buy? Thanks for all of your help. You're really an asset to the newsgroup.

Really!! When have I said I held "several" degrees? Please
re-post that post of mine where I say that.

> Since you made the statement, the onus
> of proof is one you to back them up. no one else here needs to prove
> otherwise.. you are resposible for proving you are correct.

YES!! I have been saying that ANYONE who states they hold any degrees
or licenses is responsible for proving that at any time!!! I agree
with you completely, Eric!! It makes me wonder WHY then when YOUR
KNIGHT IN SHINING ARMOUR Bill Cheek claimed to have multiple
masters degrees & FCC liceses & other credentials (like engineering
& Mensa) that you DID NOT jump on this "prove it" band wagon?
Infact, Bill Cheek was asked to provide proof of all the above
(since 18 months ago) & has NEVER done so!! Instead, you have only
acted to protect & provide cover for Bill Cheek!!

When Bill Cheek is held to the same level of scrutiny as I am THEN
I will comply in logical order.

Hi Chris, In my opinion you should start off with very simple projects first and work your way up from there and the receiver project will be a few years up the road. But until then just buy a cheap scanner at a ham swap if you need to listen to that frequency. Good luck and never give up. Best wishes.. Mike Burch K8MB..

You are correct.

My main purpose in providing the links (see below) was that there were so
many
rumors as to the FCC's position. For better or worse, the public face that
they are
putting on the issue can be found at:

http://www.fcc.gov/Bureaus/Common_Carrier/Factsheets/ispfact.html
http://www.fcc.gov/Bureaus/Common_Carrier/Public_Notices/1998/da980002.html

Like Mickey, I would encourage you to read them (very) closely.

Stay Safe!

The PRO-34 is probably cheapest handheld you can restore
cellular. But is only double conversion. Seen one in pawn
shop for $80.

Be careful with PRO-43. Later ones can not be restored.
PRO-43 is triple conversion. $175 is cheapest you will find.
Most probably cost you $250.

For Sale:

AOR AR 8000 wide range receiver
(This is the original cell capable model)
- Receives .1 - 1900 Mhz.
- Modes: AM, NFM, WFM, USB, LSB, AUTO
- 1000 channels, 20 banks.
- Auto-store, search and scan lockout.
- Tons of other features.
- Has sputtering squelch mod done.
- Has slight wear on keypad and by the tuning knob.
- Unit works great.
- Box and Manual included.
- Ni-Cad Batteries included.
- Recharger and antenna included.

Optoelectronics OptoLinx Computer Interface
- This unit is 3 months old.
- Works and looks like new.
- Allows computer control of AR 8000.
- All cables included.

PRICE for both: $700 or best offer.
(Money order only, no checks, please)

Reason for selling: I have too many radios already, and I just
bought a PRO-2006.

REMOVE NOSPAM from my return address.

> 50' run from the 2 meter radio to the antenna.

Since you want to use a scanner (ie Rx usage), one obvious soloution
is to use a low noise preamp at the antenna. The noise figure, of the
whole system is then mostly decided by the preamp, making the cable
loss much less important, and allowing you to use thinner more lossy
coax.

Calculate the coax loss at the frequencies of interest. However many dB
loss you find adds directly to the front end noise figure - unless of
course, the "front end" happens to be a preamp out near the antenna.

To hear a signal at all, it needs to be a bit above the noise floor!

73's & Good luck

my shorts".

Juicy.

1460. Trunk Tracking on WinRadio or ICOM PCR-1000?

Newsgroup: rec.radio.scanner
Date: 1998-01-13 00:00:00 UTC
From: Tom Greenli <tgreenli@nospam.vr-net.com>
Message-ID: <69h3o6rft1@nntp.structured.net>

Scanner Gang,

I have been searching this newsgroup via dejanews for an answer. So far I have not found one, or it has not yet been asked. Do either of the "Computer Scanners" WinRadio or Icom PCR-1000 have the capability to "trunk track"? I like both of these radio's but cant see buying one without this feature. Especially with most public service frequency's moving to the trunk system. Would this be a feature that could be added with a software upgrade or would is additional hardware/circuitry be needed? If trunk tracking is not available on these radios I'll stick with my old reliable PRO-2006 / CE-232 until it is.

Thanks,
Happy Scanning
Tom Greenli

PS I'll keep my PRO-2006 / CE232 until one of us dies.

1461. Opto Scout Grabs 807.95 at 250 feet.

Newsgroup: rec.radio.scanner
Date: 1998-01-13 00:00:00 UTC
From: jungle jim <junglejim@delta.com>
Message-ID: <34BC118C.665A4C6E@delta.com>
Source record: 173982

I was just surfing this news group when my Scout 40 beeped wildly. The display showed 807.95. When I looked out the window I saw flashing red and blue lights about 250 feet away. Wow, I actually scored the input to our local trunked 800 system from 250 feet. I don't have any connection with the Opto people but the Scout has really changed the way I listen to the radio. When I go out for lunch, on a daily basis, I bag at least a dozen freqs during the hour. I never realized how much radio traffic there was going on around me. I highly recommend using a frequency counter to enhance the hobby. I don't go out without my Scout anymore.

Happy Scanning,
junglejim

John "I even believe my own lies" Mackey -- KA0SSF wrote:

> YES!! I have been saying that ANYONE who states they hold any degrees
> or licenses is responsible for proving that at any time!!! I agree
> with you completely, Eric!!

Obviously, you have not included yourself when you said "ANYONE."
For if you did include yourself, you would be forthright and
provide the proof of YOUR degrees.

> Infact, Bill Cheek was asked to provide proof of all the above
> (since 18 months ago) & has NEVER done so!!

Actually, he did. I asked him for it privately last year, and he
willingly gave me the information without hesitation. It's been
great fun watching you whine because you didn't have it. It's
even doubly sweet now because you know I have the information you
desperately crave and you don't. How much are you willing to
grovel to get it, Toilet Boy?

> When Bill Cheek is held to the same level of scrutiny as I am THEN
> I will comply in logical order.

You asked for the information first, therefore, just like in poker,
you must ante up before you can call. So, if you want the information,
toss the proof of YOUR degrees in the pot. Put up or shut up, Toilet
Boy. If you were for real, you should have had NO problem with this
concept. But, since you are just a putrid little liar with an ax
to grind, go suffer. Besides, you're just angry because you took
an IQ test and the results came back negative.

Watching you whine and lie for the past two years has shown you to
be a lazy parasite, profoundly ignorant, and a perpetually moronic
organism craving the warm god-flesh of the anointed. Something the
size of a baby hippo, the color of a week-old boiled potato, that
lives by itself, in the dark, in a double-wide on the outskirts of
Portland. It's covered with eyes and it sweats constantly. The
sweat runs into those eyes and makes them sting. It has no mouth,
no genitals, and can only express its mute extremes of murderous
rage and infantile desire by changing the channels on a universal
remote. Or by stalking people over the Internet.

>
> Joe
>

REMCS pages the Newark-area MICU's on their Channel 5, 155.295
MHz/85.4 Hz. Two-way communication is there or on REMCS Channel 1,
155.400 MHz/127.3Hz.
The units: MIC 1 (UMDNJ/Orange), MIC 2 (UMDNJ/Newark), MIC 3
(UMDNJ/Newark), MIC 5 (UMDNJ/EWR), MIC 6 (Clara Maas/Belleville), MIC 8
(UMDNJ/usually Newark). All but MIC 6 use 20# for the day truck, 21# for
the night truck, with "#" being the MIC number. MIC 6 used to be
206/216, but recently switched to 261/266. Most units run ~7-7, except
MIC 8 which is as needed, usually 1 shift about 1000-2200 only.
Other unit identifires on these frequencies: 100-series:
University EMS' Newark BLS trucks. 301/311: EMS Rescue (day/night).
400-series: street supervisor. 500-series: chiefs. 600-series: AMR's
Orange BLS trucks and supervisor.
I can suggest you try 155.175, 155.265, and 155.355 if the above
units aren't what you're looking for. I think CENCOM handles whatever of
Essex that REMCS doesn't, but I'm sure Scanner Master would be more of a
help than I am.
BTW- my news server noever got the original, which is why I'm in
the thread where I am.

PC World for $13/yr ?? Computer Shopper for $13/yr ??
You heard it right! You get the subscription; we get the financial support!
Portions of the proceeds go to The National Mental Health Project (a non-profit psychiatric foundation located in New York City) Its web site is still under construction http://www.voiceoftheweb.com/
Over a hundred more magazines to come - most around $12 a year (and yes- they are great titles)!!
Use the e-mail on the website. Sorry offer only in US. Check or AMEX accepted. Any questions- please email us- we love to have feedback.
How can we offer prices so low? The Foundation's patrons love incentives to get the volunteers and workers involved in building The National Mental Health Project. They offered to pay the full price to the magazine publisher.. As a result, the you, the supporter gets a great deal on your favorite magazine, your money goes directly to The National Mental Health Project and the leaders of the organization get to see that the volunteers and workers are busy, active, and productive in getting the word out about mental health

Wintone, Schmintone -- get the Optoelectronics decoder. For $89, it works
and works well. Better than a HOKA decoder in DTMF mode on a pentium 100.
I never got the wintone demo to work. There's even a Macintosh version
that doesn't work that well, too.

For a scanner application with small diameter coax, I would use RG-6. Yes, RG-6 is 75 ohms, but for a 50 foot run the loss from the mismatched impedence of the low loss RG-6 would be less than a high loss matched coax such as RG-58. RG-6 is about 26 cents a foot at Rat Shack.

Probably nothing. MODERN Ladderline handles those types of
issues quite well (certainly better than coax).

Bill, that is the best system because of the low loss & low noise. Plus
with a balanced tuner you can tune it for a very wide range.

I am surprised, I thought you knew these things.

> >Dipole, my ass. Dipoles are resonant antennas, you imbecile.
> >
> >Balanced tuner, my ass. Balanced tuners are a needless
> >complexity, expense, and *system loss*, you imbecile.

NOT if they are feed with a balanced transmission line & a balanced
tuner. Then they can be easily tuned for adjustment. Infact on the
higher bands you get a little gain from them!

> >Close that 1934 edition of the ham radio handbook, you
> >imbecile, and join the 21st century.

You would do well to follow your own advice, Bill.

If either of those 2 spots use a GE or Johnson system, the
Trunktracker won't handle it; however, if you are sure they're a
Motorola type, check out the trunking links found at the end of my list
of United States URLs on the Baltimore Radio TV Society's home page for
the kind of system they use:

Message-ID: <19980113043216.28237.qmail@nym.alias.net>
Source record: 174028

I'm just wondering if anyone here has ordered the UK Pro-26 logic board (or chip) from Javiation, and if so, what kind of problems did you encounter? I don't mean any problems with the product itself, more like any trouble importing it into the US, any hassles from customs, etc? I was in touch with Javiation and they were extremely helpful, but since I'm not familiar with import law, I still thought I should at least check with anyone who's ordered from the US, just to be on the safe side.

Thanks in advance, I appreciate it very much.

P.S, thanks to everyone who replied to my grove question awhile back; they've definitely won me over as a customer

The scanner's PLL and local oscillators operate in that
range. If it were tunable, it would be generally useless
because of the birdies and spurious signals.

> Also, is there a way to unlock that range?

Sorry, no. But this range locked out is one facet of
why the PRO-2006 (and the PRO-2004/5, PRO-2035/2041)
are such darned good scanners.

Ummmmmmm.......perhaps that "other" ham with the
lisp *was* Petey Joe Boe? Did you ever stop to
consider that? They're BOTH in the Portland area,
you know? Don't you know?

If not....well....at least LAUGH, okay? Not everything
has to be deadly serious. If it does, then you can
derned well pack it up; roll it into a little torpedo-
shaped cylinder and ram it up your grump stump. And
I'll be happy to light the fuse for you.

Eh?

I neither meant to correct you nor to require an
apology. For all I knew, you knew something I didn't.
I just wanted to know if you were sure.

I suspect you were thinking of the new PRO-2050, but
according to Rich Wells, it is a clone of the PRO-90
and BC-235XLT - not the BC-895XLT.

But the bottom line is that I supposed you knew
something I didn't.

The V-Tech is junk!!! I bought one (and returned it!) and it is not even close to a digital transmission!!! They use digital voice frequency inversion in order to put that on the box.
Try the Sony SPP-SS960. It is the top of the line as far as cordless phones go. I say this as an owner and a sales associate. It is the ONLY phone I sold this Christmas I didn't get a single return on. You get a full display of 50 auto-dials, Call Waiting Caller ID, and standard Caller ID. All in the same phone. It is a true digital transmission, not voice inversion like the V-Tech. It also is a spread spectrum phone which means it transmits on several frequencies at once.
I have verified this with a frequency counter in my home. You can buy no better phone in my considered professional opinion and as a consumer. Radio Shack sells them for $229.99 (catalog # 43-8014). Yes, I work at Radio Shack, but I'm sure you won't buy it from me, so I won't see any commission on this (1% is all I get anyway!) If you want to look it up, it is on page 15 in the 1998 RS catalog.

Incorrect. It is a federal offence to disclose content of an intercepted cordless phone call to someone who was not a party to the reception. I am unsure, but I don't think it's a felony either. If I am wrong and they have changed this law, then please correct me and I will post an apology. Please include a US Code number or any other law reference number as applicable.

Very good point! The police officers we hire for our defense are only following the law in most cases. There are always exceptions, but not like you'd be led to beleive! If you have a problem with a law, don't blame it on the police. They don't make 'em... They just enforce 'em! The onse we should be screaming at are the politicians who enact laws without the backing of their constituency (hope I spelled that right). Just my two cents worth as well.

1516. Need to build 461.665 rec and other stuff...

Greetings. I'm fairly new to electronics in general, but I know how to use a soldering iron and am wanting to learn more. I have two 'problems' I need to 'solve,' which I've found is the best way for me to engage myself in something (learning best by doing something that's not a simple exercise, but that actually is important to me...) Having said that, I'd like to enlist the help of the readers of these various newsgroups in my search.

I need to build a device that will allow me to listen to frequency 461.665. I also need to build a couple of two-way radios with a limited (1-300 feet?) range, all locked onto the same frequency. Something akin to a CB-Radio. Can anyone give me any clues on how to get started? Are there any kits I can buy that might give me a head start on learning this stuff? How would I go about building the first item, especially? (Specifically, assuming I could locate plans or somesuch to build a radio receiver, how would I go about calculating the various values that would allow me to 'tune' it to the specified frequency?)

I appreciate any and all help I might receive in this... Thanks in advance!

- Chris Harshman

The recent Icom PCR-1000 computer controlled scanner has some built-in DTMF capabilities... Its a very interesting approach to scanning and a fairly good general coverage receiver.

The plans for the two-way radios is a noble project, but very illegal. Those are commercial frequencies, and must be licensed by the FCC and coordinated through PCIA. I for one would be VERY unhappy if someone started using unlicensed and non-accepted equipment on a channel I was licensed for.

Be careful about this.

Just my 2 cents worth.

Thank you, Dan. You made my day with your response to this guy.

While most newbie questions are valid, every so often you get one from someone who shouldn't be allowed anywhere near a power source, let alone be given a piece of equipment to connect to it.

While it is not new, have you considered the BC200XLT? Should be able to find a used one for $150 or so. If it is not already modified, it can be, quite easily (clip a diode kind of thing).

WASHINGTON, D.C.--The Institute for the Investigation of
Irregular Internet Phenomena announced today that many Internet
users are becoming infected by a new virus that causes them to
believe without question every groundless story, legend, and dire
warning that shows up in their inbox or on their browser.

The Gullibility Virus, as it is called, apparently makes people
believe forwarded copies of silly hoaxes relating to cookie
recipes, email viruses, taxes on modems, and get-rich-quick
schemes.

"These are not just readers of tabloids or people who buy lottery
tickets based on fortune cookie numbers," a spokesman said. "Most
are otherwise normal people, who would laugh at the same stories
if told to them by a stranger on a street corner." However, once
these same people become infected with the Gullibility Virus,
they believe anything they read on the Internet.

"My immunity to tall tales and bizarre claims is all gone,"
reported one weeping victim. "I believe every warning message and
sick child story my friends forward to me, even though most of
the messages are anonymous."

Another victim, now in remission, added, "When I first heard
about Good Times, I just accepted it without question. After all,
there were dozens of other recipients on the mail header, so I
thought the virus must be true."

It was a long time, the victim said, before she could stand up at
a Hoaxes Anonymous meeting and state, "My name is Jane, and I've
been hoaxed." Now however, she is spreading the word. "Challenge
and check whatever you read," she says.

Internet users are urged to examine themselves for symptoms of the virus, which include the following:

* The willingness to believe improbable stories without thinking.

* The urge to forward multiple copies of such stories to others.

* A lack of desire to take three minutes to check to see if a story is true.

T. C. is an example of someone recently infected. He told one reporter, "I read on the Net that the major ingredient in almost all shampoos makes your hair fall out, so I've stopped using shampoo." When told about the Gullibility Virus, T. C. said he would stop reading email, so that he would not become infected.

Anyone with symptoms like these is urged to seek help immediately. Experts recommend that at the first feelings of gullibility, Internet users rush to their favourite search engine and look up the item tempting them to thoughtless credence. Most hoaxes, legends, and tall tales have been widely discussed and exposed by the Internet community.

Courses in critical thinking are also widely available, and there is online help from many sources, including:

Department of Energy Computer Incident Advisory Capability at
http://ciac.llnl.gov/ciac/CIACHoaxes.html

Symantec Anti Virus Research Center at
http://www.symantec.com/avcenter/index.html

Hi All
I have a problem with my PCR1000 & wondered if its my fault, have i set something up wrong?

The radio works fine in "radio" mode, am,fm,ssb,cw
It only outputs audio in "component" mode on ssb & cw if the bandscope is disabled
It does not output ssb & cw audio in "Comms Receiver" mode at all
I have checked squelch & Tone squelch settings and they are ok

Is this correct, or have i got a duff set?

You can try RG-8X, also called mini-8. This is a foam insulated 50 ohm
cable about the size of RG-58. The loss is higher than RG-8, but less
than RG-58. Radio Shack carries it.

A common CATV 75 ohm cable would be RG-6. Its loss is a bit less
than RG-58, but the mismatch may make it worse in practice. I'd stick
with 50 ohm cables in a 50 ohm system unless there was a compelling
reason to use a different impedance.

> J. Lifter
> jlifter@worldnet.att.net
>
>
>

Here is a trick you may not have thought of: The CHP always has and probably always will use 154.905 Mhz as a mobile extender frequency. What this frequency does is take anything that comes through the officer's mobile radio and rebroadcast it to his hand held. The unit is very low power, so you only hear them within a mile or so. I just took a road trip to California and just kept the scanner on that frequency the whole time. Then, whenever I got close to a CHP unit, the scanner would come alive, which told me to slow it down a little bit ;-) Works pretty well for avoiding tickets, if you pay attention.(Remember those old CHiP's detectors you could get out of Popular Mechanics Magazine? That's what they did. I remember a CHP spokesperson claiming that such a device didn't work, and that a radar detector was a better buy. Funny thing is the CHP hardly uses radar, but always has that stupid extender on! Interesting...)

-Also-

How old is your book? The reason I ask is because the CHP is also now using the old 39mhz LASD frequencies. In some areas, 42 mhz is no longer used for normal comm's. If you have an older book, look up and add LA County's 39 mhz frequencies to your scanner program. Or go get yourself a copy of the Southern California Detail edition of Police Call. It lists frequencies and unit numbers for the whole state, including the new 39mhz ones.

Read the article. We aren't out of the woods yet.

The FCC is considering "actions other than imposition of per-minute access
charges on ISPs."

Nothing says that internet users could not be stuck with other fees, just
not "per-minute" fees. It could end up like your local phone bill where
you get "911 equalization surcharges", "long distance access",
and many other "minor" charges. (Minor at first, but they always
grow over time.)

It's known as being cheap. If the range were included then it would mean extra circuitry and it would cost extra money to manufacture the scanner.
I've worked in manuf. engineering for a while and there are shortcuts (know as "optimization") in pretty much any product that is mass produced. I can recall projects where I've worked long and hard to reduce the build-cost of a 200$ product by 50 cents. Sometimes you get lucky and end up improving something in the process. If you get too ambitious, (usually as a result of higher Mgt being too frugal!) you end up with a product that has reduced features. Afterwards, the Mgr. writes
up a report demonstrating to the Pres. how much money he saved and gets a
big-fat bonus! Hee hee! By the time the Sales and marketing team pay attention to the Engineering team and sales figures, and realize that sales have sufferred as a result of the shortcut(s), the Mgr. has been offerred a job somewhere else - because of his history of "Adding Value" to the organization!.....8-)

> Also, is there a way to unlock that range?

Yes, buy a portable TV set. The picture is much better! 8-)

Hi

I would like to say that AirNav - The Aircraft Tracking Software
for Windows - has now a mailing list for interested users.
By subscribing to it you will receive on your email box
information concerning AirNav upgrades.
To subscribe to it just go to AirNav homepage at:

http://www.geocities.com/SiliconValley/Lakes/9420 then click the
download/Mailing List Link and fill the form provided.

Hope this info is your interest, Andre Brandao

Best Regards, Andre Brandao,

NFM DISCRIMINATOR CHIPS - BASEBAND AUDIO - SQUELCH GATE DATA
==========

There is a growing interest in tapping the baseband audio
out of various scanners for decoding of a variety of esoteric
signals, including CTCSS, SCA, FSK, RTTY, FAX, etc. By and
large, such signals cannot be taken from TAPE REC jacks,
headphone jacks, and EXT SPEAKER jacks because of the voice-band
filtering that is done between the signal source and these
output jacks.

Therefore, it is necessary to tap the "baseband audio" directly
at the output of the discriminator chip for your scanner. Table 1
shows a list of scanners, the discriminator chip(s) used in the
scanner, circuit symbols of those chips, and three pins of general
interest on the chips: RF-Input, Scan Control, and, of course,
the baseband audio (discriminator output) pin.

Even though your scanner may not be listed below, try to find
its discriminator chip, and chances are it will be listed with
one or more scanners below, the pins of which will be the same
for your unlisted scanner! Corrections and additions to this
list are requested. See my mail and other addresses at the end
of this file.

For hookup information, see just after Table 1.

TABLE 1: SCANNER DISCRIMINATOR CHIP PINS OF INTEREST
Updated 01/13/98
CKT RF-in SCAN BASEBAND

HOOKUP PROCEDURE
==========

If you need the raw Discriminator baseband audio signal for external purposes, the best way to access it is via a jack installed in a convenient, unobtrusive location on the scanner.

1. Install an RCA or other jack in a desired place on the scanner's external case, typically the rear panel.

2. Connect the shell or outer frame part of the jack to scanner chassis ground.

3. Connect the (+) leg of a 2.2-uF tantalum capacitor to the Discriminator output Pin. (Capacitor should be tantalum, but can vary in value from 1.0-uF to 10-uF at a voltage rating of 25-50vdc.)

4. Connect the center conductor of a shielded coax (RG-174, etc) or shielded mic cable to the (-) leg of the capacitor.

5. Connect the shield of the cable at this end to a nearby PCB ground trace or spot.

6. Connect the center conductor of the other end of this cable to the center or hot lug of the jack.

7. Connect the shield of the cable at that end to the ground lug of the jack.

8. Fabricate or buy a shielded patch cable with one end to mate with the new jack on the rear of the scanner at that end....and the other end to mate with whatever jack is on the tape recorder, processor, decoder, or whatever device is to be connected at the other end.

"SCAN CONTROL" AND SQUELCH PIN DATA FOR
UNIDEN SCANNERS and Realistics made by Uniden
==========

Uniden does their darndest to make it difficult to hack their scanners. You guys have some work to do. Here's the deal: Even though all NFM discriminator chips have a SCAN CONTROL pin, Uniden doesn't always use it! Some Uniden scanners have a separate Squelch circuit with the SCAN CONTROL pin on the discriminator unused! You have to find the real Squelch circuit, and then determine the Logic for that circuit. It's easy, but differs from one scanner to the next, and I can't cover them all. I need your help.

See Table 2 below for a good reference. By and large, those with scanners of Uniden origin have to tackle the preliminaries in this fashion:

1. Locate the NFM Discriminator chip - you will find the Audio pin from Table 1. It remains valid.

2. Determine if the SCAN CONTROL pin on that chip
is used. (Follow its trace out on the PCB)

A. If so, then determine the logic order. If
the SCAN CONTROL pin is used, then we can
use it!

B. If the SCAN CONTROL pin is not used,
then locate the real Squelch circuit.
The schematic and block diagrams in
the service manual will be helpful.
Uniden uses chips like NJM2902,
NJM2904 & NJM3403 to generate Squelch
logic. Use your voltmeter to find a
spot where the Squelch logic is 0v and
5 or 8v, depending on the setting of
the Squelch control. Table 2 shows
details for those Uniden-made scanners
with which I am familiar.

I had seen it posted here awhile back, but can someone please provide me with the Radio Shack part numbers for the numberpad and the number for the jack(s) on the side used to recharge the unit. I had called 1-800-theshack but they don't have listings for that unit anymore. Thanks in advance for your help.

The PRO-43 (catalog# 20-300/9300) service manual contains
manufacturer's part numbers for these items, but not Radio Shack
part numbers:

1) J303, Jack, Charge - Mfr's part # = HEC2711-01-620
2) Key, Top - Mfr's part# = GE-91C-9212

The one about his eyelids was always my favorite.
John's gene pool might be an interesting topic but
I suspect the pool might be pretty shallow due to
all the inbreeding. Hehehehe.

1559. Best small diameter coax for VHF/UHF

Newsgroup: rec.radio.scanner
Date: 1998-01-13 00:00:00 UTC
From: cphillips@engineer.com
Message-ID: <69eqv7$b2e@bgtnsc01.worldnet.att.net>
Source record: 174125
Cross-posted to: rec.radio.amateur.antenna,rec.radio.scanner

I have a situation where I cannot use a large diameter coax cable for a 2 meter radio and a scanner.

There will be about a 50' run from the scanner to the antenna and about a 50' run from the 2 meter radio to the antenna.

Since the larger diameter 9913 type cables can't be used, which is the best choice among the small diameter cables?

It doesn't have have to be the same cable for both applications. I seem to remember reading about some small diameter 75 ohm cable (maybe from a cable TV application) that does a reasonably good job in scanner applications. Perhaps that would be the best choice for the scanner.

Your replys are appreciated.

Me, irritated by you? You flatter yourself, smegma breath. Just how do you expect to hold me accountable for anything? You're rather impotent (in many ways...) at enforcing anything on anyone.

It's like this, Toilet Boy (I'll type real slow so you can keep up):

I have the information you desperately want. If you didn't want this information so desperately, you wouldn't have pissed, moaned, cried, and whined so much about it the last two years. I will not GIVE you the information, but I will SELL it to you. The price and terms are NOT negotiable. You must do exactly what I want and in the order shown. This is the price:

Step 1: Post to the two scanner newsgroups the name of the school(s) you claim your degree(s) are from AND the date(s) the degree(s) were conferred.
Step 2: Wait for others to verify and post said verification to the newsgroups.

After you comply with Step 1 and 2, I will post the information you want. Remember, this is not a negotiation. If you want the information, pay the price.

> Then why is it that when ever there is trouble here YOU, or Eric Oyen,
> or Bill Cheek can ALWAYS be found in the threads?

You forgot to include yourself. You are, and have always been the common denominator.

> truth hurts, huh?

From you? Dream on, twit. Remember, madness takes its toll. Make sure you have exact change.

I think you're both right. Civilian market GPS units are receivers that capture (radio?) signals from satellites. These satallites broadcast repetative signals that carry the time (I think each satallites carries some kind of atomic clock). Because of the differing distances of different satellites from a given GPS receiver, the signal takes a little longer to get to the GPS unit than closer satellites. The result is that the GPS receiver will receive signals carrying slightly different times, even though all the clocks on the satellites are perfectly sychronized with each other.

Once you get steady signals from 3 satellites, somebody real good with math programmed the receiver to triangulate a 2-D position (latitude & longetude). With 4 or satellites in range, the GPS unit can calculate latitude, longetude, and altitude...even direction and speed of the unit.

That's a Joe Six-pack explanation. I may be off base on this.

I've got a Garmin GPS III and serial cable that plugs into my laptop running Street Atlas 5.0. In the monitoring mode, It displays a cursor on the map that shows my direction and speed on the laptop map as I

drive around (Pretty neat, but I'm pretty sure I spent a shitload of money on a neat but pretty useless toy. A "for sale" posting is not far in my future.) The laptop can use the cell phone to transmit my position to an interested party (Like anyone gives a shit exactly where *I* am at any given moment).

Street Atlas 5.0 has address to address routing. In other words, you just type in a starting and ending address, tell it to calculate the shortest, quickest, or scenic route and it maps out a line of travel. You then select "Upload Route to GPS" and it instantly puts the route on the little GPS, complete with all the turnoffs and displays time to next turn based on calucalted speed and direction. That's a pretty useful feature for business travel. (For the maximum two trips I take every year) So I think that is it's best feature. Street Atlas 5.0 comes with GPS ready features. Depending on the GPS you have, the more or less features you can access.

No...I don't sell this stuff for a living. Just a gizmo guy.

Just curious, what does management tell you to do if someone comes in
asks about a scanner to pick up cell phones?

I know they want to discourage any discussion of illegal activities, but
I was just curious on how they train their associates to deal with that
situation.

Nice radio. However, it has some slight design problems with the controls, IMO. It's very easy to accidentally change channels, or even turn the radio off. If it's on you belt and you're sitting in a car, it can switch channels, key up and transmit, or even switch off by accident. Keeping it in a cordura or leather case greatly reduces the chances of accidently changing controls.

In spite of these problems, we bought 30 of them for EMS use and are satisfied.

If you activate the bandscope when set for SSB/CW the SSB/CW reception
is disabled. I suspect that they use the SSB/CW IF for the bandscope by
sweeping the LO hence you can not have SSB/CW and bandscope at the same
time. It would also explain the bandscope limit of +/- 200kHz which
would be set by the first IF roofing filter.

>>> Part 2 of 2...

C7 thru C9: use not known, TGs not known.

C10 is a FD tac for Medical Incident Scenes (ambulance assist, MVAs, etc). Its talkgroup is not known. In fact, it may even be a non-trunked frequency. Still investigating.

C11 is supposedly a tac for large (in terms of area) incidents. Example: One crew wanted to try it out in a highrise. It may be the same type of setup as C10. Again, still looking. C12 may also be this way.

304 - Fire Dispatch North - C13
336 - Fire Dispatch South - C14
368 - Fire Dispatch Alternate (when above two get busy) - C15
400 - Fire Dispatch Alternate - C16

Others:
311 - Fire - this group shows up occasionally and is what I'm calling a 'patchgroup'--used by Fire to transmit on C13 and C14 at the same time.
343 - Fire - same thing as 311.

Any groups you find that are 5 digits long and start with a 3 (ie. 33080, 33976, etc) are Calgary Police Service talkgroups. You will notice that they all sound like buzzsaws, or a bus running at high idle right beside you. They're digital, and you can do one of three things: You can let the TT skip over them (will take about a quarter-second to do), you can set up a scan list instead of using Search mode (but I prefer using Search mode because I'm still trying to find TGs for about 18-20 channels), or you can try locking out all the CPS talkgroups while in Search mode. However, using this last method, I hit the limit of 100 talkgroups locked out, and still occasionally hear a stray "brraaap".

With only 8 frequencies at most per zone, I felt like I was being rather inefficient in storing frequencies in my TT. So what I did was program the trunk stuff in, then go into conventional mode and lock out all the trunk frequencies. Then I filled up the blank spots in those banks with my conventional frequencies. So I can hit TRNK and 1 and get the northwest trunk zone, or I can just hit SCAN and listen to all my conventional stuff on bank 1 instead. Since the trunking program apparently ignores the lockout flag, locking out the trunk frequencies doesn't affect trunk tracking, and it means that you won't hear the trunk data when scanning in conventional mode.

One more thing: In the EMS talkgroup listing above, I mention a simplex channel. This is not 'simplex' as I'm used to knowing it, which means a non-repeater frequency. Instead, this simplex concept means that those channels are 'separate' in each of the four zones of the city trunks. For example, if

an EMS unit on the northwest trunk is using A13, it'll only be heard on the northwest trunk--the A13 channel on the southeast, southwest, and central trunks will all be silent.

I think I've covered just about all of it. This info is up-to-date as of the date on this message. Again, if you want to know more, or if you want to know if I've uncovered anything else, email me.

>>> Part 1 of 2...

As promised, here is what info I've uncovered on the City of Calgary's new Motorola trunk system, used by its emergency services. While this info is not by any means complete, it is up-to-date enough to plug into a TrunkTracker and use quite well.

I won't post regular updates here (unless people ask for them); if you want to know more, and/or if I've found anything new lately, email me at derran@revenge.cuug.ab.ca.

The City of Calgary Emergency Services Trunk is a SmartZone system. It has four 'zones' or separate trunks that cover the city with the same traffic on all four (with one exception--see the talkgroup listing, below), and one zone that carries the backup-system talkgroups. The system, as far as I can tell, uses the three remaining Calgary Fire Department towers--Spy Hill, in the far northwest; Forest Lawn, near Memorial Drive and 19 St NE; and #19 Station, in the Canyon Meadows area. In addition, there is a new tower on top of Bankers Hall downtown, and there is a new tower on 37 Street SW at about the 16200 block. The Forest Lawn tower is the one that carries the backup system; the other four are the regular system.

The southwest (37 St), northwest (Spy Hill), and Central (Bankers Hall) zones all have 8 frequencies including the non-roaming data channel. The southeast (19 Station) zone, for some reason, appears to have only 7, and the northeast (Forest Lawn) backup zone has only 4. Each zone has to be put into a separate bank in the TrunkTracker, but you can still input all your conventional frequencies into the same bank, so long as you don't overwrite any of the trunk stuff, and essentially you can use the bank twice. (More on that later for those who don't know how to do it.)

While Fire and EMS are in the clear, Calgary Police Service is using what appears to be an ASTRO digital system on the same frequencies. My TT successfully skips over these transmissions, but I've locked out most of the CPS talkgroups. See below.

Here's the frequency allocations:
(Naturally, these sites have some overlap in their coverage areas, but I've tried to give you an idea of where it works best.)

Northwest Zone (Spy Hill tower)
Covers: Western portion of the city from Deerfoot Trail & Glenmore Trail to the northern limits; much of the surrounding area outside the city on the west and north sides (west to Bragg Creek, north to at least Cochrane)
Data Control Channel:

868.2625
Voice Channels:
866.2625
866.6125
866.7625
867.1125
867.6125
868.1125
868.6125

Southwest Zone (37 St tower)
Covers: Western portion of the city from Deerfoot Trail & Glenmore Trail south and west to city limits; much of the surrounding area on southwest corner of city (west to Bragg Creek; south limit unexplored)
Data:
866.1375
Voice:
866.2875
866.7875
867.2875
867.6375
867.7875
868.1375
868.6375

Southeast Zone (19 Stn tower)
Covers: Eastern portion of the city from MacLeod Trail & Glenmore Trail south and east to city limits; much of the surrounding area (limits unexplored)
Data:
866.0375
Voice:
866.1875
866.6875
867.5375
867.6875
868.0375
868.5375

Central Zone (Bankers Hall tower)
Covers: All other portions of city not covered by above three zones
Data:
868.2125
Voice:
866.2125
866.5625
866.7125
867.0625
867.5625
868.0625
868.5625

Forest Lawn Backup System
Covers: Apparently the city, but only to the city limits, no further
Data:
866.2375
Voice:
866.5375
867.2375
868.2375

There appears to be a frequency on each tower that is not allocated by the trunk at any time, and just has a Morse Code identifier on it:

866.0625 - CGA 411
866.1125 - ?
868.1875 - ?
868.2875 - CGA 399
868.7375 - CGA 407

There are a whole bunch of (as far as I can tell) unallocated frequencies.

866.6375
866.7375
867.0375
867.1375
867.1875
867.2125
867.2625
867.7125
867.7375
867.7625
868.6875
868.7125
868.7625
868.7875

Some of those zones seem to skip and cover other areas, too: Placed in an east-facing 3rd story window with my metallic telescoping RS "duck" fully extended, my TT can capture the central and southeast trunks quite clearly. My house is approximately 50 kilometers south-west of the city.

Anyway, on to the talkgroups. The Fire and EMS talkgroups are arranged by channel number based upon the design of the standard Motorola portable radio: it has a 3-position switch marked A/B/C, and a 16-position channel selector. Thus, the channels are known as A1 thru A16, B1 thru B16, and C1 thru C16. The tricky part: EMS and Fire do not use the same set of channels in the same order. For example: EMS calls their backup dispatch channel C5, while Fire calls EMS's backup dispatch B1. (C5 is a fire scene "tac" for them.) Fire has A13 and A14 set up as their backup dispatch channels; EMS has those in use as something else.

In any case, the channel numbers won't matter all that much, since you'll be watching for talkgroups instead. And they are as follows:

Emergency Medical Services Department
16400 - EMS Dispatch - A1
16496 - EMS Updates to responding rigs/clearing-up reports/general chatter
- A2
16560 - EMS Updates/clearup/chatter - A3
16592 - EMS Updates/clearup/chatter - A4
16624 - EMS Updates/clearup/chatter - A5
16656 - EMS Hospital Patches (patient status, etc) - A6
16720 - EMS Hospital Patches - A7
16752 - EMS Hospital Patches - A8
16784 - EMS Hospital Patches - A9
16816 - EMS Scene Tac (Simplex - heard in only one Zone at a time) - A10
16848 - EMS Scene Tac (Simplex) - A11
16912 - EMS Scene Tac (Simplex) - A12
16944 - EMS Scene Tac (Simplex) - A13
16976 - EMS - A14
17008 - EMS - A15
17040 - EMS - A16
16464 - EMS Dispatch, Backup System - C5 (known to fire as B1)
15376 - EMS misc. traffic (unconfirmed; channel name unknown)
15440 - misc. traffic (unconfirmed; channel name unknown)

Fire Department
All A-series channels appear to be same as EMS except where specified.
880 - Fire Dispatch, Backup System - A13
944 - Fire Dispatch, Backup System - A14
432 - Fire Inspection (non-emergency scene) Tac - B2
496 - Fire Inspection Tac - B3
560 - Fire Inspection Tac - B4

B5 thru B8 - unknown uses, unknown TGs.

TG numbers for the following are unknown.
Tri-Services: Command Channel - B9
Tri-Services: Command - B10
Tri-Services: Fire Standby - B11
Tri-Services: Fire Standby - B12
Tri-Services: EMS Standby - B13
Tri-Services: EMS Standby - B14
Tri-Services: Police Standby - B15
Tri-Services: Police Standby - B16

48 - Fire Scene Tac - C1
112 - Fire Scene Tac - C2
176 - Fire Scene Tac - C3
240 - Fire Scene Tac - C4
17168 - Fire Scene Tac - C5
17200 - Fire Scene Tac - C6

Well, I'll post it again so you can cut it out of your reply again.

I'm saying that you thought you were being funny by getting a temporary account
over at pacifier.net.

Another pathetic attempt from the mental patient.

You continue to fail my challenge with every post you make. Your whole life is
a failure.

Got this from the Icom site Weds AM.

http://icomamerica.com/specials/#R10 is the URL.

Save $100.00 on the IC-R10 Handheld Receiver
Limited time offer

When you purchase a new IC-R10 advanced, wide band handheld receiver
from a participating
authorized ICOM America Dealer between December 15, 1997 and March 31,
1998, the dealer
will knock $100 off the purchase price, right on the spot.

Offer open to residents of U.S. and Canada only. Offer valid on IC-R10
cellular blocked version
(05) only.

Not a bad deal.

Mark

Actually, you CAN monitor a DSS phone conversation in theory. What you'd do is take however many scanners as the number of freqs phone is transmitting at one time. Get each scanner tuned to one of those freqs. Then us an audio mixer board to combine all those signals. Now whether ANYONE would bother is another question, but that's what we used to do in the Army when I was working as a comms man. Anything is possible if you set your mind to it!

Nope. Been there and tried that.

1st off, you need to understand the logic behind 'Spread Spectrum'. It uses the same methodology as any secure encryption algorithm.

When you first plug in any SS phone, you'll need to 'synch up' the base and handset. This is normally done by some sort of physical connection between the two.

On my Uniden phone, I must leave the phone in the base and then press the 'intercom' button. This detects the phone in the cradle, then pumps the new code to the handset. All secure now. It can't be programmed any other way.

By powering off the base, and turning on the handset, you've cut communication. The handset will not find it's base and just timeout in a few seconds.

Even if you had another identical phone in the same room, it's code doesn't match the other, so it won't synch up.

BUT, I'm sure you could mix and match handsets as long as you used the physical programming method.

> > >it's sat in the sun for a time.
>
> Probably nothing. MODERN Ladderline handles those types of
> issues quite well (certainly better than coax).

Modern ladder lines? HA ha ha ha ha ha ha! They might be
good for a rhombic (maybe). But not to a dipole, you imbecile!
Ladder lines are a good 600-ohms Zo. The Input Z of a dipole
is 300 ohms, and lower when you fold it.

> Bill, that is the best system because of the low loss & low noise. Plus
> with a balanced tuner you can tune it for a very wide range.
>
> I am surprised, I thought you knew these things.

I know you are very stupid. A tuner goes between the
feedline and the antenna, otherwise, you'll be tuning the
line AND the antenna. But you DON'T tune dipoles, Ignats.
Not for broadband reception anyway.

> > >Dipole, my ass. Dipoles are resonant antennas, you imbecile.

I have heard of the macro virus, but then I don't use MicroSoft Word,
seems like Microsoft should have come up with a virus killer for the
macro virus by now. But then Word isn't backwards compatible with the
earlier version! I use Corel WordPerfect (hey hometown company, what can
I say!!!) I do run Norton Anti-Virus, and I am always leary of mystery
attachments that appear in my mailbox...

But again, anyone who runs any .exe file that some unknown person sends
them is just asking for trouble.

A Sign of the Times and indeed the No-Code philosophy--He has already forgotten he has a brain to do basic math with, if he ever knew. Quite likely he wasn't "required" to learn such mundane things as the multiplication tables and long division--That's where we are in education today, but no matter, an electronic calculator will save the day! Technology to the Rescue, Forever!
Wonder if it's stuck to his butt, he sure wouldn't want to lose it.

I am sure Pro-CWers suggest school kids to learn abacus and
use this old obselete "mode" which requires a lot of effort for some
people instead of plug 'n play calculator.

Abacus features:

- Requires practise to use it
- Old mode. More than 1000 years old.
- Very slow.
- Inaccurate
- Can be used during the Emergency because it doesn't use any
batteries (so what ?)

If you really force school kids to learn Abacus, you must be
really silly. (don't take me wrong. I know abacus and I
sometimes use its method when I calculate something in my head.
I always complain something after I try it... I have a qualification
that qualifies 10 9-11 x 25 digits +/- calculations within 10
minutes, 20 6-7 & 6-7 x or / calculations within 10 minutes and
more...)

This is very similar to CW/No-CW debate. CW requires practise, old
mode, relatively very slow, inaccurate and "could" be (?) used during
the emergency... but if you really think CW is heaven and does
everything, you are deadend.

Be a pro-abacus and many don't care.
Be a pro-CW and many don't care.

I have been using cable TV coax for years with no trouble at all. I even picked up transmissions from the Pennsylvania State Troopers and I live in southern Michigan! Radio Shack sells all the connectors and stuff you will need. Good luck

And, I disagree with your disagree. <g>
For a scanner application, with whatever for a scanner antenna, what are
the odds that the scanner will see 50 ohms looking into ANY feedline at
whatever frequency -- even if the scanner was designed for 50 ohms at
EVERY frequency?

Put the scanner at the antenna and run zip cord down to a speaker. :-)

I don't think you'll have much luck decoding taxi data (MDT data actually) thru the scanner speaker due to the audio filtering done within the scanner. By the time the audio hits your earphone jack, the highs and lows have been chopped off, which corrupts the data and makes it totally useless. You will need to tap the discriminator output of your scanner to decode anything faster than about 300 baud (MDT's are at 4800) Bill Cheek made a post recently that shows how this is done.

We are currently working on such a program, when we are ready to beta test it, maybe we can contact you? Let me know (enterdev@aol.com)

> EVERY frequency?

This is a good point. But it's usually good to start with spec. Most receivers are optimized plugged into 50 Ohm test gear. Tuned front ends with wide coverage are basically tweaked up at the top end. If a mismatch were to occur, it would undoubtedly be at the bottom of the band in question. As far as antenna themselves being 50 Ohms, I agree that not too many fit that bill! A good discone, log-periodic or folded-dipole are very good though.

I agree that the difference in signal will be minute between the two. The other reasons I gave make it worth *my* while not to bother with 75 Ohm coaxial cables. YMMV.

> Put the scanner at the antenna and run zip cord down to a speaker. :-)

Believe it or not, zip cord is typically 50 Ohms and I've seen QRP Tx/Rx stations using it successfully as feedline. Also, one notorious CBer in town used a bastardized extension cord for his antenna. He split the conductors with each leg about 102" and formed a dipole stapled to the wall of his house. I can't argue it, the VSWR was good and so was his signal!

The "discriminator" pin is really the Baseband Audio pin. The
entire chip is pretty much called the "discriminator".

The Squelch pin is good for tapping the Squelch gate for
a bunch of different sorts of things.....like a squelch
operated relay for auto-starting and stopping a tape
recorder....dozens more uses.

Has anyone had any luck modifying the Radio Shack Pro 66? I'm actually interested in modifying it to receive aviation bands more than anything else.

I've checked many of the extensive mod sites. Impressive stuff, but I think that my model might be too new for anyone to have much info on it. Is it close enough to another Pro or Uniden model that I can refer to other mod files that I've found?

Thanks.

I disagree.

75 Ohm coax isn't worth a pinch of shit. It's useless for transmitting
and completely unsaleable to another radio hobbyist should you no longer
need it.

Buy 50 Ohm coax and keep your options open.

For your application any "mini" RG8x non-contaminating coax is your best
bet.

The attention paid to impedance of "TV" cable by manufacturers is non-
existant whereas in 50 Ohm it's critical. I've seen many 75 Ohm cables
with the centre conductor offset within the foam dielectric.

Then you are stupider than he is, peckersnap. I also
observed that he needed to see a proctologist for a
cranial lobotomy.

You need to see one for some dental work.

Take your head out, Mackey, before you fart and
blow your miserable hermaphrodite brains out.

Eh?

1676. Re: CHP frequencies

Newsgroup: rec.radio.scanner
Date: 1998-01-14 00:00:00 UTC
From: "J. Lifter" <jlifter@worldnet.att.net>
Message-ID: <69hms2$hig@bgtnsc01.worldnet.att.net>
Source record: 173911

Actually, I have the new edition of Police Call and it does have the new freq's for San Diego. I am in Southern Cal. - NW SFV and VERY close to the antenna "farm" on top of Oat Mt. in Chatsworth. My problem lies in that the CHP uses such a low frequency and I need a longer antenna.

Thanks for the info ;)

|
| Here is a trick you may not have thought of: The CHP always has and
| probably always will use 154.905 Mhz as a mobile extender frequency. What
| this frequency does is take anything that comes through the officer's
| mobile radio and rebroadcast it to his hand held. The unit is very low
| power, so you only hear them within a mile or so. I just took a road trip
| to California and just kept the scanner on that frequency the whole time.
| Then, whenever I got close to a CHP unit, the scanner would come alive,
| which told me to slow it down a little bit ;-) Works pretty well for
| avoiding tickets, if you pay attention.(Remember those old CHiP's
detectors
| you could get out of Popular Mechanics Magazine? That's what they did. I
| remember a CHP spokesperson claiming that such a device didn't work, and
| that a radar detector was a better buy. Funny thing is the CHP hardly
uses
| radar, but always has that stupid extender on! Interesting...)
|
| -Also-

| How old is your book? The reason I ask is because the CHP is also now using
| the old 39mhz LASD frequencies. In some areas, 42 mhz is no longer used for
| normal comm's. If you have an older book, look up and add LA County's 39
| mhz frequencies to your scanner program. Or go get yourself a copy of the
| Southern California Detail edition of Police Call. It lists frequencies and
| unit numbers for the whole state, including the new 39mhz ones.

Hi

does anybody know the undocumented keypad combinations for the Bearcat
120, 220 XLT, especially the combination MAN-DATA at startup?
Some of the other Bearcat combinations e.g. SCAN+2+9 work, some not..

I'm sure they use ComSec! Don't even think about trying to decrypt it- it
can't be done.
Probably use TSSRs (Tropo Scatter Support Radios). But, probably something
newer and better.

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio and High End computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Kenwood TS-820S - Digital Ham Transceiver 160-10 meters. Looks good and works well. Comes with hand mic and SSB filter installed. $400

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $200

• Siltronix 1011C- 10 meter and CB AM or SSB Transceiver. Looks good and works well. 250-300W PEP output on SSB. $200.

• Motorola VHF Transceiver All tube Model: PA8270J SER.NO: 8697. It receives on 150.750 & 150.570 and transmits on 160.025. There is also a tone Signal and intercom control on front below speaker. This is the type transceiver that was used by police and fire dispatchers in the past.
Don't know if it works. $80

• Grubndig Model 2066 AM/FM/SW all tube receiver. Nice wood cabinet.
It isn't working. $75

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't know about transmit. Not able to test. Looks are 7/10. As is $100.

• Siltronix VFO Model 80. $75

• National Two/Seventy Ham Receiver with 6 Meter band. All Tube with matching speaker $225.

• National NC 188 Receiver. It looks good and all together, but not receiving.
On looks I would say 7/10. $60

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$100

• MFJ Rtty/CW Computer Interface Model MFJ-1224, used for copying code from the radio to your computer. $50

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $125

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $150

• Pro 62 - like new. Purchased 5-6 months ago. Still under warranty. Have original sales receipt box manual etc. It is triple conversion Hyperscan 200

channel scan covers from 30-960 MHz. $125.

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $150

• Sams CB Photofact- Several volumes, some continuos: numbers as follow: Continuos 1- 55 and 57- 65. Individual 70,72,80,88,93,98,104,120,122,128 178,190,226. Also have some two of same number. $4 each. Special discount price for all.

• AR Inc.- Stereo Amp, all solid state. $125

• Yashica Eletro 35- 35MM Camera with Telephoto 1:4 , Wide Angle 1:4 ,Tele-wide finder lense and flash attachment. $100.

I too sort of tripped over this one. However, if you search through the online help carefully, you will indeed find reference to the fact that the bandscope is not supported during SSB or CW reception. I do not know if this is a shortcoming of the radio capabilities, a conscious decision on Icom's part (what the hell could they be thinking?), or if its just a quirk in the software that they opted to document in the help system rather than fix.

FWIW, you might want to take a look at the demo of ScanCat Gold at www.scancat.com, as it may well offer enough benefits to warrant its cost. They aren't yet done with the PCR-1000 updates to it, but the demo will give you a fair feel for what is to come.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.scanner,alt.radio.scanner

I am sure Pro-CWers suggest school kids to learn abacus and
use this old obselete "mode" which requires a lot of effort for some
people instead of plug 'n play calculator.

Abacus features:

- Requires practise to use it
- Old mode. More than 1000 years old.
- Very slow.
- Inaccurate
- Can be used during the Emergency because it doesn't use any
batteries (so what ?)

If you really force school kids to learn Abacus, you must be
really silly. (don't take me wrong. I know abacus and I
sometimes use its method when I calculate something in my head.
I always complain something after I try it... I have a qualification
that qualifies 10 9-11 x 25 digits +/- calculations within 10
minutes, 20 6-7 & 6-7 x or / calculations within 10 minutes and
more...)

This is very similar to CW/No-CW debate. CW requires practise, old
mode, relatively very slow, inaccurate and "could" be (?) used during
the emergency... but if you really think CW is heaven and does
everything, you are deadend.

Be a pro-abacus and many don't care.
Be a pro-CW and many don't care.

Sheldon (VE2SHW) who works at Radio HF in Montreal provided the
excellent amateur radio interview with CBC radio across Canada (live).

>There was very little preparation, which probably is the key to emergeny

>This doesn't really answer the question about hams, because I don't know
>the situation. I realize in this situation how nice it would have been to
>have a 2m rig.

that's the thing. most of the traffics (emergency included) are
passed on 2m (or 440 repeaters...) not 30m CW or something.
You will be alone if you don't have a voice VHF rig.

Believe me. If you listened to some of the repeaters, most of the
emergency traffics are handled by no coders. (majority of VHF and
UHF rigs are owned by no coders ?)
Many coders tried to chit chat on the repeaters just like as they do
on CW or something and they were kicked off.

Visit this excellent site
why code has no importance to the amateur radio today:

1688. Signal Amplifiers

Newsgroup: rec.radio.scanner
Date: 1998-01-14 00:00:00 UTC
From: John <#629371@att.net>
Message-ID: <69ifjg$3p@bgtnsc01.worldnet.att.net>
Source record: 173923
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Since television uses 800mhz signals in the UHF range, wouldn't a signal amplifier/splitter desgined to amplify and split UHF, work for 800mhz police signals?

You can buy a TV amplifier/splitter (one lead in/four out, 20db amplification) for about $25 bucks. A unit designed especially for radio frequency transmissions runs almost double that ($49) for one lead in/two out, and 8-10db amplification...

All I want to amplify/split are 800mhz police transmissions. I assume the TV amp/splitter will take care of that - right?

Thanks for any help.

John

Except another Digital Spread Spectrum phone. The spreading sequence
in these phones is probably fixed. Only the phase of the spreading
sequence is different. If someone were to turn off the base unit and
then power up the handset, I bet it would go in to some kind of
"signal recovery" mode. I'll have to try it with mine at home...

Body handling: Binary attachment payload not displayed: vcard.vcf

Hi, probably looking for a needle in a haystack here, but I recently
aquired a set of 599D twins and need some help. Seems the transmitter
doesn't want to work.... funny thing is, I have located two more sets of
radios locally, and those transmitters don't work, either... the relays
kick and IP and HV voltage are there, the tubes are glowing, but no
dice. Same exact thing with others I found! Some bug in the radio??
seems to be a popular bug. the previous owner has had the radio 20 yrs
(in the closet) with the transmitter broken, so it apparantly broke very
early on.. what could be the problem?? Any help appreciated.
Would also be nice to have the 2m and 6m boards for the receiver,
too, if anyone has them around!
thanks,
Randy

hi from Austria,

this question is for South Florida scanner buffs:

I will be staying in Ft. Lauderdale from Jan 27
for 2 weeks. Apart from Optoelectronics, where
I will be spending lots of money (again :-) does
anybody on here know adresses of stores in the
greater Ft. Lauderdale area that specialize in
scanners and short wave receivers? (I remember
"Eli's HAM radio". Does that still exist?)

please reply to my private e-mail address rather
than to the list. -- Thanx!

regards,
Markus.

This sounds like a defective bnc connector. The older Bearcat scanners were known for that. The little pins on the outside of the connector would get rounded off and you would lose the connection of the center of the connector and your antenna. This sounds a lot like that problem.

You can get a new bnc connector at any electronics shop or even at Radio Shack. The biggest problem is removing the old connector.

I have no misunderstanding about cable losses, Ed. The ARRL book is an
excellent text. However, like many educational texts they don't factor
in products that don't meet the minimum requirements.

Cheers!

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna

Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove.net

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

The Scanner Club is the name of a bimonthly magazine published by Les Mattson. It is a successor to the Northeast Scanning News and is the official publication of The Scanner Club, a not-for-profit club organization. TSC's main strength is local frequency information, including CTCSS codes. Sample issues are $4 each. A yearly membership costs $24.95 and includes 6 issues. Write to The Scanner Club, PO Box 62, Gibbstown, NJ 08027 for more information.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the

transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation.

This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages

long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1997 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)
Radio Shack PRO-2002	R197	47K try 220K.
Radio Shack PRO-2004	R148	47K remove R148 or replace with 220K.

	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2006	R152 33K try 100K or higher.
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361

archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.
1142 N. Gilbert St.
Anaheim, CA 92801
tel. 714-991-1580

International Crystal Mfg Co.
11 N. Lee Ave

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and

feature priority scan and a separate trimmer capacitor for
each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a

flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the

microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd

electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than 70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor receivers of various brands in my collection. This article describes a few of the FM receivers in my collection, and other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews and modifications of these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC985XLT Trunktracker

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700

Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band.

Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good

internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on

vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for

each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion,

254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at www.grove.net for a review which includes quantitative test results.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered

different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate.

Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. For a quantitative test report, see "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound

Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort

memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in

early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge both Radio Shack's optional, monolithic NiCd pack, and AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned

out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?

FR2525 10 X yes yes
FR2526 10 X X yes yes
FR2527 10 X X yes yes
FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner

crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and

wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

>Is this correct, or have i got a duff set?

Don't know if this will help you but I have found that if you pause
the bandscope instead of closing it you will be able to click on the
display and it will tune to that frequency or if you use the tuner
another dotted line will appear as it moves through the frequencies
when it reaches the end simply un pause and pause again and the second
line will become the centre line, hope this helps

Warren,

May I make a few suggestions? First, I think the publishers of PopCom and MT would be surprised to see the first line. Of course, both mags cover VHF/UHF issues. I think what you are trying to say is that Scanning USA is "The ONLY magazine dedicated to the VHF/UHF Spectrum." You might consider making that change.

The ONLY monthly magazine available that covers the VHF/UHF Spectrum

At Scanning USA, we believe that the scanning hobby is a vital part of radio monitoring. Unlike what critiques have said, scanning is not dead. As a scanning pubication, Scanning USA will serve as a beacon light to help those hobbyists who wish to increase their enjoyment of the hobby.

In the paragraph above, "critiques" should probably be critics. A "critique" is a review of a product, service or other subject, such as a movie review. A critic is a person. Also, publication is misspelled. They left out the "L".

I suppose this one was aimed at me. I was just simply trying to help keeping in mind what was being looked for, and what would work with on a receiving stand point. He wanted a small diameter coax that could be used for receiving with a scanner. I suggested RG-6 because it is small diameter, cheap, readily available, and even though it is 75 ohms the mismatch would be less in a shorter run than in the same run of a 50 ohm coax with higher loss. I didn't intend to start all this, just help.

>I have no misunderstanding about cable losses, Ed. The ARRL book is an
>excellent text. However, like many educational texts they don't factor
>in products that don't meet the minimum requirements.

That's why I suggested a good catalog too, such as the Belden catalog. It
should be free at 1-800 BELDEN1 if it hasn't changed in a few years.

Also, I wasn't aiming my comments at anyone in particular, .. just in
response to the overall sense of many of the comments I saw. As of yet, no
one has done the math, or sent the formula to show why 70 ohm coax is so much
more lossy than 50 ohm coax . I will, if I don't see it soon.

WHY DOES BILL CHEEKS KEEP INSULTING PEOPLE? I WOLDN'T BUY ANYTHING
FROM SUCH A MEAN, HATEFUL PERSON.
BILL CHEEKS, WHY ARE YOU SUCH A ASSHOLE TO PEOPLE?

Get yourself a bandpass filter, since our two meter receivers are all built with front ends as wide as barn doors these days.

D.C. I. has an excellent one. AES carries it. This WILL cure your problem.

here is the scenario, local PD, does what appeared to me as digital encryption but if you listen real hard you can hear the normal audio underneath the white noise(static). does this make sense or has anyone else ever seen this. i am wondering if i record it can i pass it thru some kind of software process to filter out the white noise to hear the normal text? And yes i know the communications act of 11984 forbids decrypting encrypted transmission, but i was scanning back when the best the could do was speech inversion and i had a descrambler(later 70's), any thoughts on this one?

thanx, joe

I am brand to to scanning - I recently bought
a Uniden Bearcat BC350A scanner.

It is a factory rebuilt unit that I got off
the Uniden website for $80.

I have a question: where can I obtain the
frequencies of police/fire/air/marine etc
for San Diego?

Thanx!

-Mark Buckles
